INDUSTRY DIVISION

Owen C. Gretton, Chief

Acknowledgments

The 1967 Census of Manufactures was conducted under the direction of **Owen C. Gretton,** Chief, and **Milton Eisen,** Assistant Chief. **Elmer S. Biles,** assisted by **John S. Berube, Clifford Bennett,** and **Kenneth I. Hansen,** was responsible for the overall management of the census and was the Industry Division's liaison officer with other Divisions.

Program responsibility along industry lines was shared by the following individuals who participated importantly in the entire census program: **Robert J. Nealon,** Foods, Textiles, and Apparel; **Cyril M. Wildes,** Chemicals and Wood Products; and **Paul F. Berard,** Metals and Metal Products. **Willis K. Jordon** was responsible for preparation of the introductory text and appendix materials. **Edward A. Robinson** made significant contributions to the basic concepts and content of the census. **Donald F. Clark** and **Carl J. Bostrom,** under the direction of **Jack L. Ogus,** developed the mathematical techniques utilized in editing the data and in sampling the respondents. **Louis J. Owen,** assisted by **William R. Gray** was responsible for the inquiries relating to fuel, electric energy, and water data. **William Cooper** had staff responsibility for industry classification and the system of classifying products and materials. **Wayne M. McCaughey** and **Angela R. Daly** also participated importantly in various phases of the project.

Professional personnel in the commodity areas of the Industry Division developed the report forms for the various industries, reviewed the tabulations, and prepared the industry texts that accompanied the data. The respective areas and the individuals in charge during the census were as follows: Foods, **Charles H. W. Sedgewick** and **Carole A. Klein;** Textiles, **Evelyn O. Denny;** Apparel, **Bennie A. Daniels;** Wood Products, **Kenneth E. McBeth;** Pulp and Paper, **Lonnie M. Conner;** Chemicals, **Reese R. Morgan;** Metals, **Malcolm E. Bernhardt;** Machinery, **John P. McNamee;** and Electrical Machinery and Transportation, **Dale W. Gordon.** The names of the supporting statisticians in the commodity areas who made significant contributions are shown in the acknowledgment statements appearing in the 80 industry reports published separately prior to their assembly into the Industry Volume.

Systems and procedures were developed in the Systems Division, **Sol Dolleck,** Chief, by **Eugene Wendt** assisted by **Samuel Schweid.** Clerical procedures were developed by **Alvin Barten, Evelyn V. Williams, Carmen Taylor, Geraldine Manuel, Carl Mueller, Thomas Lowenstein,** and **Jack Margolis.** Electronic computer programs for check-in, geographic coding, and administrative records were developed and supervised by **Charles Venters** and **Terence McDowell** under the direction of **Zigmund Decker** and **Andrew Grieco. James Moyers, Gene Haggy, Paul Poissant,** and **Stephan Potemkin** developed and supervised the electronic computer editing and tabulation programs under the direction of **Mary H. Johnson.** Quality control plans and procedures were developed and supervised by **Maxwell D. Jeane,** assisted by **John Powell** and **Carl Jablin.** Data input procedures were developed and supervised by **Leonard Tauber** assisted by **Paul Blackmer.** Production controls were established under the supervision of **Francis Boucher** and **James R. Pepal.**

Processing of reports was performed in the Jeffersonville Census Operations Division, **Joseph F. Arbena,** Chief, by **James S. Werking** assisted by **Margaret Rommel** and **Jordan Horne.** Clerical processing was supervised by **Charles Adams** and quality control plans and procedures were implemented and monitored under the direction of **Kathern Clay.**

Data processing and related operations were performed by the Processing Division, **M. Douglas Fahey, Chief,** assisted by **R. M. Micoly, James Shores,** and **E. R. Bourdon.**

Report planning and editorial review were provided by **Geraldine Censky** and **Frances Bresnahan** of the Administrative and Publications Services Division.

Arthur Horowitz, in his capacity as the coordinator of the economic censuses, made important contributions to the planning and operational phases of the work. **Robert Parker** contributed in the analysis of reports for the large and complex corporate organizations. **James Corbett** developed the computer systems for disclosure analysis, assisted by **Robert Reynolds.**

Special acknowledgment is due to the many businesses whose cooperation has contributed to the publication of the data.

Preface

This is one of a series of volumes presenting the final results of the 1967 Census of Manufactures, which was part of the economic censuses covering that year. In addition to the manufacturing sector, the 1967 economic censuses included wholesale and retail trade, certain services, transportation, construction, commercial fishing, and mining. The censuses measured the activities of nearly 4,000,000 business establishments, including 300,000 engaged in manufacturing.

As in previous census years, the advice and counsel of trade and professional associations, individual companies, Federal and State agencies, labor unions, and research and educational organizations were most valuable in planning the content of the census reports. The Advisory Council on Federal Reports, comprised of representative businessmen, provided special assistance in determining the feasibility of collecting the various types of data. Other advisory committees which counsel the Census Bureau regularly contributed significantly in the planning and preparatory stages. Timely publicity was given by chambers of commerce, newspapers, trade periodicals, and television and radio stations.

As essential element in the Census of Manufactures was the excellent cooperation of the many thousands of manufacturing companies which completed the necessary census questionnaires.

	page
Preface	III
Industry Chapter Descriptions	VII
Introduction	1
Major Groups	
Furniture and Fixtures	25-1
Paper and Allied Products	26-1
Printing and Publishing	27-1
Chemicals and Allied Products	28-1
Petroleum and Coal Products	29-1
Rubber and Plastics Products, N.E.C.	30-1
Leather and Leather Products	31-1
Stone, Clay, and Glass Products	32-1
Primary Metal Products	33-1
Appendixes	
A Explanation of Terms	A-1
B Industry Descriptions	B-1
C Composition of Industries in the 1967 Standard Industrial Classification	C-1
D Census Report Forms	D-1
E Authority for Census: Title 13, United States Code	E-1
F Standard Metropolitan Statistical Areas	F-1
G Comparability of Product Classes Between the 1967 and 1963 Census of Manufactures	G-1
H Alphabetic Index of Manufactured Products	H-1

The chapters of this volume were published earlier as separate reports in the 1967 Census of Manufactures series MC67(2).

Data in this volume include all significant corrections uncovered after publication of the separate reports. The 1963 and other historical data include all significant corrections made since the latest publication of these figures.

Industry Chapter Descriptions

Chapters in this volume are coded to industries as classified in the Standard Industrial Classification (SIC) system. Pages are numbered with a chapter identification prefix; for example, the chapter on Weaving Mills in Major Group 22 will begin on page 22A–1. The list below shows the prefix identification for each chapter and the SIC industries included under each title. Chapters for each part of this volume are shown.

PART I

Major Group 20–FOOD AND KINDRED PRODUCTS

20A Meat Products
- 2011 Meat packing plants
- 2013 Sausages and other prepared meats
- 2015 Poultry dressing plants

20B Dairy Products
- 2021 Creamery butter
- 2022 Cheese, natural and processed
- 2023 Condensed and evaporated milk
- 2024 Ice cream and frozen desserts
- 2026 Fluid milk

20C Canned, Cured, and Frozen Foods
- 2031 Canned and curred seafoods
- 2032 Canned specialties
- 2033 Canned fruits and vegetables
- 2034 Dehydrated food products
- 2035 Pickles, sauces, and salad dressings
- 2036 Fresh or frozen packaged fish
- 2037 Frozen fruits and vegetables

20D Grain Mill Products
- 2041 Flour and other grain mill products
- 2042 Prepared feeds for animals and fowls
- 2043 Cereal preparations
- 2044 Rice milling
- 2045 Blended and prepared flour
- 2046 Wet corn milling

20E Bakery Products
- 2051 Bread, cake, and related products
- 2052 Cookies and crackers

20F Sugar and Confectionery Products
- 2061 Raw cane sugar
- 2062 Cane sugar refining
- 2063 Beet sugar
- 2071 Confectionery products
- 2072 Chocolate and cocoa products
- 2073 Chewing gum

20G Beverages
- 2082 Malt liquors
- 2083 Malt
- 2084 Wines, brandy, and brandy spirits
- 2085 Distilled liquor, except brandy
- 2086 Bottled and canned soft drinks
- 2087 Flavoring extracts and sirups, n.e.c.

20H Fats and Oils
- 2091 Cottonseed oil mills
- 2092 Soybean oil mills
- 2093 Vegetable oil mills, n.e.c.
- 2094 Animal and marine fats and oils
- 2096 Shortening and cooking oils

20I Miscellaneous Foods and Kindred Products
- 2095 Roasted Coffee
- 2097 Manufactured ice
- 2098 Macaroni and spaghetti
- 2099 Food preparations, n.e.c.

Major Group 21–TOBACCO MANUFACTURES

21A Tobacco Products
- 2111 Cigarettes
- 2121 Cigars
- 2131 Chewing and smoking tobacco
- 2141 Tobacco stemming and redrying

Major Group 22–TE XTILE MILL PRODUCTS

22A Weaving Mills
- 2211 Weaving mills, cotton
- 2221 Weaving mills, synthetics
- 2231 Weaving and finishing mills, wool
- 2241 Narrow fabric mills

22B Knitting Mills
- 2251 Women's hosiery, except socks
- 2252 Hosiery, n.e.c.
- 2253 Knit outerwear mills
- 2254 Knit underwear mills
- 2256 Knit fabric mills
- 2259 Knitting mills, n.e.c.

22C Dyeing and Finishing Textiles, Except Wool Fabrics and Knit Goods
- 2261 Finishing plants, cotton
- 2262 Finishing plants, synthetics
- 2269 Finishing plants, n.e.c.

22D Floor Covering Mills
- 2271 Woven carpets and rugs
- 2272 Tufted carpets and rugs
- 2279 Carpets and rugs, n.e.c.

22E Yarn and Thread Mills
- 2281 Yarn mills, except wool
- 2282 Throwing and winding mills
- 2283 Wool yarn mills
- 2284 Thread mills

22F Miscellaneous Textile Goods
- 2291 Felt goods, n.e.c.
- 2292 Lace goods
- 2293 Paddings and upholstery filling
- 2294 Processed textile waste
- 2295 Coated fabrics, not rubberized
- 2296 Tire cord and fabric
- 2297 Scouring and combing plants
- 2298 Cordage and twine
- 2299 Textile goods, n.e.c.

Major Group 23–APPAREL AND OTHER TEXTILE PRODUCTS

23A Men's and Boys' Apparel
- 2311 Men's and boys' suits and coats
- 2321 Men's and boys' shirts and nightwear
- 2322 Men's and boys' underwear
- 2323 Men's and boys' neckwear
- 2327 Men's and boys' separate trousers
- 2328 Men's and boys' work clothing
- 2329 Men's and boys' clothing, n.e.c.

23B Women's and Misses' Outerwear
- 2331 Women's and misses' blouses and waists
- 2335 Women's and misses' dresses
- 2337 Women's and misses' suits and coats
- 2339 Women's and misses' outerwear, n.e.c.

23C Women's and Children's Underwear, Headwear, Children's Outerwear
- 2341 Women's and children's underwear
- 2342 Corsets and allied garments
- 2351 Millinery
- 2352 Hats and caps, except millinery
- 2361 Children's dresses and blouses
- 2363 Children's coats and suits
- 2369 Children's outerwear, n.e.c.

23D Miscellaneous Apparel and Accessories
- 2371 Fur goods
- 2381 Fabric dress and work gloves
- 2384 Robes and dressing gowns
- 2385 Waterproof outer garments
- 2386 Leather and sheep-lined clothing
- 2387 Apparel belts
- 2389 Apparel and accessories, n.e.c.

23E Miscellaneous Fabricated Textile Products
- 2391 Curtains and draperies
- 2392 Housefurnishings, n.e.c.
- 2393 Textile bags
- 2394 Canvas products
- 2395 Pleating and stitching
- 2396 Automotive and apparel trimmings
- 2397 Schiffli machine embroideries
- 2399 Fabricated textile products, n.e.c.

Major Group 24—LUMBER AND WOOD PRODUCTS

24A Logging Camps, Sawmills, and Planing Mills
- 2411 Logging camps and logging contractors
- 2421 Sawmills and planing mills, general
- 2426 Hardwood dimension and flooring
- 2429 Special product sawmills, n.e.c.

24C Millwork, Plywood, and Prefabricated Structural Wood Products
- 2431 Millwork
- 2432 Veneer and plywood
- 2433 Prefabricated wood structures

24C Wooden Containers and Miscellaneous Wood Products
- 2441 Nailed wooden boxes and shook
- 2442 Wirebound boxes and crates
- 2443 Veneer and plywood containers
- 2445 Cooperage
- 2491 Wood preserving
- 2499 Wood products, n.e.c.

PART II

Major Group 25—FURNITURE AND FIXTURES

25A Household Furniture
- 2511 Wood household furniture
- 2512 Upholstered household furniture
- 2514 Metal household furniture
- 2515 Mattresses and bedsprings
- 2519 Household furniture, n.e.c.

25B Office, Public Building, and Miscellaneous Furniture; Office and Store Fixtures
- 2521 Wood office furniture
- 2522 Metal office furniture
- 2531 Public building furniture
- 2541 Wood partitions and fixtures
- 2542 Metal partitions and fixtures
- 2591 Venetian blinds and shades
- 2599 Furniture and fixtures, n.e.c.

Maj or Group 26—PAPER AND ALLIED PRODUCTS

26A Pulp, Paper, and Board Mills
- 2611 Pulpmills
- 2621 Papermills, except building paper
- 2631 Paperboard mills
- 2661 Building paper and board mills

26B Converted Paper and Paperboard Products, Except Containers and Boxes
- 2641 Paper coating and glazing
- 2642 Envelopes
- 2643 Bags, except textile bags
- 2644 Wallpaper
- 2645 Die-cut paper and board
- 2646 Pressed and molded pulp goods
- 2647 Sanitary paper products
- 2649 Converted paper products, n.e.c.

26C Paperboard Containers and Boxes
- 2651 Folding paperboard boxes
- 2652 Setup paperboard boxes
- 2653 Corrugated and solid fiber boxes
- 2654 Sanitary food containers
- 2655 Fiber cans, drums, and related materials

Maj or Group 27—PRINTING AND PUBLISHING

27A Newspapers, Periodicals, Books, and Miscellaneous Publishing
- 2711 Newspapers
- 2721 Periodicals
- 2731 Book publishing
- 2732 Book printing
- 2741 Miscellaneous publishing

27B Commercial Printing and Manifold Business Forms
- 2751 Commercial printing, except lithographic
- 2752 Commercial printing, lithographic
- 2753 Engraving and plate printing
- 2761 Manifold business forms

27C Greeting Cards; Bookbinding; Printing Trade Services
- 2771 Greeting card publishing
- 2782 Blankbooks and looseleaf binders
- 2789 Bookbinding and related work
- 2791 Typesetting
- 2793 Photoengraving
- 2794 Electrotyping and stereotyping

Major Group 28—CHEMICALS AND ALLIED PRODUCTS

28A Industrial Chemicals
- 2812 Alkalies and chlorine
- 2813 Industrial gases
- 2815 Cyclic intermediates and crudes
- 2816 Inorganic pigments
- 2818 Industrial organic chemicals, n.e.c.
- 2819 Industrial inorganic chemicals, n.e.c.

28B Plastics Materials, Synthetic Rubber, and Manmade Fibers
- 2821 Plastics materials and resins
- 2822 Synthetic rubber
- 2823 Cellulosic manmade fibers
- 2824 Organic fibers, noncellulosic

28C Drugs
- 2831 Biological products
- 2833 Medicinals and botanicals
- 2834 Pharmaceutical preparations

28D Soap, Cleaners, and Toilet Goods
- 2841 Soap and other detergents
- 2842 Polishes and sanitation goods
- 2843 Surface active agents
- 2844 Toilet preparations

28E Paints and Allied Products; Gum and Wood Chemicals
2851 Paints and allied products
2861 Gum and wood chemicals

28F Agricultural Chemicals
2871 Fertilizers
2872 Fertilizers, mixing only
2879 Agricultural chemicals, n.e.c.

28G Miscellaneous Chemical Products
2891 Adhesives and gelatin
2892 Explosives
2893 Printing ink
2895 Carbon black
2899 Chemical preparations, n.e.c.

Major Group 29—PETROLEUM AND COAL PRODUCTS

29A Petroleum and Coal Products
2911 Petroleum refining
2951 Paving mixtures and blocks
2952 Asphalt felts and coatings
2992 Lubricating oils and greases
2999 Petroleum and coal products, n.e.c.

Major Group 30—RUBBER AND PLASTICS PRODUCTS' N.E.C.

30A
3011 Tires and inner tubes
3021 Rubber footwear
3031 Reclaimed rubber
3069 Fabricated rubber products, n.e.c.
3079 Miscellaneous plastics products

Major Group 31—LEATHER AND LEATHER PRODUCTS

31A Tanning; Industrial Leather Goods; and Shoes
3111 Leather tanning and finishing
3121 Industrial leather belting
3131 Footwear cut stock
3141 Shoes, except rubber
3142 House slippers

31B Leather Gloves; Luggage; and Miscellaneous Leather Goods
3151 Leather gloves and mittens
3161 Luggage
3171 Women's handbags and purses
3172 Personal leather goods
3199 Leather goods, n.e.c.

Major Group 32—STONE, CLAY, AND GLASS PRODUCTS

32A Glass Products
3211 Flat glass
3221 Glass containers
3229 Pressed and blown glass, n.e.c.
3231 Products of purchased glass

32B Cement and Structural Clay Products
3241 Cement, hydraulic
3251 Brick and structural clay tile
3253 Ceramic wall and floor tile
3255 Clay refractories
3259 Structural clay products, n.e.c.

32C Pottery and Related Products
3261 Vitreous plumbing fixtures
3262 Vitreous china food utensils
3263 Fine earthenware food utensils
3264 Porcelain electrical supplies
3269 Pottery products, n.e.c.

32D Concrete, Plaster, and Cut-Stone Products
3271 Concrete block and brick
3272 Concrete products, n.e.c.
3273 Ready-mixed concrete
3274 Lime
3275 Gypsum products
3281 Cut stone and stone products

32E Abrasive, Asbestos, and Miscellaneous Nonmetallic Mineral Products
3291 Abrasive products
3292 Asbestos products
3293 Gaskets and insulations
3295 Minerals, ground or treated
3296 Mineral wool
3297 Nonclay refractories
3299 Nonmetallic mineral products, n.e.c.

Major Group 33—PRIMARY METAL INDUSTRIES

33A Blast Furnaces, Steel Works, and Rolling and Finishing Mills
3312 Blast furnaces and steel mills
3313 Electrometallurgical products
3315 Steel wire and related products
3316 Cold finishing of steel shapes
3317 Steel pipe and tubes

33B Iron and Steel Foundries
3321 Gray iron foundries
3322 Malleable iron foundries
3323 Steel foundries

33C Smelting and Refining of Nonferrous Metals and Alloys
3331 Primary copper
3332 Primary lead
3333 Primary zinc
3334 Primary aluminum
3339 Primary nonferrous metals, n.e.c.
3341 Secondary nonferrous metals

33D Nonferrous Metal Mill and Foundry Products
3351 Copper rolling and drawing
3352 Aluminum rolling and drawing
3356 Nonferrous rolling and drawing, n.e.c.
3357 Nonferrous wiredrawing and insulating
3361 Aluminum castings
3362 Brass, bronze, and copper castings
3369 Nonferrous castings, n.e.c.

33E Forgings and Miscellaneous Primary Products
3391 Iron and steel forgings
3392 Nonferrous forgings
3399 Primary metal products, n.e.c.

PART III

Major Group 34—FABRICATED METAL PRODUCTS

34A Metal Cans, Cutlery, Handtools, and General Hardware
3411 Metal cans
3421 Cutlery
3423 Hand and edge tools, n.e.c.
3425 Handsaws and saw blades
3429 Hardware, n.e.c.

34B Heating Apparatus (Except Electric) and Plumbing Fixtures
3431 Meatal sanitary ware
3432 Plumbing fittings and brass goods
3433 Heating equipment, except electric

34C Fabricated Structural Metal Products
3441 Fabricated Structural steel
3442 Metal doors, sash, and trim
3443 Fabricated plate work (boiler shops)
3444 Sheet metalwork
3446 Architectural metalwork
3449 Miscellaneous metalwork

34D Screw Machine Products, Fasteners and Washers; Metal Stampings; and Metal Serivces
3451 Screw machine products
3452 Bolts, nuts, rivets, and washers
3461 Metal stampings
3471 Plating and polishing
3479 Metal coating and allied services

34E Miscellaneous Metal Products
- 3481 Miscellaneous fabricated wire products
- 3491 Metal barrels, drums, and pails
- 3492 Safes and vaults
- 3493 Steel springs
- 3494 Valves and pipe fittings
- 3496 Collapsible tubes
- 3497 Metal foil and leaf
- 3498 Fabricated pipe and fittings
- 3499 Fabricated metal products, n.e.c.

Major Group 35—MACHINERY, EXCEPT ELECTRICAL

35A Engines and Turbines and Farm Machinery and Equipment
- 3511 Steam engines and turbines
- 3519 Internal combustion engines, n.e.c.
- 3522 Farm machinery

35B Construction, Mining, and Materials Handling Machinery and Equipment
- 3531 Construction machinery
- 3532 Mining machinery
- 3533 Oilfield machinery
- 3534 Elevators and moving stairways
- 3535 Conveyors and conveying equipment
- 3536 Hoists, cranes, and monorails
- 3537 Industrial trucks and tractors

35C Metalworking Machinery and Equipment
- 3541 Machine tools, metal-cutting types
- 3542 Machine tools, metal-forming types
- 3544 Special dies, tools, jigs, and fixtures
- 3545 Machine tool accessories
- 3548 Metalworking machinery, n.e.c.

35D Special Industry Machinery, Except Metalworking Machinery
- 3551 Food products machinery
- 3552 Textile machinery
- 3553 Woodworking machinery
- 3554 Paper industries machinery
- 3555 Printing trades machinery
- 3559 Special industry machinery, n.e.c.

35E General Industrial Machinery and Equipment
- 3561 Pumps and compressors
- 3562 Ball and roller bearings
- 3564 Blowers and fans
- 3565 Industrial patterns
- 3566 Power transmission equipment
- 3567 Industrial furnaces and ovens
- 3569 General industry machinery, n.e.c.

35F Office, Computing, and Accounting Machines
- 3572 Typewriters
- 3573 Electronic computing equipment
- 3574 Calculating and accounting machines
- 3576 Scales and balances
- 3579 Office machines, n.e.c.

35G Service Industry Machines and Machine Shops
- 3581 Automatic merchandising machines
- 3582 Commercial laundry equipment
- 3585 Refrigeration machinery
- 3586 Measuring and dispensing pumps
- 3589 Service industry machines, n.e.c.
- 3599 Miscellaneous machinery, except electrical

Major Group 36—ELECTRICAL EQUIPMENT AND SUPPLIES

36A Electrical Measurement and Distribution Equipment
- 3611 Electric measuring instruments
- 3612 Transformers
- 3613 Switchgear and switchboard apparatus
- 3621 Motors and generators
- 3622 Industrial controls
- 3623 Welding apparatus
- 3624 Carbon and graphite products
- 3629 Electrical industrial apparatus, n.e.c.

36B Household Appliances
- 3631 Household cooking equipment
- 3632 Household refrigerators and freezers
- 3633 Household laundry equipment
- 3634 Electric housewares and fans
- 3635 Household vacuum cleaners
- 3636 Sewing machines
- 3639 Household appliances, n.e.c.

36C Electric Lighting and Wiring Equipment
- 3641 Electric lamps
- 3642 Lighting fixtures
- 3643 Current-carrying wiring devices
- 3644 Noncurrent-carrying wiring devices

36D Communication Equipment, Including Radio and TV, and Electronic Components and Accessories
- 3651 Radio and TV receiving sets
- 3652 Phonograph records
- 3661 Telephone and telegraph apparatus
- 3662 Radio and TV communication equipment
- 3671 Electron tubes, receiving type
- 3672 Cathode ray picture tubes
- 3673 Electron tubes, transmitting
- 3674 Semiconductors
- 3679 Electronic components, n.e.c.

36E Miscellaneous Electrical Equipment and Supplies
- 3691 Storage batteries
- 3692 Primary batteries, dry and wet
- 3693 X-ray apparatus and tubes
- 3694 Engine electrical equipment
- 3699 Electrical equipment, n.e.c.

Major Group 37—TRANSPORTATION EQUIPMENT

37A Motor Vehicles and Equipment
- 3711 Motor vehicles
- 3712 Passenger car bodies
- 3713 Truck and bus bodies
- 3714 Motor vehicle parts and accessories
- 3715 Truck trailers

37B Aircraft and Parts
- 3721 Aircraft
- 3722 Aircrafr engines and engine parts
- 3723 Aircraft propellers and parts
- 3729 Aircraft equipment, n.e.c.

37C Ship and Boat Building, Railroad and Miscellaneous Transportation Equipment
- 3731 Ship building and repairing
- 3732 Boat building and repairing
- 3741 Locomotives and parts
- 3742 Railroad and street cars
- 3751 Motorcycles, bicycles, and parts
- 3791 Trailer coaches
- 3799 Transportation equipment, n.e.c.

Major Group 38—INSTRUMENTS AND RELATED PRODUCTS

38A Instruments; Surgical, Dental, and Ophthalmic Equipment and Supplies
- 3811 Engineering and scientific instruments
- 3821 Mechanical measuring devices
- 3822 Automatic temperature controls
- 3831 Optical instruments and lenses
- 3841 Surgical and medical instruments
- 3842 Surgical appliances and supplies
- 3843 Dental equipment and supplies
- 3851 Ophthalmic goods

38B Photographic Equipment; Clocks, Watches, and Watchcases
- 3861 Photographic equipment and supplies
- 3871 Watches and clocks
- 3872 Watchcases

Major Group 39—MISCELLANEOUS MANUFACTURING INDUSTRIES

39A Jewelry, Silverware, and Plated Ware
- 3911 Jewelry, precious metal
- 3912 Jewelers' findings and materials
- 3913 Lapidary work
- 3914 Silverware and plated ware

39B Musical Instruments and Parts; Toys and Sporting Goods
- 3931 Musical instruments and parts
- 3941 Games and toys
- 3942 Dolls
- 3943 Children's vehicles, except bicycles
- 3949 Sporting and athletic goods, n.e.c.

39C Office Supplies, Costume Jewelry, and Notions
- 3951 Pens and mechanical pencils
- 3952 Lead pencils and art goods
- 3953 Marking devices
- 3955 Carbon paper and inked ribbons
- 3961 Costume jewelry
- 3962 Artificial flowers
- 3963 Buttons
- 3964 Needles, pins, and fasteners

39D Miscellaneous Manufactures
- 3991 Brooms and brushes
- 3993 Signs and advertising displays
- 3994 Morticians' goods
- 3996 Hard-surface floor coverings
- 3999 Manufactures, n.e.c.

Major Group 19—ORDNANCE AND ACCESSORIES

19A Ordnance and Accessories
- 1911 Guns, howitzers, and mortars
- 1925 Complete guided missiles
- 1929 Ammunition, except for small arms, n.e.c.
- 1931 Tanks and tank components
- 1941 Sighting and fire control equipment
- 1951 Small arms
- 1961 Small arms ammunition
- 1999 Ordnance and accessories, n.e.c.

I. GENERAL BACKGROUND

1. THE ECONOMIC CENSUSES

General.—The economic censuses provide a comprehensive statistical profile of a large segment of the national economy. In 1967, these censuses accounted for nearly 70 percent of the $555 billion of national income originating in the private sector. The principal industry groups not covered were finance, insurance, and real estate; agriculture and forestry; communications; and electric, gas, and sanitary services.

Uses and Users of Census Data.—The economic censuses are the primary source of facts about the structure and functioning of the economy and therefore provide information essential both for government and business. They furnish an important part of the framework for such composite measures as the national accounts. The census measures also provide weights and serve as benchmarks for current surveys of industrial activity and for indexes of industrial production, productivity, and price, all of which are essential in developing the general background for understanding particular economic situations.

There is widespread use of the economic censuses by manufacturers and distributors who need to establish measures of their potential markets in terms of areas, kinds of business, and kinds of products; and by management in various industries and trades which need facts for purposes of economic or sales forecasting, for analysis of sales performance, for the layout of sales territories, for the allocation of advertising budgets, and for the location of plants, warehouses, and stores. For these business purposes, census facts are invaluable. Likewise, trade and professional associations need census information to learn how their industry is changing; chambers of commerce need to know how their community is changing. State and local governments need to understand the business structure and changes occurring in their areas. Business magazines rely on census facts as background for many of their articles.

Following every census, reports are purchased by thousands of business and other users; likewise, census facts are widely disseminated by trade associations, business journals, and the daily press; census volumes are available in all the major public and college libraries.

History.—The first statistical survey which can be called an economic census covered the year 1809, when inquiries on manufacturing were included with the 1810 census of population. Although the results of this pioneer effort were unsatisfactory by modern standards,[1] continued interest in measurement of the Nation's economic progress led to successive improvements during the 19th century. By 1890, the statistical standards and procedures followed in conducting the censuses were of a fully professional quality.

All of the decennial censuses from 1810 through 1940, with the exception of 1830, included questions on manufacturing. Inquiries on mining first appeared in 1840, and censuses of mineral industries were conducted decennially through 1940. Although some business-related data were collected in 1840, the first census of business was taken for the year 1929. This included retail trade, wholesale trade, and construction: selected service trades were covered beginning with 1933. Dates of these and other economic censuses from 1809 are shown in table A.

Enterprise Statistics.—The coordinated collection and tabulation of comparable data for several sectors beginning with 1954 has permitted the Census Bureau to develop its enterprise statistics program, which relates census company-level data to the establishment data. Thus, a measurement of the integration and diversification of the American enterprise system becomes available. Also, through the enterprise statistics program, it has become possible to link census establishment-based data on a modified basis to other statistical systems such as the Internal Revenue Service's "Statistics of Income" for corporations.

Legal Provisions.—Title 13 of the United States Code specifies the frequency of the censuses, the kinds of activities to be covered, the obligation to report, the penalties for failure to report, and the confidentiality of returns. It also authorizes the use of sampling techniques in conducting censuses. As amended

[1] For an appraisal of early censuses of manufacturing, see Meyer H. Fishbein, *The Censuses of Manufactures 1810-1890.* National Archives Publication No. 63-22, June 1963. Government Printing Office.

in 1964, Title 13 requires the economic censuses to be taken at 5-year intervals, covering the years ending in "2" and "7." The next censuses will cover the year 1972. The pertinent portions of Title 13 are quoted in appendix E.

2. CHARACTERISTICS OF THE INDUSTRIAL SECTOR

General.—In terms of the major industry divisions established in the national accounts, manufacturing is the largest sector of the economy. In 1967, manufacturing plants employed 19 million persons, 26 percent of the civilian labor force of 74 million. Over the past 20 years, as shown in table B, national income originating in manufacturing has averaged 30 percent of the total. The next largest sector, wholesale and retail trade, declined from 19 percent in 1947 to 15 percent in 1967.

Cyclical Changes.—The need for frequent and comprehensive statistics on manufacturing derives as much from its sensitivity to cyclical influences as from its relative size. Cyclical changes in income originating in manufacturing tend to be relatively larger than in the economy as a whole.

Within manufacturing, durable goods industries accounted for about 58 percent of all manufactures during recent periods. This category tends to be more volatile than nondurable goods, generally accounting for a smaller percentage of all manufactures during periods of contraction and a larger percentage during periods of expansion. In the early thirties, for example, as shown in table C, durable goods manufacturing amounted to only about one-third of the total.

Geographic Distribution.—In the 19th century, manufacturing activity was concentrated in the Northeast. Over the past hundred and twenty years, as shown in table D, there has been a steady decline in the proportion accounted for by the Northeastern States, and a marked growth in the South and West.

TABLE B. National Income by Industry Division for Selected Years

Industry	1929	1939	1947	1954	1958	1963	1967
	Billions of dollars						
All industry divisions, total	86.8	72.6	199.0	303.1	367.8	481.9	653.3
Manufacturing	21.9	18.1	59.5	94.6	107.8	143.8	195.2

Size Distribution.—While there are many small manufacturing plants, they account for a relatively small part of the total output of goods. As shown in table E, over half of the plants covered in the 1967 census had less than 10 employess but they accounted for less than 3 percent of the total value added by manufacture.

3. ROLE OF THE CENSUS OF MANUFACTURES

In the farm-oriented economy of the 19th century, industrial statistics played a relatively small role in government policy formation. A few series on physical output of commodities originated either from private sources (flour, iron, and steel, etc.) or as a byproduct of tax collection or other government functions (liquors, beer, tobacco products, etc.). Other than these, the only sources of information on the manufacturing sector were the censuses of manufactures, then taken at 10-year intervals. Today, the need for industrial statistics has greatly increased, and the user finds a vast array of detailed information covering virtually every measurable aspect of industrial activity including employment, payrolls, hours worked, production, prices, inventories, orders, investment in structures, machinery, and equipment, and consumption of raw materials, fuels, and water. Many of these statistics are available at frequent intervals and on a timely basis. Sophisticated indicators of economic progress have also been developed such as price and production indexes, gross national product, and national income, published at monthly or quarterly intervals.

In this setting, the census of manufactures still plays an essential role since no other source provides such comprehensive and detailed information on the structure of the industrial sector. In effect, the census obtains, for every manufacturing plant with one employee or more, data on its input of labor, materials, and capital, its output of products and services, its location, and the legal form of organization of the owning firm.[2] These facts are obtained in sufficient detail to permit classification by industry, by size of plant, by homogeneity of output and, where desirable, by type of operation, extent of vertical integration, kind of equipment, relationship to other plants of the same firm, and other characteristics.

[2] For 1967, some of this information for 120,000 small companies was not obtained directly but estimated from administrative records. See the discussion of coverage of establishments in sections 4 and 6 below.

TABLE C. Total National Income and Amounts Originating in Durable and Nondurable Manufactures for Selected Years

(Dollar values in billions)

Year	National income	National income originating in manufacturing			Manufacturing as a percent of national income	Durable goods industries as a percent of total manufacturing
		Total	Nondurable goods industries	Durable goods industries		
1967	653.6	195.2	75.5	119.7	30	61
1966	620.6	191.5	72.9	118.5	31	62
1965	564.3	172.6	66.5	106.1	31	61
1964	518.1	155.6	61.9	93.6	30	60
1963	481.9	143.8	57.5	86.3	30	60
1962	457.7	137.0	55.6	81.4	30	59
1961	427.3	125.1	52.8	72.3	29	58
1960	414.5	125.8	52.2	73.6	30	59
1959	400.0	124.0	51.1	72.9	31	59

General statistics (that is, total employment, payroll, production-worker employment, man-hours, wages, cost of materials, value of shipments, inventories, capital expenditures, and value added by manufacture) from the census of manufactures are published by industry, by area, by employment size of establishment, by degree of product specialization within plant, and by type of ownership. Information is supplied on the detailed industrial characteristics of each State and large standard metropolitan statistical area (SMSA); and overall measures of manufacturing activity are shown at the county and individual city level down to cities of 10,000 or more population. The compilation entitled "Location of Manufacturing Plants" shows, for each of the 3,100 counties in the United States, the number of manufacturing plants, by size, for each of 420 industries. Information such as this constitutes a periodic inventory of the Nation's manufacturing economy that provides a benchmark for measuring the changes in its structure.

The census of manufactures also provides benchmarks from which more frequent surveys can be developed on a sample basis. In fact, the present legislation specifying that censuses be conducted every 5 years authorizes an Annual Survey of Manufactures (ASM) on a sample basis during the intervening years. After each 5-year census, a new sample is drawn utilizing the characteristics recorded for each company in the census. The sample, constituting about one-fifth of the establishments but with complete coverage of all large ones, provides an annual updating of the census of manufactures in terms of broad measures of economic activity. It provides the same basic measures of economic activity of the plant such as employment, payrolls, value of shipments, value added by manufacture, as does the census of manufactures, but contains less detailed information on products, materials consumption, and equipment.[3]

The census of manufactures not only is a benchmark for many of the surveys conducted by the Census Bureau itself on a more frequent basis but also is the means of updating other indicators of economic activity. It provides very important information on the manufacturing segment used in the national income accounts. Census data on materials consumed and product output are basic to the manufactures sector of the input-output studies of the Office of Business Economics. The information derived from the census of manufactures is also used to develop indexes of industrial production for census years. These indexes are used as benchmarks for the monthly Federal Reserve Board Index of Industrial Production—a key indicator of

[3]Since the ASM is based on a sample, the cross-classifications by industry and by area are fewer than in the census of manufactures. At the U.S. level, statistics are published in the annual survey for practically all of the 420 industries. However, at the State and SMSA levels, statistics are published only for 3-digit and 2-digit industry groupings, respectively. At the county level, information is published for about 10 percent of the 3,100 counties. These 300-odd counties are the larger ones in terms of manufacturing activity and account for about 80 percent of total manufacturing employment. No information is published at the city level.

TABLE D. Employment in Manufacturing Establishments, by Region: 1849 to 1967

Year	United States	Northeast	North Central	South	West
	Number of employees (thousands)				
1967.....	18,492	5,573	6,059	4,553	2,305
1963.....	16,235	5,190	5,239	3,780	2,025
1958.....	15,423	5,242	5,017	3,382	1,779
1947.....	14,294	5,429	5,109	2,710	1,054
1939.....	9,527	3,879	3,184	1,852	612
1929.....	10,198	4,246	3,516	1,758	675
1899.....	5,077	2,629	1,474	793	181
1849.....	957	696	110	146	4
	Percent of U.S. total				
1967.....	100	30	33	25	12
1963.....	100	32	32	23	13
1958.....	100	34	33	22	12

1939.....	100	41	34	20	6
1929.....	100	42	35	17	7
1899.....	100	52	29	16	4
1849.....	100	73	12	15	-

Source: Census of Manufactures.

Note: Detail may not add to totals because of independent rounding. 1849 data include hand and neighborhood industries, which were excluded from the censuses of manufactures beginning with 1899.

TABLE E. Cumulative Percentage of Number of Manufacturing Establishments and Value Added by Manufacture, by Size Class of Establishment: 1967

Size class	Number of establishments	Value added by manufacture
1 to 4 employees.....	38.4	1.1
1 to 9 employees.....	51.3	2.3
1 to 19 employees.....	64.9	5.1
1 to 49 employees.....	80.9	12.1
1 to 99 employees.....	89.0	20.0
1 to 249 employees.....	95.5	34.9
1 to 499 employees.....	98.0	48.7
1 to 999 employees.....	99.2	62.0
1 to 2,499 employees.....	99.7	77.0
All establishments, total...	100.0	100.0

current economic activity. The census and ASM also provide benchmarks for hundreds of monthly and quarterly surveys of commodity output conducted by the Census Bureau, other government agencies, and by manufacturers' associations.

4. INDUSTRY AND PRODUCT CLASSIFICATION

Structure of the Standard Industrial Classification.—The basic classification system employed in the economic censuses is the Standard Industrial Classification (SIC). The SIC was developed for use in the classification of establishments by type of activity in which engaged. It covers the entire field of economic activities, subdivided as follows:

Industrial division	Title	Major groups
A	Agriculture, forestry, and fisheries	01-09
B	Mining	10-14
C	Contract construction	15-17
D	Manufacturing	19-39
E	Transportation, communication, electric, gas, and sanitary services	40-49
F	Wholesale and retail trade	50-59
G	Finance, insurance, and real estate	60-67
H	Services	70-89
I	Government	91-94
J	Nonclassifiable establishments	99

Below the major group level, the SIC provides for 3-digit groups and finally for 4-digit industries. To illustrate—

Division D.—Manufacturing

Major Group 20 ..... Food and kindred products
Industry group 202 ..... Dairy products
Industry 2023 ..... Condensed and evaporated milk

The SIC is the responsibility of an intragovernmental technical committee headed by the Office of Management and Budget (formerly Bureau of the Budget). The system is used by all Federal Government agencies engaged in the classification of establishments. To facilitate comparison with Federal statistics and the filing of reports, many state and local governments and business concerns organize their own records along SIC lines.

The first SIC manual was issued in 1939. For the manufacturing sector, the nucleus of the manual was the census of manufactures industry classifications developed over a period of many years.[4]

Structure of the SIC Manufacturing Division.—For the manufacturing division, the 21 2-digit SIC Major Groups (19 to 39) are subdivided into 149 3-digit SIC Groups (191 to 399) and into 422 4-digit industries (1911 to 3999). While the SIC contains 422 industries, the Bureau of the Census has combined two small industries with others for a total of 420 industries.

Most of the 422 manufacturing industries are defined in terms of a specific group of related products. Usually, the products are made of similar materials and by similar processes, and are competitive. In determining the boundaries of product-

[4] For the manufacturing industries, a revised manual was issued in 1945 which, with minor modifications, was used in the 1947 census of manufactures. For the 1954 census, the classification structure used in 1947 was again employed, again with minor modifications. In 1957, the SIC system was extensively revised for manufacturing industries and historical comparability of some data was seriously affected. This revision and its effects on census series are described in the introduction and appendixes to the 1958 census volumes. Minor revisions of the SIC between 1958 and 1967 introduced some 4-digit industry changes but none of them crossed 3-digit group lines. Another extensive revision of the SIC, now under way, is scheduled to be effective with 1972.

defined industries,[5] it is essential that each industry comprise a group of establishments whose output of products defining the industry (primary products) accounts for a relatively high proportion of the total shipments of the industry as well as of the total shipments of these primary products by establishments in all manufacturing industries. Some industries are defined in terms of the processes or equipment used regardless of the final product of the establishment. A small number of industries are basically defined by material used as well as final product of the plant.

There are wide differences among industries in the extent to which the establishments classified in the industry (a) account for the total production of commodities "primary" to the industry, (b) produce products or services "belonging" to other industries (that is, secondary products), and (c) use similar materials or processes. While these variations are frequently construed to be shortcomings, the fact is that the limitations observed in the classification structure arise from the inherent complexity of our economic system and from the disparity in the methods of production among the individual producing units of which it is comprised. The data collected in the census of manufactures provide a statistical basis for a critical evaluation of the classification system; that is, for assessing the boundaries between industries, the growth and decline of industries, and the impact of technological change on the classification of industries.[6]

No general-purpose system of industrial classification can hope to satisfy all users of census data. Some business users will be interested primarily in data relating only to themselves and to their competitors in the production of a narrow range of products; others will wish data relating to all products, including complementary and substitutable products, competing in a particular market; others may wish data relating to the consumers of one or more types of materials. Some may be interested only in the data for plants producing a specific product; others only for those plants producing a "full line" of products. The large number of SIC industries provides the analyst with the "building blocks" for obtaining useful approximations, if not "clean" data, relevant to many of these problems. But, at best, a single general-purpose system of classification can only partially satisfy these diverse needs; a point is soon reached beyond which the adaptation of a system to serve one use somewhat better will reduce its ability, often disproportionately, to serve an alternative use.

Accordingly, users of data frequently regroup detailed SIC industries into broad groupings along lines different from those in the SIC 2- and 3-digit categories. The Federal Reserve Board for many years has made combinations to stress such criteria as durable, nondurable, consumers, producers, finished, intermediate goods, etc. Other public and private agencies also recombine the detailed classes. By and large, the 4-digit industries are susceptible to allocation to such categories, while the 2-digit SIC groups are not.

Subindustries.—To increase the usefulness or improve the editing of the data, the Census Bureau frequently has further classified the basic 4-digit SIC industries into "subindustries." This device is employed where there are wide disparities in the operating ratios of the plants in the industry because of differences among plants in the degree of vertical integration, technology, methods of distribution, geographic location, types of materials used, etc. This technique was used for about 65 manufacturing industries for editing purposes and many were regarded as significant enough to be used for publication: For example, the bakery industry (SIC 2051) is subdivided into wholesale bakeries, chain-store bakeries, home-service bakeries, and retail multi-outlet bakeries and many apparel industries (Group 23) are subclassified into manufacturers, contractors, and jobbers.

To provide a further measurement of variations within 4-digit industries, the Bureau also subclassifies establishments by the degree to which they produce the primary products or specific classes of primary products of the 4-digit industry. This is in effect a subindustry classification based on degree of product specialization which is published in table 8 of the industry chapters.

Definition of Manufacturing.—As defined in the SIC, manufacturing is the mechanical or chemical transformation of inorganic or organic substances into new products. The assembly of component parts of products is also considered to be manufacturing if the resulting product is neither a structure nor other fixed improvement. These activities are usually carried on in plants, factories, or mills, which characteristically use power-driven machines and materials-handling equipment.

Manufacturing production is usually carried on for the wholesale market, for transfer to other plants of the same company, or to the order of industrial users rather than for direct sale to the household consumer. However, some manufacturers (for example, baking, milk bottling, etc.) sell chiefly at retail to household consumers through the mail, through house-to-house routes, or through salesmen. Some activities of a service nature (enameling, binding, platemaking, etc.) are included in manufacturing when they are performed primarily for trade; but they are considered nonmanufacturing when they are performed primarily to the order of the household consumer. On the other hand, some manufacturing industries include business firms which perform only the entrepreneurial functions of buying the materials and designing and marketing the product, but have the actual production done on contract (for example, apparel jobbers).

Auxiliary Units.—In addition to the production of goods and manufacturing services, manufacturing plants engage in related and diverse supporting activities. These activities encompass the acquisition of materials to be processed, their movement into the manufacturing facility, their storage at the manufacturing site, the operation and maintenance of plant and equipment, the design of flow of work through the production process, and necessary arrangements for shipment of output to customers. Also included are a host of subsidiary activities associated with the operation of the establishment as a manufacturing entity (for example, management and policy formation, product and market orientation, engineering and quality control, recordkeeping and accounting, physical security of plant and equipment, and the like). Such subsidiary activities may be performed by personnel located at the manufacturing facility or at an auxiliary unit serving one or more manufacturing locations of the same company. Where these activities are carried on at a different physical location or are performed for more than one plant, they are excluded from the figures for operating manufacturing establishments and are included in the data shown for central administrative offices and auxiliaries. (See the description of the questionnaire used for these establishments, Form NC-X6, in section 7, below.)

---

[5] Frequently, business analysts and other data users look at a group of products from more than one point of view. For example, modern high-speed computers are classified as office machines. This describes the purpose of the product. In a physical sense, however, such computers would be described as electronic devices. Similarly, paper bags, wooden boxes, glass bottles, tin cans, and steel barrels may all be classified as containers or they may be individually grouped with other products of similar materials such as converted paper products, wood products, glass products, etc.

[6] See *Industry Classification and Sector Measures of Industrial Production* by James W. McKie, Bureau of the Census Working Paper No. 20, 1965, and *Historical Comparability of Census of Manufactures Industries, 1929-1958* by Harold T. Goldstein, Bureau of the Census Working Paper No. 9, 1959.

Marginal Activities.—The following types of activities, while having some of the characteristics usually found in manufacturing, are considered as nonmanufacturing and, therefore, are excluded from the census:

(a) Processing on farms when the raw materials are grown on the farm and the manufacturing activities (poultry dressing, milk and butter production, logging) are on a small scale without extensive use of paid labor. Also custom milling, cotton ginning, egg hatching, and similar activities closely associated with agriculture are excluded.

(b) Mineral preparation such as the crushing, screening, and concentrating of ores. However, mining performed as a secondary activity in conjunction with manufacturing is included in the census unless a separate report for the mining activity was filed; for example, stone and clay mining at cement, lime, and clay products plants.

(c) Custom work to the individual order of household consumers. Examples are custom tailoring, woodworking, lettering on monuments, setting of diamonds, and the making of orthopedic appliances.

(d) Repair and other service activities, except specified services performed "for the trade." Repair shops of railroads are also excluded.

(e) Production of coke for own use by establishments owned by public utility companies.

In the 1967 census, no attempt was made to measure the extent of manufacturing at locations which are not primarily manufacturing plants, such as retail establishments which sell most of their products on the premises directly to household consumers (retail bakeries,[7] ice cream stores, etc.), or manufacturing by construction contractors at the site (for example, production of paving mixtures).

Conversely, it is not unusual for manufacturing establishments to engage also in nonmanufacturing activities such as repair work, merchandising of products without further processing, and installation work. Ordinarily, these nonmanufacturing receipts are small in relation to the manufacturing activities and, therefore, it is not difficult to determine that the establishments should be included in the manufactures area. However, if the nonmanufacturing activities account for a significant proportion of total receipts of an establishment, the classification of that establishment into the appropriate major economic sector is more difficult.

In the 1967 economic censuses, an establishment engaged in a combination of manufacturing and merchandising was assigned either to the manufacturing or the trade industries depending on which of these activities was estimated to account for the larger share of its "value added" or "income produced." This criterion, even though based on approximation, was considered preferable to reported dollar volume of receipts from each type of activity in determining the primary industry, since manufacturing requires considerably more man-hours, salaries and wages, and capital inputs per dollar of receipts than either wholesaling or retailing. However, in classifying establishments engaged in manufacturing and also in mining, repair work, installation, construction, or other nonmanufacturing services, dollar receipts were used as the basis of classification because these activities require substantially comparable input per dollar of receipts.

Establishment Basis of Reporting.—The SIC is an establishment classification system, and the census of manufactures is conducted on an establishment basis. That is, a company operating establishments at more than one location is required to submit a report for each location; also, a company engaged in distinctly different lines of activity at one location is required to submit separate reports if the plant records permit such a separation and if the activities are substantial in size.

The requirement that distinct lines of activity at the same location be separately reported was selectively applied where the establishment produced and shipped significant amounts of products classified in different SIC industries. In widely varying degrees, this product overlap exists in many manufacturing establishments. Generally, the amounts involved are not significant enough to warrant the filing of separate reports, even if feasible. However, there are a number of locations at which large numbers of employees are engaged in each of two or more distinct lines of manufacturing as defined in the SIC. Frequently, companies organize their operations and their records separately where diverse activities are large (for example, with more than 100 employees in each line of activity) and choose to report them as separate plants. When they do not do so on their own initiative, the Census Bureau requests separate reports. For the most part, companies have responded favorably, particularly for very large operations where failure to "split out" the different activities would significantly distort the relationship of the industry and product statistics. Not infrequently, though, the two groups of products were made on the same production lines by many of the same employees and could not be distinguished sufficiently in company records to provide establishment-type reporting.

SIC industry defintions take account of special situations where otherwise separately classifiable activities are frequently combined at one location. For example, in the lumber area the definition of industry 2421, Sawmills and Planing Mills, General, recognizes the situation that sawmills may include logging operations. Similarly, in the pulp and paper area, pulpmills operated in combination with papermills are included in one report.

Coverage of Establishments.—The censuses of manufactures for 1947 to date have included establishments with one employee or more. In the 1967 census, for the first time, reports were not obtained directly from all such establishments. Approximately 120,000 small manufacturing firms[8] were excused from filing reports; under special arrangements which safeguarded the confidentiality of both tax and census records, limited data on payrolls, sales, and industry classification from the administrative records of the Social Security Administration (SSA) and the Internal Revenue Service (IRS) were made available to the Census Bureau for use in the 1967 economic censuses. Estimates for data other than payrolls and sales for these small establishments were constructed from historical industry ratios. The effect on industry aggregates is slight in most industries; for manufacturing as a whole, they account for only 1.2 percent of the value added. Detailed product and materials data for these small establishments were not estimated; the entire value of product shipments and cost of materials was imputed to a "not specified by kind" category.

In the censuses of 1921 through 1939, establishments with less than $5,000 value of products were excluded. For 1899 to 1919, the limit was $500. The change in the minimum size limit to an employment basis in 1947 did not appreciably affect the overall comparability of earlier census figures, except for the number of establishments.[9]

[7] Separate data for retail bakeries with baking on the premises were included in the retail census publications, however.

[8] The characteristics of these firms are discussed below in section 15.

[9] This point is discussed at greater length in the Introduction to the 1947 volumes.

A sample survey of manufacturing plants with no paid employees was conducted in conjunction with the 1958 census. While there were nearly 52,000 establishments in this category in that year, they accounted for only about one-quarter of 1 percent of the total value of shipments of all manufacturing industries. The proportion was higher for certain industry groups such as lumber and wood products and printing and publishing.

As indicated above, report forms were not mailed to 120,000 very small establishments. These establishments were assigned the industry classifications to which they had been coded in the 1963 Census of Manufactures, or if they had begun in business after 1963, on the basis of brief descriptions of the general activity of the establishment as reported to the Social Security Administration. Where the description is incomplete or there are relatively fine lines of demarcation between industries or between manufacturing and nonmanufacturing activity, the code assigned to an establishment could differ from that which would have been assigned on the basis of more complete product information. Therefore, the total establishment count should be viewed as an approximation rather than a precise measurement. The counts for establishments with 20 or more employees are far more reliable than the total number of establishments.

Primary and Secondary Products.—As applied in the economic censuses, the SIC coding system operates in such a way that the definitions become progressively narrower with successive additions of numerical digits. At one extreme are the 21 very broad 2-digit groups and at the other about 10,500 individual 7-digit products. In between are approximately 150 3-digit groups, 420 4-digit industries, and 1,200 5-digit product classes. The 7-digit products and 5-digit product classes are considered the primary products of the industry with the same first four digits as the product code. Accordingly, an establishment is classified in a particular industry if its production of the primary products of that industry exceeds in value its production of products of any other single industry. The industry code assigned to the establishment is derived from a summation of values for 7-digit product codes to their 4-digit industry and the selection of the largest such value as the establishment's industry classification. However as mentioned earlier, the industry classification of an establishment may be determined not only by the products it makes but also by the processes employed or materials used in making those products.

While some establishments produce only the primary products of the industry in which they are classified, it rarely happens that all the establishments in an industry specialize to this extent. Therefore, the general statistics (employment, payrolls, inventories, value added by manufacture, total value of shipments, capital expenditures, etc.) shown for an industry (tables 1 to 4 of the industry chapters in Volume II) reflect not only the primary activities of the establishments in that industry but also their activities of a secondary nature. The product statistics in table 6 of the industry chapters represent the total output of specific products whether they are produced by establishments classified in the same industry as the product or not. For this reason, in relating the industry statistics in the industry chapters, especially the industry total value of shipments (tables 1 to 4), to the product statistics (table 6), the composition of the industry's output as shown in tables 5A and 5B should be considered.

The extent to which industry and product statistics may be matched with each other is measured by the two ratios which are computed from tables 5A and 5B. The first of the ratios, called the primary product specialization ratio, describes the proportion of product shipments ,(both primary and secondary) of the industry represented by primary products. The second, defined as the coverage ratio, is the proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

Degrees of Integration.—In many industries, establishments making products falling into the same industry category use a wide variety of processes and materials to produce them. Also, within the same industry classification based on end products, may be included those establishments which are vertically integrated and those which put only the finishing touches on an already highly fabricated purchased item. For example, in the refrigeration industry, there are instances of almost complete process integration in which the production of the compressor and condensing unit, electric motor, and even the castings for those intermediate products, as well as the stamping of the case and the final assembly, are all carried on at one plant. In other plants, the condensing unit, the motor, and the case may be purchased and merely assembled into the finished product.

In some instances, nonintegrated plants have been placed in separate industry categories from the integrated plants. In many industries, the census provides separate statistics on departmental operations or on the production of intermediate commodities made and used in the producing plant. When an industry includes plants which ship a significant proportion of their output to other plants of the same company, separate figures are usually shown on the interplant transfers.

These differences in the integration of production processes, types of operations, and types of materials used should be taken into account when relating the general items (employment, payrolls, value added, etc.) to the product and materials data. For those industries where the integrated type of operations is of consequence, that fact is pointed out in the explanatory text for the industry.

Industry Code Resistance.—The production of many establishments is so evenly divided among two or more industry-determining product groups that the predominant groups (which can represent less than half of the total value if there are three or more groups) changes from year to year. In the ASM, these plants are prevented from shifting back and forth among industries due to minor shifts in product mix, by the application of a "resistance formula" in assigning industry classifications.

A resistance formula of the ASM type was first used in the 1963 Census of Manufactures and again applied in the 1967 census. In the 1967 census, the formula was applied only to establishments included in the 1966 ASM sample panel with certainty (that is, included with a probability of "1"). In general, certainty cases included all establishments of companies with at least one manufacturing plant with 100 employees or more (250 employees or more in the apparel manufacturing and printing and publishing industries). The formula gives approximately equal weight to the need for maintaining continuity in the establishment composition of an industry, thus improving the measurement of change, and the need for reflecting the industry's exact status at a point in time.

In the 1967 census, the industry classification of a certainty case was allowed to change from that assigned in 1966 under one of the following conditions:

(1) The value of the 1967 primary products constituted 60 percent or more of its total value of product shipments, or

(2) The value of the 1967 primary products, while less than 60 percent, was at least twice the value of the 1966 primary products in 1967, or

TABLE F. Value Added by Manufacture, by Regions, Divisions, and States: 1967

(3) The value of 1967 primary products, while not meeting either of the two prior conditions, exceeded the value of the 1966 primary industry's products in both 1967 and 1966 by at least 20 percent.

The Classification of Products and Materials.—In census industrial statistics, a commodity classification system based on the SIC is employed. The code numbers used in this system relate the commodity to the industry in which it is produced. For example, the 7-digit product code number 2023212 refers to canned evaporated milk. The first five digits of this code number, 20232, refer to the "product class" canned milk, and the first four digits, 2023, refer to the industry in which these products are made (the condensed and evaporated milk industry). The system is also applied to the coding of materials insofar as the first four digits are concerned; for example, the code number 013205 refers to whole milk used as a materials, and the first four digits of this code number, 0132, refer to the agricultural industry, dairy farms, where this product originates.

This SIC-based system is simpler than other systems for the coding of industrial products and materials used, since there is a direct numerical relationship between commodities and industries. Complications occur in the few SIC industries defined in terms of processes or equipment used as well as products made. As an example, women's sweaters are produced in knitting mills (industry 2253) and also in cut-and-sew shops (industry 2339). To retain the industry-of-origin concept, therefore, it is necessary to assign different product code numbers to women's sweaters, depending on where they are made.

The SIC-based commodity classification is used in the Census Bureau's entire industrial statistics program, including monthly, quarterly, and annual surveys, and also in the census of wholesale trade. The Bureau also publishes data on imports and exports in terms of SIC-based categories as well as the traditional Schedule B and TSUSA systems.[10]

5. GEOGRAPHIC CLASSIFICATION

Census Divisions and Regions.—In order to present census data at a level intermediate between the U.S. total and those for the

[10]Schedule B is the U.S. export classification while TSUSA is applied to imports.

TABLE G. The 50 Largest SMSA's Ranked by Value Added by Manufacture: 1967 and 1963

Standard metropolitan statistical area	Number of employees (thousands)	Value added by manufacture	1967 rank	1963 rank	Standard metropolitan statistical area	Number of employees (thousands)	Value added by manufacture	1967 rank	1963 rank

Note: The Flint, Mich., SMSA falls within the top 50 SMSA's, but is excluded from this table to avoid disclosing figures for individual companies.

individual 50 States and the District of Columbia, the Census Bureau has used regional groupings for over a century. Since the 1909 Census of Manufactures, the present nine geographic divisions have been used. Beginning with the 1939 census, the nine divisions were also classified into four geographic regions: Northeast, South, North Central, and West.

Not only are these groupings convenient for the summary presentation of census data below the U.S. level, but they are also essential to presenting a maximum of geographic information where the individual State data cannot be shown without disclosing figures for individual companies. (See section 22, "Confidentiality".) The relative importance of manufacturing among the regions, divisions, and States is shown in table F.

Standard Metropolitan Statistical Areas.—In addition to the data for the legally constituted geographic units (States, counties, and cities), all manufacturing totals are shown for approximately 230 standard metropolitan statistical areas (SMSA).[11] In the 1967 tables, detail for 2-, 3-, and 4-digit industries is shown for any SMSA when it would not disclose data for individual companies and the industry had at least 250 manufacturing employees. Prior to 1967, detail had not been shown for SMSA's with under 40,000 total manufacturing employment and only industry group figures were shown for SMSA's with 40,000 to 190,000 employees.

Standard metropolitan statistical areas are integrated economic and social units with a large volume of daily travel and communication between the central city (having 50,000 or more population) and outlying parts of the area. Each area (except in New England) consists of one or more whole counties. An area may contain not only highly industrialized counties but also adjoining counties which, though primarily residential in character, contribute significantly to the industrial counties' labor force and are socially and economically integrated with the central city. These areas were defined by the Federal Committee on Standard Metropolitan Statistical Areas for general-purpose use in presenting economic and social data. In the New England States, similar integration criteria have been applied in defining standard metropolitan statistical areas, but on a city and town basis, because towns are regarded as the significant unit in this region of the country.

[11] See appendix F for a description of each SMSA.

The requirement that each SMSA consist of county units (except in New England) sometimes results in the inclusion in an area of a considerable amount of territory which would not ordinarily be considered "metropolitan," much less "industrial." It is recognized that metropolitan areas could be more accurately defined in terms of smaller area segments such as minor civil divisions, but the usefulness of areas so defined would be limited by the fact that many types of economic and social data are available only on a county basis.

Each SMSA is designated by the name of the principal city of the area. In addition to the name of the principal city, the area title may include one or two additional city names.

Industrial Counties.—In addition to industry statistics for standard metropolitan statistical areas, table 7 of each State report, presents data by county for each industry group (2- and 3-digit) that had at least 450 manufacturing employees where it would not result in disclosure of figures reported by individual companies.

Cities with 450 Manufacturing Employees or More.—Summary totals and industry detail at the 2-digit level are shown for individual cities with 450 manufacturing employees or more, provided the data do not disclose information for individual companies.

Value added by manufacture in all SMSA's accounted for 76 percent of the U.S. total in 1967. The relative importance of the 50 largest SMSA's is shown in table G.

II. METHODS

6. PLANNING AND PREPARATION

General.—The Census Bureau has an obligation to meet public needs for timely and reliable information while holding costs and the burden on respondents to a minimum. During the planning stages of the 1967 economic censuses, the advice of trade and professional associations, Federal and State government agencies, individual companies, labor unions, and research and educational organizations was solicited in an effort to reach both the users of data and the respondents who supply the basic figures. Simultaneously, studies of the problems encountered in the 1963 censuses were undertaken, and proposals to improve the methods of collection, processing, and tabulation were explored.

A Major Processing Innovation.—Beginning with the 1954 economic censuses, the basic mailing lists have been obtained from Internal Revenue Service (IRS) and Social Security Administration (SSA) records.[12] These records were also sampled to develop statistics for retail and service establishments with no employees. After the 1963 censuses, it was decided to investigate the feasibility of making greater use of the data in the IRS-SSA records. This effort led, in the 1967 censuses, to the exemption of over 2,000,000 firms from the filing requirement, including 120,000 small manufacturers. Instead, census-type statistics for this group were developed from IRS-SSA records. Well in advance of the data collection phase of the censuses, plans for using these records for small employers were developed in close cooperation with those agencies. Specific procedures for this use and for assuring confidential treatment of individual tax returns were set forth in Executive Order No. 10911, dated January 17, 1961, and Treasury Decision No. 6547 of the same date. The basic records used were business income tax returns (IRS forms 1040C, 1065, 1120, and 1120S) and payroll tax returns (IRS form 941). The information obtained from these reports was the name and address, payrolls, and gross business receipts. In addition, an SIC industrial activity code was assigned by use of the permanent SSA records which indicate the industry or kind of business of each employer. Other census statistics for these small firms were imputed, using industry average ratios to payrolls and sales.[13]

[12] The 1947 Census of Manufactures list was also obtained from the SSA.

[13] As discussed elsewhere in this introduction, the amount of imputation introduced by this procedure was only about 1 percent of the overall totals.

Planning the Content of Questionnaires.—As in previous censuses, the content of the 1967 questionnaires was developed in consultation with a large number of organizations and individuals, representing both the manufacturers who supply the basic data and those who use the resulting statistics. Those consulted included government agencies, individual firms, labor unions, the American Statistical Association, the American Economic Association, the American Marketing Association, the National Association of Manufacturers, and all national manufacturers' associations covering specific industries.

A special effort was made to obtain the advice of individual manufacturers and their trade associations as to the content of the sections of the report forms dealing with the output of specific products. Drafts of the proposed 1967 product sections were circulated among 800 trade associations and about 4,000 manufacturing companies, both large and small. These inquiries followed the pattern of the 1963 census inquiries, with the introduction of new product detail reflecting suggestions received by the Census Bureau after the 1963 canvass. Small items (those valued at $5 million or less) were not retained in the list unless they were needed to simplify the classification of other products or were of strategic importance. The manufacturers and others consulted in this clearance procedure were requested to comment particularly as to whether the proposed detail was readily reportable from business records, and whether it represented the most appropriate set of items for the industry. A restriction was placed on proposals for additional detail; it was stipulated that the 1967 value of any new product category should exceed $15 million.

The thousands of comments and suggestions received in this clearance procedure were analyzed by the census staff. Finally, a detailed account of the review procedure and the decisions reached was forwarded to the Office of Statistical Standards, Bureau of the Budget, along with the Census Bureau's recommendations for the content of the product sections.

The final review of the content was performed by the Office of Statistical Standards with the assistance of the Advisory Council on Federal Reports. The latter organization is a group of business executives representing a cross section of industries and various professions within companies such as controllers, economists, and market research directors.

7. REPORTING FORMS

A representative selection of the reporting forms used in the 1967 census is reproduced in appendix D. The uses of each of them are discussed below.

General Forms.—This group of forms was used in the economic censuses generally, either as companywide reports or as reports for establishments whose classification was not known precisely in advance of mailing.

NC-X1A, Report of Company Organization.—This companywide report and its companion form NC-X1B were used in the precanvass of multiunit companies conducted in 1967. A more detailed account of their use is given in section 8, "The Mailing Lists."

NC-X3, General Schedule.—This questionnaire was designed to obtain information from small companies for which the industry code available in the SSA records was not precise enough to indicate which one of the standard census questionnaires should be mailed. The information provided on form NC-X3 was used to classify these companies by industry and tabulate their data in the appropriate census.[14]

NC-X6, Central Administrative Offices or Auxiliary Establishments.—Many multiunit companies maintain separate establishments to provide centralized administrative, management, or other supporting services for other establishments of the same company, but not for the general public or other companies. These establishments were asked to complete form NC-X6. The form contained questions on approximate employment for such functions as centralized administration, research and development, warehousing, and other auxiliary activities, and on the cost of research and development work performed by these nonmanufacturing establishments.

Annual Survey of Manufactures Forms.

MA-100.—This form is the establishment report used in the ASM since 1949 (with modifications). As mentioned above, this form was used in 1967 as the first sheet of the census of manufactures report for the establishments included in the ASM sample. The establishment's 1966 data were imprinted on the report form before mailing, thus aiding the respondent in following the instructions for the census. Item 9, "Quantity and value of products shipped and other receipts," on form MA-100 corresponds to item 18 on the census form MC-36B and its companion forms, the difference being that item 18 called for more detailed information on product shipments.

MA-101, Expenditures for Plant and Equipment for Manufacturing Establishments Under Construction.—This form was designed to obtain data on capital expenditures by large manufacturing firms for new plants not yet in operation at the end of the year. It was mailed to all multiunit companies with 250 employees or more. It was also mailed to any other company which indicated on one of its establishment report forms, in a special check-box section, that it had a plant under construction but not yet in operation. Each such plant was coded geographically and to a 4-digit industry from the description given of its expected activity. The information obtained on form MA-101 was included in the capital expenditures figures in the 1967 census tabulations. (For further discussion, see section 18, "Capital Expenditures.")

[14]The use of Form NC–X3 is also discussed in section 8, "The Mailing Lists."

Other Related Forms.—Form CB-51J-1, "Manufacturers Sales Branches and Sales Offices," which is reproduced in appendix D, is typical of the several forms used for these establishments in the census of business. The forms differed only in the kinds of products sold as listed in item 12. In item 5, line b provided verification of the classification of the establishment as a sales branch or sales office. If the line-b percentage indicated that more than half of the goods sold were not manufactured by the parent company, the establishment was reclassified into one of the merchant wholesaler categories.

NC-K1, Company Summary Report.—Each multiunit company with 250 employees or more received a form NC-K1, Company Summary Report, along with the appropriate questionnaires for its establishments. The NC-K1 requested consolidated company totals for key data items, such as receipts, new capital expenditures, inventories, and fixed assets. In addition, each company was asked to distribute the 1967 employment reported on its establishment questionnaires by its IRS-SSA employer identification numbers (EI numbers) and to compare these totals to the figures reported on its Treasury Form 941 tax returns. This comparision provided assurance that all domestic establishments of each large multiunit firm and its subsidiaries would be included in the censuses. Form NC-K1 served this operational purpose and also provided essential data for the enterprise statistics program described above in section 1.

Census of Manufactures Forms.—The questionnaire reproduced in the appendix, form MC-36B, is typical of the 180 forms used for operating manufacturing establishments. Each of these forms was designed to be used for a specific group of industries. For establishments included in the Annual Survey of Manufactures sample, form MA-100 was substituted for the front sheet of form MC-36B and its companion forms, since the content was virtually the same and it was desired to maintain continuity of reporting in the ASM. Whether or not form MA-100 was used, the inquiries on the 180 forms were identical except for the detailed questions on products shipped, materials used, and miscellaneous topics such as operations performed, equipment used, and delivery of products.

MC-171, Department of Defense Establishments, and MC-D4, Penal Institutions.—These forms were used to collect information on government-owned and government-operated manufacturing establishments. They were used for two types of establishments: (1) Manufacturing facilities owned and operated by the Department of Defense, and (2) prison industries (Federal, District of Columbia, and State). The data were prepared with the cooperation of the Department of Defense, the Department of Justice, and the District of Columbia and State prison systems. For Department of Defense installations, information was provided on employment, man-hours, payrolls, cost, and value of work done, by industry group and by State. For prison industries, however, only product data was requested. The data are presented in a special report included in Volume I and are not included in the totals for operating manufacturing establishments.

8. THE MAILING LISTS

General.—As discussed in section 6 above, the basic lists for 1967 were obtained from IRS-SSA records, supplemented importantly by the inclusion of the ASM list of 60,000 establishments. Since the IRS-SSA lists consist essentially of the names and addresses of companies rather than establishments,[15] however, it was

[15]The SSA records for multiunit companies identify "reporting units," which in many instances correspond to census establishments. The differences are such, however, that it was found necessary to obtain up-to-date lists of establishments as described in this section. Also, the Census Bureau concept of a company differs from the IRS–SSA definition, since the Census company includes all establishments under common ownership or control; in the IRS–SSA records, subsidiary corporations are often treated as independent companies.

necessary to follow separate procedures for multiunit companies (those operating at more than one location).

The Precanvass.—Multiunit companies were required to file at least one establishment report[16] covering each location. In order to select the appropriate questionnaires, it was necessary to determine in advance the nature of operations at each location. Beginning early in 1967, therefore, a "Report of Company Organization" (form NC-X1A)[17] was obtained from firms known to be multiunits from previous census records. All multiunit firms included in the ASM reported on form NC-X1A. A shorter questionnaire, form NC-X1B,[17] was also sent to other firms which were regarded as possible multiunits, including all manufacturers with 500 employees or more who were not on the NC-X1A list.

Both of these forms consisted essentially of a report on company affiliation and a list of the domestic establishments operated by the company. Before the forms were mailed, the company's establishments as identified in census records were prelisted. In the instructions for form NC-X1A, the respondents were asked to make any necessary corrections to this list. In addition, they were asked to supply descriptions of any new establishments not already listed, including their approximate size.

Approximately 700 large multiunit companies were segregated for special handling in the precanvass because problems involving overlap and duplication were anticipated. Many of these companies were active in retail and wholesale trade as well as in manufacturing. The instructions for the precanvass were reviewed with these firms in personal discussions with officials of their accounting departments, in order to make certain that the procedure was understood and the establishments properly described on form NC-X1A.

Initial Control File.—This file, consisting of about 7 million names and addresses of companies, was assembled from IRS-SSA records and other sources including the 1963 economic census records. For manufacturing, the ASM records were incorporated in the file.

Single-Unit Companies.—The mailing lists for single-unit companies (those operating at only one location) were developed from the initial control file by removing out-of-scope companies (those whose activities were not to be surveyed in the economic censuses) and those identified as multiunits in the precanvass. A special survey of out-of-scope companies with more than 50 employees in selected industries was conducted to doublecheck their eligibility, and some names were added to the mailing list as a result.

The final step was to set aside the records of the small companies for which census-type statistics were to be developed from administrative records. The remaining records constituted the mailing lists for single-unit companies.

General Schedule.—While the lists assembled in these ways were generally adequate in providing sufficient industry information to determine the proper form for mailing, a number of the records did not have precise industry information associated with them. Form NC-X3, "General Schedule," which is reproduced in appendix D, was mailed to all such companies. Since it was assumed that these companies were quite small, only a few key figures were requested. On the basis of the information reported, these reports were coded and included in the basic tabulations. If form NC-X3 indicated that the company was actually large, it was later requested to file one or more of the appropriate standard questionnaires.

[16] If two or more distinct lines of activity were carried on at one location, separate reports were obtained under some circumstances. (For a complete discussion, see "Establishment Basis of Reporting" in section 4, above.)

[17] This form is reproduced in appendix D.

9. GEOGRAPHIC AREA CODING

Accurate and complete information on the physical location of each establishment is required in order to tabulate the census data by SMSA's, counties, and cities. As in previous censuses, the post office address and ZIP code of the establishment were not always accepted as defining the physical location, but respondents were required to describe the actual location in terms of street address, city, town or village, county, and State. For establishments located in rural territory, the name or number of the nearest highway was requested and the distance from the nearest town or other urban place.

In censuses prior to 1963, clerks assigned geographic code numbers to each establishment based on the description furnished by the respondent. This process was slow and required careful verification. Beginning with 1963, a computerized system was developed which assigned an area code number and a prefix symbol to the mailing address before the questionnaires were mailed. The prefix symbol indicated whether or not the mailing address was clearly acceptable as describing the physical location. If there was any question about its acceptability, the respondent's description was later carefully reviewed after the questionnaire was received. The assignment of tentative code numbers by the computer was based on extensive reference files containing nearly a million business names and addresses.

The geographic coding system used in the 1967 economic censuses was based on the 1963 system with some improvements and revisions. The major changes included expanding the address reference file, and use of the ZIP code as part of the procedure for matching addresses against the reference file.

10. DATA COLLECTION

General.—Although the greater use of administrative records in 1967 substantially reduced the number of companies canvassed directly, there remained nearly 2 million which were required to file, including about 175,000 manufacturers. The assembly of several hundred different questionnaires into mailing packages, correctly labeled and coded, combined with the correct instruction booklets, was an extensive operation.

Instructions.—Several general instruction booklets were prepared to assist respondents in completing questionnaires for the 1967 economic censuses. In addition, separate detailed instruction manuals were printed for establishments in a few kinds of business and in certain mineral industries with peculiar reporting problems, as well as for manufacturing establishments reporting on the detailed standard forms.

Timing.—The bulk of the 1967 questionnaires were mailed in mid-February 1968 with a due date of April 30, about 2 months later than the corresponding due date for the 1963 censuses. Adoption of the April 30 due date, which had been urged by accountants, was based on the assumption that reports would be filed more promptly if their preparation followed that of Federal income tax returns, which were due April 15, and that the "lost" 2 months would be gained back. This turned out not to be the case. The collection phase was not completed until early November 1968, about 2 months behind the 1963 record.

Followup.—Companies which did not return their questionnaires by the due date had to be reminded that their returns were overdue. A reminder card was used for the first followup, and form letters used in the five subsequent mailings. Two basic letter formats were used, one for multiunit companies that had returned questionnaires for some but not all establishments, and the other for companies that had not responded at all.

The last followup letter was mailed in October 1968. Estimates based on data from administrative records were included in the census tabulations for the relatively small number which had not responded by the closeout date in November 1968. Thus, all companies and establishments included in the original mailing list (except those determined to be inactive during 1967) were represented in the final statistical results, either by actual returns or by proxy returns generated from administrative records. A special effort was made to obtain actual returns from all large firms, so that the volume of business represented by proxy returns was relatively very small.

11. DATA PROCESSING

General.—The editing,[18] coding, and tabulation of data for the 5 million establishments represented in the 1967 economic censuses was a complicated task requiring extensive advance planning and careful coordination among the Census Bureau's organization subdivisions. Automatic data processing and other advanced techniques were used in all phases to a considerable extent.

Facilities.—In the mail collection phase, the questionnaires were returned by respondents to the Census office at Jeffersonville, Ind., where most noncomputer (that is, clerical) processing operations were performed. The Jeffersonville functions consisted mainly of preliminary screening of questionnaires, carrying on routine correspondence with respondents, punching cards, and transmitting the punched data to Washington on a high speed transmission system. The Washington staff handled computer operations, and all operations in connection with the use of IRS and SSA records.

Preliminary Screening.—After checking in against control lists and assigning geographic codes, the questionnaires were reviewed clerically to see that they conformed to certain minimum requirements before further processing. In the case of multiunit companies, the sum of employment and payrolls reported on its establishment questionnaires was compared with the control totals reported on form NC-K1, "Company Summary Report." Questionnaires received from ostensibly single-unit firms were reviewed to ascertain whether they had become multiunits through merger or acquisition. All questionnaires were reviewed to see that the entries were legible and punchable, and that entries appeared for a number of key items. For manufacturing establishment returns, the key items were payrolls and value of shipments. Questions arising in the screening operation were resolved by writing or telephoning the respondents. Complex problems involving multiunit companies were either handled by a special task force of experienced analysts in Jeffersonville or were referred to the Washington office.

Computer Editing.—All of the establishment records from the 1967 censuses of manufactures and mineral industries underwent computerized processes of screening and detailed testing of data. While most of these programs were newly devised in 1967, they were largely based on similar programs in use during the 1963 censuses. As in 1963, average values and tolerance limits for key operating ratios (for example, cost of materials per dollar of shipments, payroll per employee, production-worker wages per man-hour, etc.) played a fundamental role in the editing process. However, more extensive testing and more sophisticated routines for adjusting data which failed the tests were incorporated into the 1967 programs. The need for computer editing may be judged by the fact that more than half of all 4-digit SIC industries had one or more data cells changed by more than 5 percent as a result of application of these programs.

In sequence, the computer programs used included a Housekeeping and Screening Edit, a Coverage Control and Matching Edit, a Magnitude Edit, a General Statistics Edit, an Intercard Intercolumn Edit, a Product and Materials Edit, a Duplicate Removal Program, and various programs of referral and of aggregate testing. These programs are described in outline form below. Also included within this sequence were programs of geographic coding and of industry coding, which are described elsewhere in this introduction.

The Housekeeping and Screening Edit was designed to inspect each record for the presence of basic information such as identification numbers, geographic codes, and source codes (that is, ASM, census of manufactures, or census of minerals). This program also included some simple data adjustments, such as the replacement of a missing total by a corresponding sum of detail.

The Coverage Control and Matching Edits were a system of programs which checked the consistency of clerically assigned coverage codes with reported information on the ownership status of the establishment. For ASM establishments, the program included matching with the 1966 ASM record file to identify corresponding prior-year records. In the 1967 Census of Manufactures, nearly 339,000 establishments were initially defined as being within the scope of manufacturing. Of this number, approximately 26,000 were identified as having no activity during 1967. Of the remainder, more than 11,000 were rejected from the combined output of the Housekeeping and Screening Edit and from the Coverage Control and Matching Edit. This latter number was clerically reviewed, corrected where necessary, and recycled back into the computer.

The Magnitude Edit was designed to test the size of two key items, payrolls and value of shipments. For ASM establishments, these items were compared with the corresponding entries for 1966, and were accepted if satisfactory. If not accepted, the ASM records were channeled through the standard edit, which compared payrolls to a historical employment-size code. Payroll figures passing the test were then used, in conjunction with cost of materials, in testing the value of shipments.

When failures in the magnitude tests were encountered, a fixed sequence of attempts to adjust the data were performed, which included dividing a reported figure by 1,000 (a common error was the reporting of values in dollars rather than in thousands of dollars as requested), or replacing a total by a sum of detail where these differed. If the corrective procedures of the Magnitude Edit were unsuccessful, the schedule was rejected for clerical inspection, correction where necessary, and recycling. This occurred for about 18,000 establishments.

The General Statistics Edit tested key operating ratios and adjusted the record or flagged it for later attention if it failed the test. Fifty-two such ratios were assigned for use in testing census of manufactures records, and 41 1966-67 ratios of change were used in testing the ASM reports. The tolerance limits and average values for these 93 ratios were based on the limits used for the corresponding tests in the 1963 census, with some correction and updating based on more recent ASM information.

[18] In data processing, the term "editing" means the review of information collected on questionnaires or from other sources, with the objective of locating and correcting erroneous entries.

In the presence of ratio failures, the computer program was designed to determine the component of the ratio which was most likely to have caused the failure. This was done by a process of inspecting other ratios containing each of the suspect components, and by computing an overall weighted-reliability index for each. The component with the lowest reliability index was judged to be incorrect. The computer then attempted to adjust the questionable figure by a process of "rounding" (multiplying or dividing by successive powers of 10), substitution of a total by a sum of detail, or by imputation based on one of the several ratios in which the suspect component was contained. After each such attempted adjustment, the new figure was accepted if it resulted in an improved reliability index.

In addition to testing and correction of reported information, the General Statistics Edit was the vehicle for the imputation of data for the 120,000 companies designated as administrative-record cases, as well as data for companies which failed to report in the mail canvass. Imputation for all reasons, failure to report as well as administrative records, accounted overall for about 3 percent of the total value of shipments. Records were not rejected and removed from the computer tapes in the General Statistics Edit, but were flagged and printed out for review by an analyst whenever the computer made a large adjustment, found a large year-to-year change, or could not make an acceptable adjustment after test failure. Excluding administrative records, about 40,000 such cases were printed out for review and possible correction.

The Intercard Intercolumn Edit was designed to test specific relationships among products, materials, and special inquiries. The record was flagged for inspection if the test failed; some 64,000 records were printed out for review from this edit.

The Product and Materials Edits were performed after the data on products and materials had been extracted from the basic establishment records, and assembled in product (or material) sequence. The edits were designed to inspect the reported quantities of production and of consumption after the corresponding values were tested and found acceptable. Unit values, in terms of dollar value per unit of quantity, were computed and ranked from highest to lowest. The most extreme values were removed, and the truncated data were used in the formulation of parameters (average deviation, central value, and upper and lower tolerance limits) which were printed out for review by analysts. This routine differs from those in other edits in that the parameters for editing were developed from the data at hand rather than from historic data or predetermined reasonableness limits.

The Duplicate Removal program was designed to identify and eliminate duplicate establishment records from the census. The sources of duplication were many; imputed records which were followed by the late receipts of a report from the respondent was typical. The program resulted in the elimination of nearly 6,000 duplicate establishment records from the census file.

As in the 1963 census, this preliminary round of computer editing and professional correction was followed by a more detailed review of establishment records. Among the devices used at this stage were an "outlier" program which printed out establishment reports of dubious quality in terms of their internal consistency. The outlier program used some of the same ratios as the General Statistics Edit, but with parameters updated to reflect the characteristics of 1967, rather than earlier, data. Records with one or more suspicious ratios were printed out for review. In addition, aggregates of records at the industry and the geographic cell level were inspected with ratio tolerance limits adjusted to reflect the number of establishments contributing to the cell.

12. COVERAGE AND ACCURACY

Since the list of companies obtained from IRS and SSA records was considered to be complete, no field coverage check was conducted. The precanvass and other special procedures for multiunit companies described in section 8, "The Mailing Lists," and section 10, "Data Collection," were designed to secure complete lists of establishments, thereby amplifying the IRS-SSA company list. Control totals in terms of employment and payrolls of multiunit companies were also used to verify the completeness of establishment coverage. This procedure is discussed in section 11, "Data Processing."

Comparison of statistics tabulated from the census of manufactures with the Census Bureau's Current Industrial Reports series, or with data originating with other agencies was possible in many instances, thus providing a further confirmation of completeness and accuracy. These figures range from employment and wage totals compiled by the Bureau of Labor Statistics to detailed commodity output figures published by the Internal Revenue Service, the Fish and Wildlife Service, and the Department of Agriculture. In the industry reports in Volume II, differences between the census of manufactures and other statistics are explained wherever possible. Census of manufactures comparability with broad measures such as national income, new capital expenditures, and production indexes are discussed elsewhere in this introduction. The Census Bureau's other procedures designed to improve the accuracy of the census data are discussed above in the sections on data collection and processing. Comments on the valuation of intracompany shipments by multiunit companies are included in section 15.

III. COMMENTS ON STATISTICAL MEASURES AND TABLES

(Explanations and definitions of the various measures of activity for which statistics are compiled in the census of manufactures are presented in appendix A. In the following sections, the limitations and other characteristics of some of these measures are discussed, the content of the statistical tables is described, and comparisons with other statistical series are presented.)

13. EMPLOYMENT AND PAYROLLS IN ADMINISTRATIVE OFFICES AND AUXILIARY ESTABLISHMENTS

In the industry chapters of Volume II, the data on employment and payrolls refer to operating manufacturing establishments and are so described. In the summary tables, the employment and payrolls of central administrative offices and auxiliary establishments are also included. However, whereas the operating establishments were coded to a 4-digit manufacturing industry, the administrative offices and auxiliaries were coded only to the 2-digit industry group of the establishments they served. In most of the tables with industry detail, the administrative offices and auxiliaries are shown as a separate industry group, but statistics for them by 2-digit industry appear in each volume in the General Summary tables. The relative importance of administrative offices and auxiliaries has increased substantially in recent years, because of a tendency to centralize functions formerly

performed in manufacturing plants. Such functions include accounting (particularly where computerized), warehousing, repair services, and miscellaneous others. As indicated in table H, this tendency was quite marked between 1954 and 1963, but there was less relative increase between 1963 and 1967.

TABLE H. Employment in Central Administrative Offices and Auxiliaries and in Operating Manufacturing Plants: 1967 and Earlier Census Years

Census year	Employees in operating manufacturing establishments		Employees in central administrative offices and auxiliaries		
	Thousands of employees	Percent change from previous Census year	Thousands of employees	Percent change from previous Census year	Percent of total employment[1]
1967.....	18,492	+14.0	830	+14.3	4.3
1963.....	16,235	+5.3	726	+20.6	4.3
1958.....	15,423	-1.4	602	[2]+32.9	3.8
1954.....	15,645	(NA)	453	(NA)	2.8

Source: Census of Manufactures.

Standard notes: (NA) Not available.

[1]The total includes manufacturing establishments, central administrative offices, and auxiliaries.

[2]The apparent increase from 1954 to 1958 is believed to be somewhat overstated, because coverage of administrative offices and auxiliaries was more complete in the 1958 census.

14. MATERIALS

In addition to the total cost of materials which every establishment was requested to report, quantity and cost information was collected for approximately a thousand specific materials.[19] About 360 of these were "complete coverage" materials; i.e., every industry that consumed appreciable quantities of the material was canvassed so that the data would represent at least 90 percent of manufacturing consumption. For the remaining materials, information on consumption was obtained on a more limited basis, generally only in those industries in which the materials were important inputs. Detailed consumption information was collected in the standard materials inquiry, in the product inquiries (for items which were produced and consumed in the same plant), or in a few instances in special inquiries. The resulting statistics are presented mainly in tables 6A and 7A of the industry chapters, Volume II.

Because American industry uses an enormous variety of materials, the choice of materials for which "complete coverage" consumption data (90 percent or higher) were obtained had to be strictly limited. The selection of a particular material for such coverage was based on the following criteria:

(1) The importance of the material as measured by the total value of U.S. consumption of the material;

(2) The percentage of total consumption accounted for by manufacturing establishments;

(3) The availability of consumption information from manufacturers' records; and

(4) In certain instances, other factors such as the strategic importance of the material or the availability of historical data on the use of the material.

The materials included on a limited-coverage basis were chosen not only because they constituted important inputs for particular industries but frequently because they provided information necessary to classify plants by SIC industry. In using the detailed data on materials consumed which appear in table 7A in the industry chapters of Volume II, the following limitations should be noted:

(1) Materials were reported for the establishment as a whole and no attempt was made to ascertain how much of the material was used in each of various products. Thus, the industry totals appearing in table 7A represent consumption in secondary products as well as primary products of the industry represented. The extent of secondary production is measured by the specialization and coverage ratios shown in table 5A of the industry chapters.

(2) Attention should be paid to the codes ending in "000" and captioned "materials, parts, containers, and supplies, not specified by kind." The amounts appearing on these lines represent imputed totals for establishments whose statistics were developed by use of administrative records, and totals for other establishments which failed to report their consumption in specific terms. Thus, for most industries, the specific categories are understated. A judgment on the statistical significance of the understatement for each industry may be made on the basis of the relationship of the value shown for the "not specified by kind" (code 000) line compared with the total of materials, components, parts, containers, and supplies for the industry.

(3) Establishments consuming less than a specified amount of material were not requested to report consumption of the material separately. For the majority of individual materials, the minimum amount was $5,000. The use of this cutoff is not believed to have had a significant effect on the totals.

15. VALUE OF SHIPMENTS BY MULTIUNIT COMPANIES

General.—Except for a few industries as indicated in appendix A, the respondents were instructed to report net selling values, f.o.b. plant, after discounts and allowances and excluding freight charges and excise taxes. Multiunit companies were instructed to report for each establishment as if it were a separate economic unit and, in particular, to report interplant transfers at their full economic value, including not only the cost of production but also a reasonable proportion of company overhead and profits. Since there is no advertising or other selling cost involved, it would be expected that the value per unit of such transfers would be less than that for commercial sales. The plant receiving the transferred goods was instructed to include them in its cost of materials, valued as at the shipping point plus the cost of freight and other handling charges.

In the case of goods transferred to sales branches, or sold through separate sales offices, the implication of the "f.o.b. plant" instruction is that the value is at a somewhat lower level than the final invoice value, because the cost of selling (mainly the cost of operating the sales branch or office) is excluded.

[19]See 1967 Censuses of Manufactures and Mineral Industries, *List of Materials Consumption Items,* MC67-6, for a more detailed account of the collection of data on materials consumed.

In practice, there is reason to believe that these instructions were not followed by all companies. In a recordkeeping practices study of 54 multiunit companies conducted a few years ago, it was found that about half of them had reported interplant transfers of semifinished products at commercial or market prices, which tend to be somewhat higher than the "cost plus overhead and profit" requested in the census instructions. In the case of finished products transferred to separate selling organizations, half of the companies interviewed valued the products at their final or invoice price, which again would be somewhat higher than the "f.o.b. plant" transfer value requested. It appears from this study and other observations that the value of shipments of products reported by multiunit companies tends to be overstated. For products characterized by a substantial amount of interplant shipments, separate quantity and value figures were requested on the census forms. Data on these shipments, the unit value of which is less accurate than the unit value for shipments outside the company, are presented separately in table 6A in the industry chapters of Volume II.

Individual Products.—In the 1967 census program, information was collected on the output of approximately 10,500 individual product items.[20] The term "product" as used in the census of manufactures represents the finest level of detail for which output information was requested. Consequently, it is not necessarily synonymous with the term product as used in the marketing sense. In some cases it may be much more detailed and in other cases it is more aggregative. For example, pharmaceutical preparations were reported in terms of 160 products, while canned meats was a single product. Frequently, large aggregative values at the product level indicated that detailed production figures were available from other government sources or reliable private surveys.

Some 5,500 of the product items were listed separately on the 1967 census report forms. Data for the remaining 5,000 products were obtained in the monthly, quarterly, or annual commodity surveys comprising the Current Industrial Reports series of the Census Bureau. Totals for the year 1967 for these items as derived from the commodity surveys are shown in the "product shipped" table (table 6) in the industry chapters of Volume II together with the tieline total value collected in the census for reconciliation.

Typically, both quantity and value of shipments information was collected. However, if there was no meaningful physical quantity measure that could be reported by manufacturers, only value of shipments was collected. For products which are used to a large degree within the same establishment as materials or components in the fabrication of other products, total quantities produced and often the quantities consumed within the plant were collected. Typically, the information on production was also collected for products for which there are significant differences between total production and shipments in a given year because of wide fluctuations in finished goods inventories. Alternate measures of output of products, such as value of work done for products with long production cycles, were used as appropriate and feasible.

Classes of Products.—For the purpose of summarizing the product information, the separate products were aggregated into classes of products which were, in turn, grouped into all primary products of each industry. The code structure used is a 7-digit number for the individual product, a 5-digit code for the class of product, and a 4-digit code for the total primary products in an industry (see section 4 for application of coding structure to the assignment of SIC codes for establishments).

[20]See 1967 Census of Manufactures, MC67-1, *Numerical List of Manufactured Products*, and MC67-2, *Alphabetic List of Manufactured Products*.

The 10,500 product items in the 1967 census (including products from the Current Industrial Reports program) were grouped into approximately 1,200 separate classes. Products were grouped into product classes to bring out significant differences in the broad types of products within a 4-digit industry. General similarity of the kind or purpose of the products or of the manufacturing processes, type of markets, or of materials used, were the basis for product combinations. The economic significance of the class was also taken into account; residual products of an industry were grouped when the products were not sufficiently significant in dollar value to warrant separate classes.

As a result of the increased number of respondents included in the product-class shipments totals, these categories lend themselves to many more cross tabulations than do the 7-digit products, without disclosing information about the operations of individual companies. In the industry chapters of Volume II, table 6B provides information on the value of shipments of product classes by State; and table 5B, by industry of the establishment producing them. The latter table is the best vehicle for showing the primary and secondary product mix of an industry, as well as the interrelationship between the 4-digit industry value of shipments and the 4-digit product group value of shipments. In table 8, the product class is used to provide finer industry-type general statistics by classifying establishments within an industry according to the degree to which they specialize in producing a specific class of products.

The class-of-product concept was incorporated by the Census Bureau into its own program with the 1947 Census of Manufactures after it developed the technique in the compilation of World War II production statistics. Product classes formed the basis of collecting product information in the annual survey of manufactures when that survey was initiated in 1949. The classes have been revised over the succeeding years to improve the balance and significance of product combinations within each industry and to keep abreast of the growth and decline of products.

Effect of Use of Administrative Records on Product Data.—As noted elsewhere in this introduction, 1967 census statistics for about 120,000 small manufacturers were developed by use of IRS and SSA records. Since the SSA records were coded only to the 4-digit SIC level, it was not considered feasible to estimate the product output of these small companies in terms of specific 5-digit product classes or 7-digit products. The total value of output was therefore coded to the 4-digit level and published separately in table 6A of the industry chapters of Volume II. In table I, page 18, these data have been summarized together with other undistributed 4-digit totals reported by the larger companies. It will be seen from table I that the contribution of the small companies to product totals was of little importance except in lumber, furniture, and printing and publishing (groups 24, 25, and 27). The large companies which for various reasons reported only in terms of group totals were of somewhat more importance, accounting overall for about 3 percent of the total value of product shipments.

Nominally, the shipments of "small companies" as shown in table I represent the output of all establishments with less than 10 employees. Actually, less than half of the value of shipments of establishments with less than 10 employees was obtained from administrative records. This was due to several factors, the most important of which were—

(1) Many of the establishments with less than 10 employees were owned by multiunit companies and were covered in the mail canvass.

TABLE I. Value of Products Not Specified by Kind: 1967

(Millions of dollars)

Product group code	Total value of product shipments	Products not specified by kind			
		Total	Large companies	Small companies[1]	Percent attributable to small companies
Total	539,470.1	23,387.2	17,884.6	5,430.6	1.0
20	78,650.9	4,088.2	3,326.7	761.5	1.0
21	4,589.7	46.4	44.2	2.2	.1
22	20,141.0	691.2	550.1	69.1	.3
23	19,748.9	1,992.5	1,686.0	306.5	1.6
24	10,585.7	1,614.7	774.7	840.0	7.9
25	8,110.2	702.6	485.7	216.9	2.7
26	20,049.3	575.3	512.4	62.9	.3
27	20,878.9	1,805.2	923.1	882.1	4.2
28	40,013.1	1,030.3	851.9	178.4	.5
29	20,992.8	159.2	130.0	29.2	.1
30	12,236.8	512.5	414.6	97.9	.8
31	4,849.8	238.8	180.8	58.0	1.2
32	13,596.9	585.6	404.3	181.3	1.3
33	55,926.8	670.6	607.9	62.7	.1
34	32,928.9	2,720.7	2,342.1	378.6	1.2
35	46,076.8	2,874.8	2,223.4	651.4	1.4
36	39,429.2	937.8	793.5	144.3	.4
37	64,976.3	854.7	718.3	136.4	.2
38	8,759.5	340.2	263.3	76.9	.9
39 plus 19	16,928.6	945.9	651.6	294.3	1.7

Note: Based on preliminary data. These values represent product shipments, irrespective of the industry in which the products were made, and therefore differ from the industry group totals shown in the General Summary tables.

[1]Estimates derived from administrative records. See text for further discussion.

(2) Questionnaires were mailed to about 6,000 of the companies identified as having less than 10 employees. Part of these were the small companies included in the ASM sample; the rest were included in the mail canvass to improve the estimates of general statistics, products, and materials.

(3) Some companies identified originally as having 10 employees or more turned out to have less than 10 in 1967.

(4) Some companies identified originally as having less than 10 employees were found to have been out of business in 1967.

Another factor tended to reduce the value of products not specified by kind attributed to small companies, thus affecting tabel I particularly. This was the fact that some 4-digit industries were represented by only one product category (an example is industry 3273, Ready-Mixed Concrete). Administrative-record estimates for products such as this were treated as specific information and not tabulated under the "not specified by kind" heading.

These factors taken together explain why the value of products "not specified by kind" attributed to small companies in table I is only 1 percent of the total, while the 157,000 establishments with less than 10 employees account for 2.3 percent of the total.

The data for many of the specific 7-digit products shown in table 6A are understated.

16. DUPLICATION IN COST OF MATERIALS AND VALUE OF PRODUCTS

The aggregate of the cost of materials and value of shipments figures for industry groups and for all manufacturing industries includes large amounts of duplication since the products of some industries are used as materials by others. With some important exceptions, such as SIC 3312, Blast Furnaces and Steel Mills, this duplication is not significant within individual 4-digit industries. However, it is significant at the 2-digit and 3-digit industry level because these group totals often include industries which represent successive stages in the production of a finished manufactured product. Examples are the addition of flour mills to bakeries in the total value of shipments of SIC Major Group 20 and the addition of pulpmills to papermills in Group 26. Economists have estimated that the value of manufactured products exclusive of such duplication—the value of finished manufactures—tends to approximate two-thirds of the total value of shipments reported in the census of manufactures.

Because the amounts of duplication contained in the cost of materials and value of products figures cannot be measured with any degree of precision, caution is urged with their use when they are provided at the 2- and 3-digit industry group level.

Even where no significant amount of duplication is involved, value of shipments figures are of limited use as measures of the relative economic importance of individual manufacturing industries or geographic areas because of the wide variation in ratio of materials, labor, and other processing costs to value of shipments, both among industries and within the same industry. To a large extent, value added by manufacture does not have these limitations and is therefore a better measure for comparison.

17. VALUE ADDED BY MANUFACTURE

General.—Value added by manufacture is derived by subtracting the total cost of materials (including materials, supplies, fuel, electric energy, cost of resales, and miscellaneous receipts) from the value of shipments (including resales) and other receipts and adjusting the resulting amount by the net change in finished products and work-in-process inventories between the beginning and end of the year.[21]

Value added avoids the duplication in the value of shipments figure which results from the inclusion of the shipments of establishments producing materials and components along with the shipments of establishments producing finished products. It does not exclude purchased business services, as does the national income concept described below.[22] Nevertheless, it is considered to be the best value measure now available for comparing the relative economic importance of manufacturing among industries and geographic areas.

---

[21] For a few industries (for example, aircraft, ship building) where value of work done is substituted for value of shipments, no adjustment is made for change in inventories. In a few other industries where value of production is collected, the inventory adjustment is made only on the basis of change in work-in-process inventories.

[22] Collection of data on the cost of purchased business services at the plant level presents many problems. Advertising by multiunit companies, for example, is frequently charged at the company level and the cost either not allocated, to plants or if allocated, only as part of a broader company overhead category. National income data, on the other hand, are compiled in part from company rather than plant data, such as the IRS *Statistics of Income* in which advertising is presented as a separate cost item based on company reports.

TABLE J. Comparison of National Income Originating and Value Added by Major Industry Group: 1967

(Billions of dollars)

SIC code	Industry group description	National income originating[1] (1)	Value added by manufacturing (2)	Col. (1) divided by col. (2)
	Manufacturing	195.2	262.0	0.75
	Nondurable goods	75.5	109.5	.69
20	Food and kindred products	16.3	26.6	.61
21	Tobacco manufactures	1.3	2.0	.65
22	Textile mill products	6.2	8.2	.76
23	Apparel and other fabricated textile products	7.5	10.1	.74
26	Paper and allied products	6.7	9.8	.68
27	Printing, publishing, and allied industries	9.9	14.4	.69
28	Chemicals and allied products	14.1	23.6	.60
29	Petroleum refining and related industries	6.5	5.4	1.20
30	Rubber and miscellaneous plastics products	4.7	6.8	.69
31	Leather and leather products	2.2	2.6	.85
	Durable goods	119.7	152.7	.78
24	Lumber and wood products, except furniture	4.2	5.0	.84
25	Furniture and fixtures	3.2	4.2	.76
32	Stone, clay, and glass products	5.8	8.4	.69
33	Primary metal industries	15.3	20.0	.77
34	Fabricated metal products	13.4	18.0	.74

36	Electrical machinery	18.6	24.5	.76
19, 37	Transportation equipment and ordnance, except motor vehicles	15.3	33.8	.86
	Motor vehicles and motor vehicle equipment	13.6		
38	Instruments	5.2	6.4	.81
39	Miscellaneous manufacturing industries	3.3	4.6	.72

[1] Source: Survey of Current Business, July 1970.

National income originating in the manufacturing sector, as developed in the national accounts maintained by the Office of Business Economics (OBE) is somewhat similar to value added in concept, but there are important differences. National income is the aggregate earnings of labor and capital which arise in the current production of goods and services in the manufacturing sector. Thus it measures the total factor costs incurred, and is a more "net" conception of value added than that which it has been found feasible to compile in the economic censuses, on an establishment basis. National income excludes, in addition to cost of materials, such other costs as depreciation charges, State and local taxes (other than corporate income taxes), allowance for bad debts, and purchases of services from nonmanufacturing enterprises, such as contract costs involved in maintenance and repair, services of development and research firms, services of engineering and management consultants, advertising, telephone and telegraph expense, insurance, royalties, patent fees, etc.

In part, the national income estimates are prepared from company rather than establishment data. This method results in the inclusion of some part of the net value added by nonmanufacturing establishments of companies classified as being primarily manufacturing, and conversely, in the exclusion of some part of the net value added by manufacturing establishments of companies classifed as primarily nonmanufacturing. It is believed that for manufacturing as a whole the net effect increases national income. In the Petroleum and Coal Products major industry group, nonmanufacturing activities of manufacturing companies are so significant that this is the one group in which national income exceeds value added, as shown in table J.

Historical Comparison.—Whatever changes have taken place in the relative importance of the costs included in value added but excluded from national income have been gradual. As shown in table K, the ratio between the two figures has been fairly constant over the past decade, and the 1967 ratio is rather close to that for 1939.

TABLE K. National Income Originating in Manufacturing and Value Added by Manufacture: 1939 to 1967

(Billions of dollars)

Year	National income originating in manufacturing (1)	Value added by manufacture (2)	Col. (1) divided by col. (2)
1967.....	195.2	262.0	0.75

[1]Unadjusted.

Reconciliation with National Income Components.—Figures are not available to permit a reconciliation of the estimates for value added in manufacturing and the national income originating in manufacturing for the current period. However, in 1957, the Census Bureau conducted a special survey, MC-D11, "Selected Costs and Assets of Manufacturing Establishments," which collected information on some of the costs included in value added for services purchased from other sectors or excluded from the national income estimates. These specific costs which accounted for about $15 billion of the $148 billion of value added in 1957 were maintenance and repairs, $4.5 billion; insurance, $.7 billion; property taxes, $1.5 billion; rental payments, $1.4 billion; and depreciation, $7.3 billion. The residual value added, $132 billion, was approximately $16 billion in excess of national income of $116 billion.

Table L presents an approximate reconciliation of national income and value added figures for manufacturing in 1957. The national income estimates for payrolls and other factor income in that year are based on the unrevised national income figures which are somewhat lower than the revised estimate appearing in table K. It should be noted that the labor costs included in national income and value added are reasonably close despite the fact that they are computed on a slightly different basis. If the proprietary and profit incomes of the company-based national income estimates are allocated to the establishments included in the census of manufactures, value added exceeds national income by $35 billion of which $15 billion is attributable to costs reported on survey MC-D11. Somewhat more than half of the $35 billion excess represents the inclusion in value added by manufacture of purchased business services arising in other economic sectors; the remainder reflects conceptual differences arising from the inclusion, in value added, of indirect business taxes and depreciation which are excluded by definition from national income.

18. CAPITAL EXPENDITURES

Under this heading, manufacturers were instructed to report expenditures of the type chargeable to fixed assets accounts, for which depreciation reserves are normally maintained. Actual capital outlays during the year were requested, not the final value of equipment put in place or structures completed during the year.

The Census Bureau estimates of capital expenditures tend to be lower than those published in the joint Office of Business Economics-Securities and Exchange Commission survey. In addition to normal sampling variation, a major source of difference is to be found in the scope of the two series. Census data relate only to manufacturing establishments, whereas the OBE-SEC series covers all establishments of manufacturing companies—nonmanufacturing as well as manufacturing. This factor is particularly important in the petroleum industry where company expenditures for developing new wells and new distribution facilities are ordinarily much larger than their capital expenditures at refineries. On the other hand, manufacturing establishments of companies engaged primarily in nonmanufacturing activities are excluded from the OBE-SEC series but included in census figures. The OBE-SEC and census data for recent years are shown in tables M and N.

19. PLANT SPECIALIZATION

As discussed in section 4 above, the primary products of a plant are those which determine its industry classification; all other products are referred to as secondary products. The value of a plant's primary products in comparison to its total production is referred to as its degree of specialization. For each plant, two

TABLE L. 1957 Comparative Statistics on Value Added and National Income in Manufacturing

(Billions of dollars)

Item	Value added	National income[1]
Total	147.8	112.5
Payrolls	89.4	87.9
Payrolls of operating manufacturing establishments	76.4	[2]80.6

TABLE M. Expenditures for New Plant and Equipment–OBE–SEC Series and Census: 1967 and Earlier Years

(Billions of dollars)

Year	OBE–SEC series 1[1] (1)	Census (census of manufactures and ASM) (2)	Col. (2) divided by col. (1)
1967	26.7	[2]21.4	[2]0.80
1966	27.0	20.2	.75
1965	22.5	16.6	.74
1964	18.6	13.3	.72
1963	15.7	11.4	.73
1962	14.7	10.0	.68
1961	13.7	9.8	.72
1960	14.5	10.0	.69
1959	12.1	9.3	.77
1958	11.4	9.6	.84
1954	11.0	8.2	.74
1947	8.7	[3]6.0	.69

[1]Source: 1969 Business Statistics, Office of Business Economics, issued September 1969.
[2]Preliminary.
[3]Excludes data for establishments under construction but not yet in operation.

measures of specialization were computed: (1) A 4-digit primary product-specialization ratio, which is the sum of the values of all the plant's primary products divided by the sum of all its primary and secondary products; and (2) a 5-digit primary product-class specialization ratio, which is the sum of the largest 5-digit product-class value divided by the sum of its primary and secondary products (the miscellaneous receipts of the establishment were not included in these calculations). For example, assume that an establishment reported the following:

Total value of shipments and other receipts	$1,000
Miscellaneous receipts (resales, etc.)	15
Total value of products shipped	985
32721 Concrete pipe products	100
32722 Precast concrete products	785
32730 Ready-mixed concrete	100

This plant would be coded into SIC industry 3272, Concrete Products, with a primary product specialization ratio of 90 percent ($885÷985); it would be subclassified into the 5-digit class 32722, Precast Concrete, with a primary product class specialization ratio of 80 percent ($785÷985).

In the 1967 census, selected general statistics (number of establishments, employment, payrolls, value added, cost of materials, value of shipments, and capital expenditures) were tabulated to primary product-class levels by assigning the plant totals to the principal 5-digit codes. These data are presented in table 8 of the industry chapters, Volume II. For most product

classes, table 8 also provides general statistics for establishments specializing in the class to the extent of 75 percent or more.

Table 8 permits analysis of an industry in terms of the differences introduced by variation among establishments in the degree of specialization in the products of the industry or a subgroup (5-digit). For example, where the ratios among various statistics tend to be different for establishments specializing to different degrees in the products of the industry or in different product classes, the ratios for the industry as a whole would be significantly affected by changes in its product mix.

20. OPERATING RATIOS

Since all of the data collected in the census on establishment reports are interrelated, comparisons of the various measures of activity are of considerable interest. Beginning with the 1963 census, several ratios have been routinely computed and presented in the industry chapters of Volume II. For 1967 and earlier years, the following nine ratios were published for each 4-digit industry:

Payroll per employee
Production workers as percent of total employment
Annual man-hours of production workers
Average hourly earnings of production workers
Cost of materials per dollar of shipments
Cost of materials and payrolls per dollar of shipments
Value added per employee
Payrolls as percent of value added
Value added per man-hour of production worker

21. SUBJECT REPORTS SHOWN IN VOLUME I, SUMMARY AND SUBJECT STATISTICS

Volume I includes 3 tables representing summaries of rearrangements of data appearing in the industry and area volumes, and 2 special reports presenting statistics which are not published elsewhere. The contents of Volume I are as follows:

Chapter 1. General Summary.—This chapter, which appears in other volumes as well as Volume I, provides summary tabulations of data presented in greater detail in other census tables.

Chapter 2. Size of Establishments.—This chapter provides a summary of the general statistics by size of establishment which appear in table 4 of the industry chapters, Volume II. Also included are data on central administrative offices and auxiliary establishments, classified by size.

Chapter 3. Type of Organization.—This report presents data for manufacturing establishments classified as to the legal form of ownership (corporate, individual proprietor, or partnership) and as to whether the owner was a multiunit or single-unit company.

Chapter 4. Manufacturers' Inventories.—These tables summarize the inventory data published in table 3 of the industry chapters, Volume II. A description of the statistics is given in appendix A.

Chapter 5. Expenditures for Plant and Equipment.—These tables summarize the expenditures data published in table 3 of the industry chapters, Volume II. A description of the data is given in appendix A and in section 18, "Capital Expenditures."

Chapter 6. Materials Consumed.—This chapter consists of a compilation of detailed statistics on consumption of materials, fuels, and electricity. These figures also appear in Volume II, Industry Statistics, as tables 7A and 7B.

Chapter 7. Water Use in Manufacturing.—This report presents the results of a survey of the 1968 consumption of water in establishments consuming 20 million gallons or more annually. A more detailed description of the report and definitions of the terms employed, is given in the introduction to chapter 7.

Chapter 8. Selected Metalworking Operations.—This report presents the results of an inquiry concerning employment in metalworking plants such as foundry, forge shop, die casting department, heat treating, etc. The number of establishments in which these facilities are operated is presented, as well as the number of production workers engaged.

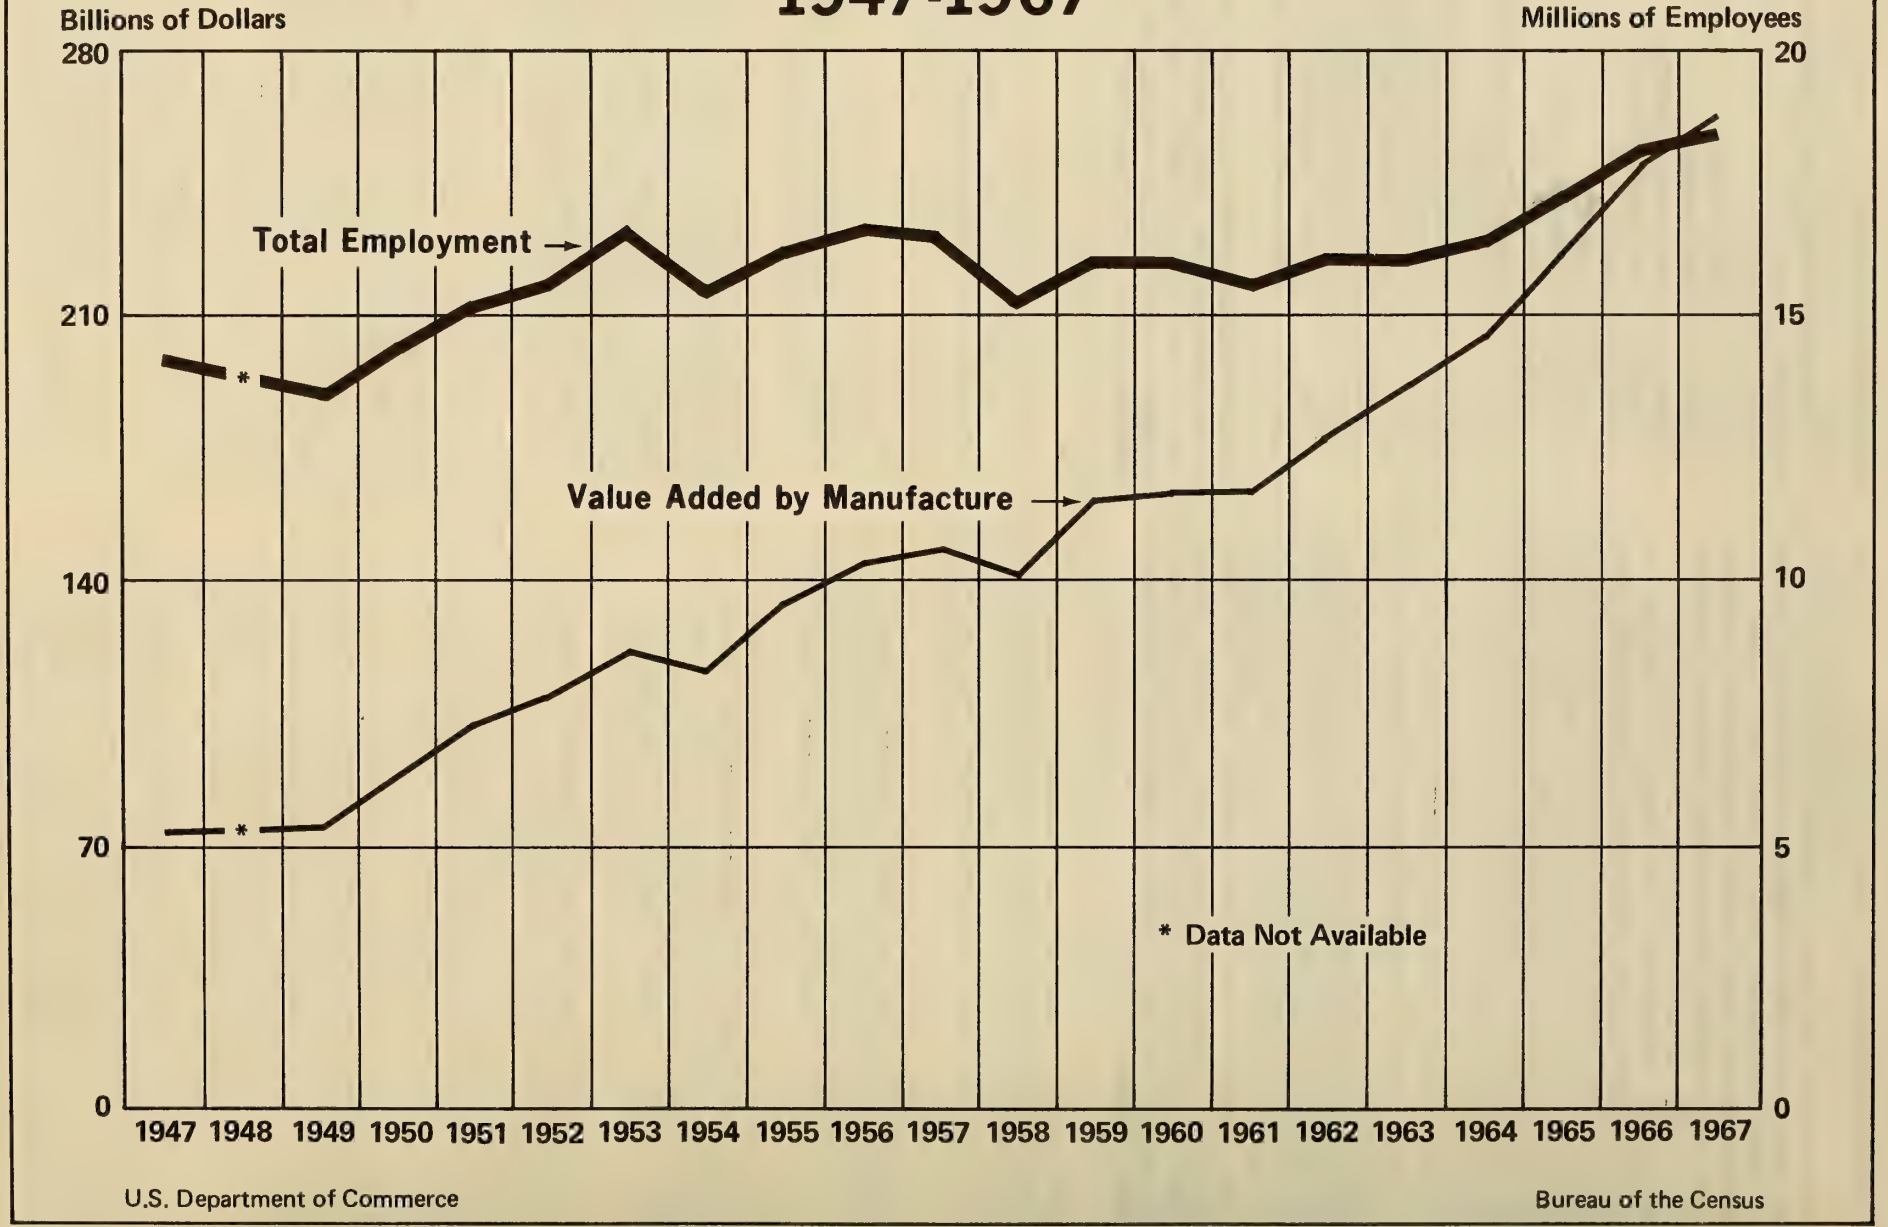
Chapter 9. Concentration Ratios.—This special report presents concentration ratios and other information on the share of industrial activity accounted for by the largest companies, both for the United States as a whole and for each of the 420 manufacturing industries. A more detailed description of the report, and explanations of the terms employed, is given in the introduction to chapter 9.

Chapter 10. Manufacturing Activity in Government Establishments.—This special report presents data on manufacturing activities in selected types of government establishments in the United States. The statistics are not included in other census of manufactures tables, which cover only privately operated establishments. A more detailed description of the report is given in the introduction to chapter 10.

22. CONFIDENTIALITY

The Bureau of the Census is prohibited by law from publishing any statistics that disclose information reported by individual companies. In suppressing figures to avoid disclosing information of individual companies, geographic region and division totals are given precedence over individual States; States are given precedence over standard metropolitan statistical areas; standard metropolitan statistical areas over counties; and counties over cities. In tables showing industry detail, major industry group (2-digit) totals take preference over industry group (3-digit) totals which, in turn, take precedence over individual (4-digit) industries. Similarly, in product tables, 4-digit product groupings take precedence over 5-digit product classes and the latter over individual 7-digit products.

Such order of precedence was used because (1) it was considered preferable to show regional data for an industry, even at the cost of withholding data for another (usually the least significant) State in a region, rather than to show all publishable data for the individual States and group the disclosure States throughout the United States in an "all other" category as was done in the 1939 and earlier censuses; and (2) by giving preference to industry-group statistics over individual industries within each State, the extent to which individual States can be compared within the SIC industry classification framework is greatly increased.



23. ABBREVIATIONS

The following abbreviations and symbols occur frequently in text, tables, and footnotes:

–	Zero
X	Not applicable
NA	Not available
n.e.c.	Not elsewhere classified
n.s.k.	Not specified by kind
lin.	Linear
equiv.	Equivalent
hp	Horsepower
kw.-hrs.	Kilowatt-hours
D	Withheld to avoid disclosing figures for individual companies
SIC	Standard Industrial Classification
IRS	Internal Revenue Service
SSA	Social Security Administration
ASM	Annual Survey of Manufactures
CIR	Current Industrial Reports
OBE	Office of Business Economics
SEC	Securities and Exchange Commission

Other abbreviations, such as lb., gal., yd., doz., and bbl., are used in the customary sense. Where the term "tons" only is used, it refers to short tons of 2,000 pounds; where the figures are expressed in tons of 2,240 pounds, the unit of measure is specified as "long tons" or "gross tons."

Value Added by Manufacture and Total Employment: 1947-1967

U.S. Department of Commerce

Bureau of the Census

Furniture and Fixtures

25A Household furniture

25B Office, public building, and miscellaneous furniture; office and store fixtures.

This major group includes establishments engaged in manufacturing household, office, public building, and restaurant furniture; and office and store fixtures. Establishments primarily engaged in the production of millwork are classified in industry 2431, and woodworking to individual order or in the nature of reconditioning and repair in nonmanufacturing industries.

TABLE 1. General Statistics: 1967 and Earlier Years

(See Appendix, Explanation of Terms)

Year and item	Establishments		All employees[1]		Production workers			Value added by manufacture, adjusted	Cost of materials[3]	Value of shipments[3]	Capital expenditures, new[4]
	Total (number)	With 20 employees or more (number)	Total (1000)	Payroll (million dollars)	Total (1000)	Man-hours (millions)	Wages (million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)
ALL MANUFACTURING ESTABLISHMENTS, TOTAL:											
1967	10 077	3 488	430.0	2 305.1	357.5	715.7	1 653.7	4 169.5	3 619.6	7 749.8	198.0

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.

[1]The figures for 1939 through 1967 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known.

[2]For the period 1954 to 1967, figures represent adjusted value added by manufacture and earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. For 1899 to 1933 cost of contract work was not subtracted from value of products in calculating value added by manufacture.

[3]The total value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry classification. For a more complete explanation see Introduction.

[4]The figures for 1958 to 1967 include expenditures for plants under construction and not yet in operation.

[5]The figures for 1939 to 1967 include data for establishments primarily engaged in manufacture of metal partitions, classified for earlier years in the fabricated metal products industries. Value added by manufacture for 1939, excluding data for these establishments, was $410.7 million.

[6]Similar data are shown for the years 1949 to 1953 in the annual survey of manufactures volumes. Data for these establishments are not available for the years 1955 to 1957, 1959 to 1962, 1964 to 1966, or prior to 1949.

[7]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufacturers. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufacturers volumes for this period.

[8]The figures for 1937 and later years include data for establishments primarily engaged in manufacture of venetian blinds, included for earlier years in the series for the lumber and wood products, except furniture industries. Value added by manufacture for 1937, excluding data for these establishments and therefore on a basis comparable with 1935, was $417.7 million.

[9]The figures for 1899 to 1925 do not include data for establishments primarily engaged in manufacture of sewing machine cases, cabinets, and tables, classified for these years in the machinery (except electrical) industries.

[10]The figures for 1899 to 1909 do not include data for establishments primarily engaged in manufacture of window and door screens, included for these years in the series for the lumber and wood products, except furniture industries. Value added by manufacture for 1914 excluding data for these establishments and on a basis comparable with 1909, was $169.4 million.

TABLE 2. General Statistics, by Geographic Areas: 1967 and 1963

(See Appendix, Explanation of Terms)

Code	Industry and geographic area[1]	1967											1963	
		Establishments		All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials[2] (million dollars)	Value of shipments[2] (million dollars)	Capital expenditures, new (million dollars)	All employees (1,000)	Value added by manufacture (million dollars)
		Total (number)	With 20 employees or more (number)	Number (1,000)	Payroll (million dollars)	Number (1,000)	Man-hours (millions)	Wages (million dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]The value of shipments and cost of materials for industry groups (2- and 3-digit) includes extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

USED PLANT AND EQUIPMENT ..... DO	12.4	8.0	.3	.7	2.8	.6

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation to Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Under 50 thousand (or under 50 employees).

[1]The value of shipments and cost of materials for industry groups (2- and 3-digit) includes extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

HOUSEHOLD FURNITURE

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2511--Wood Household Furniture, Except Upholstered
2512--Wood Household Furniture, Upholstered
2514--Metal Household Furniture
2515--Mattresses and Bedsprings
2519--Household Furniture, Not Elsewhere Classified

Establishments primarily engaged in making furniture to order of individual household consumers or primarily engaged in renovating furniture or mattresses are classified in nonmanufacturing industries. Establishments primarily engaged in making furniture parts (except wood frames or headboards) are not included in this group of industries but are generally classified in Major Group 24, Lumber and Wood Products or Major Group 34, Fabricated Metal Products. For example, furniture turnings are included in industry 2499, Wood Products, N.E.C., and furniture hardware, including casters are included in industry 3429, Hardware, N.E.C.

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

2511--WOOD HOUSEHOLD FURNITURE EXCEPT UPHOLSTERED

This industry comprises establishments primarily engaged in manufacturing wood household furniture commonly used in dwellings. This industry also includes the manufacture of wood kitchen cabinets on a factory basis, and camp furniture. Establishments primarily engaged in manufacturing upholstered furniture are classified in industry 2512, and reed and rattan furniture in industry 2519. For a detailed list of products of industry 2511, refer to table 6A, product codes 2511745 to 2511761.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Wood Household Furniture Industry in 1967 totaled $2,438.9 million. This included shipments of wood household furniture (primary products), valued at $2,212.4 million, shipments of other products (secondary products

valued at $116.6 million, and miscellaneous receipts (mainly sales of products bought and resold without further manufacture) of $109.9 million.

This industry's shipments of wood household furniture (primary products) in 1967 represented 95 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 94 percent. Secondary products shipped by this industry in 1967 consisted mainly of upholstered household furniture ($41.5 million), and products of purchased glass ($16.9 million).

Industry 2511 shipments of wood household furniture (primary products) in 1967 represented 96 percent (coverage ratio) of these products valued at $2,300.1 million shipped by all industries. In 1963, the coverage ratio was 96 percent. Other industries shipping wood household furniture (primary products) consisted mainly of industry 2512, Upholstered Household Furniture, $25.8 million; industry 2431, Millwork, $11.9 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2511, these establishments accounted for approximately 2.5 percent of payroll and 3.0 percent of value added by manufacture.

2512--WOOD HOUSEHOLD FURNITURE, UPHOLSTERED

This industry comprises establishments primarily engaged in manufacturing upholstered furniture on wood frames, or manufacturing wood frames for upholstered furniture. Shops primarily engaged in reupholstering furniture, or upholstering frames to individual order, are classified in nonmanufacturing industries. Establishments primarily engaged in manufacturing dual purpose sleep furniture, such as studio couches, sofa beds, and chair beds are classified in industry 2515, Mattresses and Bedsprings, regardless of the material used in the frame. For a detailed list of products of industry 2512, refer to table 6A, product codes 2512112 to 2512611.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Upholstered Household Furniture Industry in 1967 totaled $1,266.4 million. This included shipments of upholstered household furniture (primary products), valued at $1,142.1 million, shipments of other products (secondary products) valued at $91.9 million, and miscellaneous receipts (mainly sales of products bought and resold without further manufacture) of $32.3 million.

This industry's shipments of upholstered household furniture (primary products) in 1967 represented 93 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 92 percent. Secondary products shipped by this industry in 1967 consisted mainly of mattresses and bedsprings ($46.6 million), and wood household furniture ($25.8 million).

Industry 2512 shipments of upholstered household furniture (primary products) in 1967 represented 94 percent (coverage ratio) of these products valued at $1,215.5 million shipped by all industries. In 1963, the coverage ratio was 92 percent. Other industries shipping upholstered household furniture (primary products) consisted mainly of industry 2511, Wood Household Furniture, $41.5 million; industry 2515, Mattresses and Bedsprings, $25.8 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other

Government agencies and the remaining statistics estimated from industry averages. For industry 2512, these establishments accounted for approximately 2.0 percent of payroll and 2.2 percent of value added by manufacture.

2514--METAL HOUSEHOLD FURNITURE

This industry comprises establishments primarily engaged in manufacturing metal household furniture of a type commonly used in dwellings, whether padded or plain. Establishments primarily engaged in manufacturing dual purpose sleep furniture, such as studio couches, sofa beds, and chair beds, are classified in industry 2515, regardless of the material used in the frame. For a detailed list of products of industry 2514, refer to table 6A, product codes 2514111 to 2514498.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Metal Household Furniture Industry in 1967 totaled $605.3 million. This included shipments of metal household furniture (primary products), valued at $529.4 million, shipments of other products (secondary products) valued at $58.4 million, and miscellaneous receipts (mainly sales of products bought and resold without further manufacture) of $17.5 million.

This industry's shipments of metal household furniture (primary products) in 1967 represented 90 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 88 percent. Secondary products shipped by this industry in 1967 consisted mainly of fabricated metal products n.e.c. ($5-$10 million), and furniture and fixtures, n.e.c. ($5.2 million).

Industry 2514 shipments of metal household furniture (primary products) in 1967 represented 90 percent (coverage ratio) of these products valued at $587.8 million shipped by all industries. In 1963, the coverage ratio was 89 percent. Other industries shipping metal household furniture (primary products) consisted mainly of industry 2515, Mattresses and Bedsprings, $10.8 million; industry 3943, Children's Vehicles, Except Bicycles, $5.6 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2514, these establishments accounted for approximately 1.1 percent of payroll and 1.3 percent of value added by manufacture.

2515--MATTRESSES AND BEDSPRINGS

This industry comprises establishments primarily engaged in manufacturing innerspring mattresses, box spring mattresses, and noninnerspring mattresses containing felt, foam rubber, or any other filling material; and assembled wire springs (fabric, coil, or box) for use on beds, couches, and cots. This industry also includes establishments primarily engaged in manufacturing dual purpose sleep furniture, such as studio couches, sofa beds, and chair beds regardless of the material used in the frame. Establishments primarily engaged in manufacturing automobile seats and backs are classified in industry 2531; individual wire springs in industry 3481; and paddings and upholstery filling in industry 2293. For a detailed list of products of industry 2515, refer to table 6A, product codes 2515115 to 2515611.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Mattresses and Bedsprings Industry in 1967 totaled $745.1 million. This included shipments of mattresses and bedsprings (primary products), valued at $648.0 million, shipments of other products (secondary products) valued at $66.1 million, and miscellaneous receipts (mainly sales of products bought and resold without further manufacture) of $31.0 million.

This industry's shipments of mattresses and bedsprings (primary products) in 1967 represented 91 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 90 percent. Secondary products shipped by this industry in 1967 consisted mainly of upholstered household furniture ($25.8 million), and metal household furniture ($10.8 million).

Industry 2515 shipments of mattresses and bedsprings (primary products) in 1967 represented 91 percent (coverage ratio) of these products valued at $709.6 million shipped by all industries. In 1963, the coverage ratio was 90 percent. Other industries shipping mattresses and bedsprings (primary products) consisted mainly of industry 2512, Upholstered Household Furniture, $46.6 million; industry 2511, Wood Household Furniture, $5.6 million.

As indicated in the introduction, small establishments generally with less then 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2515, these establishments accounted for approximately 3.0 percent of payroll and 3.5 percent of value added by manufacture.

2519--HOUSEHOLD FURNITURE, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing reed, rattan and other wicker furniture, and household furniture, not elsewhere classified. For a detailed list of products of industry 2519, refer to table 6A, product codes 2519011 to 2519098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Household Furniture, N.E.C., Industry in 1967 totaled $55.3 million. This included shipments of household furniture, n.e.c. (primary products), valued at $43.9 million, shipments of other products (secondary products) valued at $8.8 million, and miscellaneous receipts (mainly sales of products bought and resold without further manufacture) of $2.6 million.

This industry's shipments of household furniture, n.e.c., (primary products) in 1967 represented 83 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 84 percent.

Industry 2519 shipments of household furniture, n.e.c., (primary products) in 1967 represented 56 percent (coverage ratio) of these products valued at $79.0 million shipped by all industries. In 1963, the coverage ratio was 51 percent. Another industry shipping household furniture, n.e.c., (primary products) consisted mainly of industry 3079, Miscellaneous Plastics Products, $23.7 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2519, these establishments accounted for approximately 1.4 percent of payroll and 1.3 percent of value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	End-of-year inventories	Specialization ratio	Coverage ratio
	Total (number)	With 20 employees or more (number)	Number (1,000)	Payroll (million dollars)	Number (1,000)	Man-hours (millions)	Wages (million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(percent)	(percent)

Note: In 1967, 1963, and 1958, the number of companies in industry 2511 was 2,934, 2,937, and 2,742, respectively; in industry 2512: 1,582, 1,729, and 1,707; industry 2514: 464, 508, and 613; industry 2515: 939, 1,066, and 1,158; industry 2519: 75, 72, and 96.

Standard notes: ~ Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than $50 thousand.

*These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry. Data prior to 1963 exclude Alaska and Hawaii to avoid disclosing individual company figures.

TABLE 1B. Selected Operating Ratios: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. e For 1967, over 30 percent of the data for this line was estimated.

[1] General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols: AA - less than 250 employees; BB - 250-499 employees; CC - 500-999 employees; EE - 1,000-2,499 employees; FF - 2,500 employees and over.

[2] This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: (Z) Under 50 thousand.

[1] The proportion of product shipments (both primary and secondary) of the industry represented by primary products.

[2] The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Expalnation of Terms.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees.)

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

[2]Includes an unspecified amount for plants under construction but not in operation.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Ind. code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. B+C (percent)	Total, made in all industries (million dollars)	Made in this industry (million dollars)	Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)
		A	B	C	D	E	F	G	H	I

Note: See Appendix, Explanation of Terms, for discussion of items.

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not Applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Total shipments including interplant transfers			
		1967		1963	
		Quantity (1,000 units)	Value (million dollars)	Quantity (1,000 units)	Value (million dollars)
2519- --	HOUSEHOLD FURNITURE, N.E.C.	(X)	79.0	(X)	46.9
25190 11	Plastic cabinets, radio, phonograph, TV, Hi-Fi, and combinations thereof	(NA)	26.1	12,674	17.4
25190 32	Reed and rattan furniture, including willow, wicker, and cane	(X)	11.1	(X)	8.8
25190 98	Other household furniture, including plastic furniture	(X)	31.8	(X)	16.9
25190 00	Other household furniture, n.e.c., n.s.k. (For companies with 10 or more employees. See Note.)	(X)	9.2	(X)	3.8
25190 02	Other household furniture, n.e.c., n.s.k. (For companies with less than 10 employees. See Note.)	(X)	0.8		

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 19 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases in the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computed operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. e From 10 to 30 percent of this figure was estimated.

[1]Estimates of monthly shipments of mattresses and bedsprings have been published since 1957 in Current Industrial Reports M25E, Mattresses and Bedsprings.

[2]For 1963 all crib mattresses made of latex foam, urethane foam or cotton felt were combined with adult size mattresses made of the same materials; crib size mattresses made with innersprings were reported separately. Beginning with 1967, respondents were requested to separate shipments of all crib mattresses from adult size mattresses made of the same materials. Thus, totals shown for these items for 1967 are not comparable to the figures reported on these lines for 1963.

[3]For 1963, the figure shown for springs cushions includes shipments of air-cooled auto seat cushions.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments	
	1967	1963
RADIO, PHONOGRAPH, AND TELEVISION WOOD CABINETS (25111)		
United States	257.8	158.5

North Central Region	4.1	(NA)
East North Central Div.	AA	(NA)
West North Central Div.	BB	(NA)
Kansas	AA	(NA)
South Region	3.3	(NA)
East South Central Div.	AA	(NA)
Mississippi	AA	(NA)
West Region	4.5	(NA)
Pacific Div.	BB	(NA)
California	BB	(NA)

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of terms, for discussion of items.

[1]This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

TABLE 6C. Product Classes–Quantity and Value Shipped by All Manufacturing Establishments: 1947, 1954, 1958, 1963 to 1967

Code	Product class	1967	1966[1]	1965[1]	1964[1]	1963	1958	1954	1947

25190	Household furniture, n.e.c.....do....	79.0	70.9	65.1	51.9	46.9	35.3	21.7	16.3

Standard Notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses in the value of shipments columns either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.

[2]Because some small producers reported values only for these product classes, estimates for quantities are included for these values as follows:

Product class	Percent of total value for which quantity was estimated
25111	1.7
25154	0.6
25155	2.0
25156	-

[3]Direct comparisons of 1954-1947 data are not possible since shipments reported for this product class in 1947 were restricted to assembled cabinets and other cabinets (not to be built-in). In 1947 shipments of unassembled cabinets and cabinets to be combined with other units to form a built-in unit were treated as products primary to the millwork industry, code 24314.

[4]In 1967, innerspring mattresses for cribs and spring cushions were included with product class 25152, "Other Mattresses, Including Crib Mattresses." For 1966 and prior years, these items were included with product class 25151, "Innerspring Mattresses, Other Than Crib Size." Thus, totals for these product classes for 1967 are not comparable for 1966 and prior years.

[5]Includes an estimated overstatement, for value of shipments of $12 million resulting from the erroneous classification of bedspring components and industrial springs as bedsprings by a limited number of establishments.

[6]Includes value of shipments only, quantity totals are not available for 1947 for these product classes.

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963

970099	All other materials and components, parts, containers, and supplies consumed, n.e.c		(X)	88.6	(X)	67.2
970000	All other materials and components, parts, containers, and supplies, n.s.k[1]		(X)	48.0	(X)	54.1

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. eOver 30 percent of the data for this line was estimated.

[1]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967, this includes estimates for companies that were not mailed report forms.

TABLE 7B. Fuels and Electric Energy Consumed: 1967

(See Appendix, Explanation of Terms)

Code	Item	Unit of measure	Wood household furniture (SIC 2511)
	Cost of purchased fuels and electric energy, total....	Million dollars.	21.2
121005	Cost of purchased fuels, total.....	...do.....	6.3
121005	Coal (anthracite, bituminous, and lignite):.....		
	Quantity.....	1,000 short tons	198.1
	Cost.....	Million dollars.	1.7
	Fuel oil, total:		
	Quantity.....	1,000 barrels...	251.0
	Cost.....	Million dollars.	1.1
291141	Distillate:		
	Quantity.....	1,000 barrels...	102.9
	Cost.....	Million dollars.	.5
291151	Residual:		
	Quantity.....	1,000 barrels...	148.1
	Cost.....	Million dollars.	.6
131300	Gas (natural, manufactured mixed, blast-furance, coke-oven, and other gas):		
	Quantity.....	Million cu. ft..	1,699.4
	Cost.....	Million dollars.	1.1
96001	Other fuels (gasoline, LPG, wood, etc.....	...do.....	.3
	Fuels, n.s.k.....	...do.....	2.2
	Purchased electric energy:		
	Quantity.....	Million kw.-hrs.	1,049.1
	Cost.....	Million dollars.	14.9
	Quantity of electric energy generated less quantity sold.....	Million kw.-hrs.	46.4
	Total energy used for heat and power[1].....	Million kw.-hrs. equivalent.....	4,758.9

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available.
(D) Withheld to avoid disclosing figures for individual companies.
[1]Represents the quantity of purchased electric energy and the kilowatt hours equivalent of all fuels used for heat and power.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees: Number (1,000)	All employees: Payroll (million dollars)	Production workers: Number (1,000)	Production workers: Man-hours (millions)	Production workers: Wages (million dollars)	Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)

TABLE 9. Mattress Shipments By Size: 1967

Mattresses	[1] Quantity (1,000 units)	Value of shipments[2] (million dollars)
SUPERSIZE MATTRESSES, INCLUDING URETHANE, LATEX, INNERSPRING AND ALL OTHER TYPES, TOTAL	1,711.7	67.1
39 inches wide by 80 inches long	402.2	10.4
54 inches wide by 80 inches long	173.3	5.3
60 inches wide by 80 inches long	586.0	23.8
72 inches wide by 84 inches long	197.1	9.1
76 or 78 inches wide by 80 inches or more long	293.8	16.4
Other supersize mattresses not listed above over 54 inches wide or over 75 inches long	59.3	2.1
STANDARD SIZE MATTRESSES, ALL TYPES EXCEPT CRIB SIZE	8,657.4	212.2
TOTAL ALL MATTRESSES, EXCEPT CRIB SIZE[3]	10,369.1	279.3
Total mattresses except crib size as reported in table 6A (sum of product codes 2515115, 2515231, 2515237 and 2515245)	10,659.4	284.5

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

[1] Quantity was estimated for those establishments which reported value of shipments without quantity. The total quantity estimated was between 5 and 15 percent of total mattress shipments.

[2] Value of shipments. The total value of shipments estimated was between 5 and 15 percent of total mattress shipments.

[3] Totals do not agree with the corresponding totals in table 6A by small amounts because of inconsistencies in reporting.

OFFICE, PUBLIC BUILDING, AND MISCELLANEOUS FURNITURE; OFFICE AND STORE FIXTURES

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2521--Wood Office Furniture
2522--Metal Office Furniture
2531--Public Building and Related Furniture
2541--Wood Partitions, Shelving, Lockers and Office and Store Fixtures
2542--Metal Partitions, Shelving, Lockers and Office and Store Fixtures
2591--Venetian Blinds and Shades
2599--Furniture and Fixtures, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

2521--WOOD OFFICE FURNITURE

This industry comprises establishments primarily engaged in manufacturing wood office furniture, whether padded, upholstered or plain. For a detailed list of products of industry 2521, refer to table 6A, product codes 2521011 to 2521098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Wood Office Furniture Industry in 1967 totaled $158.3 million. This included shipments of wood office furniture (primary products), valued at $136.0 million, shipments of other products (secondary products) valued at $16.8 million, and miscellaneous receipts (mainly sales of products bought and resold without further manufacture) of $5.6 million.

This industry's shipments of wood office furniture (primary products) in 1967 represented 89 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 90 percent. Secondary products shipped by this industry in 1967 consisted mainly of public building furniture ($6.3 million), wood household furniture ($2.4 million).

Industry 2521 shipments of wood office furniture (primary products) in 1967 represented 86 percent (coverage ratio) of these products valued at $158.1 million shipped by all industries. In 1963, the coverage ratio was 87 percent. Other industries shipping wood

office furniture (primary products) consisted mainly of industry 2512, Upholstered Household Furniture ($5-$10) million; industry 2522, Metal Office Furniture, $3.2 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2521, these establishments accounted for approximately 1.7 percent of payroll and 1.8 percent of value added by manufacture.

2522--METAL OFFICE FURNITURE

This industry comprises establishments primarily engaged in manufacturing metal office furniture, whether padded or plain. Establishments primarily engaged in manufacturing safes and vaults are classified in industry 3492. For a detailed list of products of industry 2522, refer to table 6A, product codes 2522111 to 2522498.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Metal Office Furniture Industry in 1967 totaled $622.9 million. This included shipments of metal office furniture (primary products), valued at $517.6 million, shipments of other products (secondary products) valued at $65.8 million, and miscellaneous receipts (sales of products bought and resold without further manufacture) of $39.6 million.

This industry's shipments of metal office furniture (primary products) in 1967 represented 89 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 87 percent. Secondary products shipped by this industry in 1967 consisted mainly of metal partitions and fixtures ($16.4 million), and safes and vaults ($8.3 million).

Industry 2522 shipments of metal office furniture (primary products) in 1967 represented 88 percent (coverage ratio) of these products valued at $586.1 million shipped by all industries. In 1963, the coverage ratio was 89 percent. Other industries shipping metal office furniture (primary products) consisted mainly of industry 2542, Metal Partitions and Fixtures, $11.5 million; industry 3492, Safes and Vaults, ($10-$20) million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2522, these establishments accounted for approximately .2 percent of payroll and .2 percent of value added by manufacture.

2531--PUBLIC BUILDING AND RELATED FURNITURE

This industry comprises establishments primarily engaged in manufacturing furniture for schools, theaters, assembly halls, churches and libraries. Establishments primarily engaged in manufacturing seats for public conveyances, as well as seats for automobiles and aircraft, are included in this industry. Establishments primarily engaged in manufacturing stone furniture are classified in industry 3281; and concrete furniture in industry 3272. For a detailed list of products of industry 2531, refer to table 6A, product codes 2531112 to 2531298.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Public Building Furniture Industry in 1967 totaled $421.2 million. This included shipments of public building furniture (primary

products), valued at $333.2 million, shipments of other products (secondary products) valued at $65.8 million, and miscellaneous receipts (sales of products bought and resold without further manufacture) of $22.2 million.

This industry's shipments of public building furniture (primary products) in 1967 represented 84 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 88 percent. Secondary products shipped by this industry in 1967 consisted mainly of wood partitions and fixtures ($11.1 million), furniture and fixtures, n.e.c. ($5.1 million).

Industry 2531 shipments of public building furniture (primary products) in 1967 represented 86 percent (coverage ratio) of these products valued at $389.7 million shipped by all industries. In 1963, the coverage ratio was 85 percent. Other industries shipping public building furniture (primary products) consisted mainly of industry 2522, Metal Office Furniture, $6.5 million; industry 2521, Wood Office Furniture, $6.3 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2531, these establishments accounted for approximately 1.4 percent of payroll and 1.5 percent of value added by manufacture.

2541--WOOD PARTITIONS, SHELVING, LOCKERS, AND OFFICE AND STORE FIXTURES

This industry comprises establishments primarily engaged in manufacturing wood shelving, lockers, office and store fixtures, prefabricated partitions, and related fabricated products. Establishments primarily engaged in manufacturing refrigerated cabinets, showcases, and display cases are classified in industry 3585, and safes and vaults in industry 3492. For a detailed list of products of industry 2541, refer to table 6A, product codes 2541011 to 2541098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Wood Partitions and Fixtures Industry in 1967 totaled $498.6 million. This included shipments of wood partitions and fixtures (primary products), valued at $433.2 million, shipments of other products (secondary products) valued at $31.6 million, and miscellaneous receipts (mainly sales of products bought and resold without further manufacture) of $33.8 million.

This industry's shipments of wood partitions and fixtures (primary products) in 1967 represented 93 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 94 percent. Secondary products shipped by this industry in 1967 consisted mainly of metal partitions and fixtures ($9.2 million), public building furniture ($4.9 million).

Industry 2541 shipments of wood partitions and fixtures (primary products) in 1967 represented 89 percent (coverage ratio) of these products valued at $484.5 million shipped by all industries. In 1963, the coverage ratio was 89 percent. Other industries shipping wood partitions and fixtures (primary products) consisted mainly of industry 2542, Metal Partitions and Fixtures, $12.1 million; industry 2531, Public Building Furniture, $11.1 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other

Government agencies and the remaining statistics estimated from industry averages. For industry 2541, these establishments accounted for approximately 4.9 percent of payroll and 6.1 percent of value added by manufacture.

2542--METAL PARTITIONS, SHELVING, LOCKERS AND OFFICE AND STORE FIXTURES

This industry comprises establishments primarily engaged in manufacturing metal shelving, lockers, office and store fixtures, prefabricated partitions, and related fabricated products. Establishments primarily engaged in manufacturing refrigerated cabinets, showcases, and display cases are classified in industry 3585, and safes and vaults in industry 3492. For a detailed list of products of industry 2542, refer to table 6A, product codes 2542013 to 2542098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Metal Partitions and Fixtures Industry in 1967 totaled $512 million. This included shipments of metal partitions and fixtures (primary products), valued at $428.8 million, shipments of other products (secondary products) valued at $50.1 million, and miscellaneous receipts (mainly contract work on materials owned by others) of $33.1 million.

This industry's shipments of metal partitions and fixtures (primary products) in 1967 represented 90 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 83 percent. Secondary products shipped by this industry in 1967 consisted mainly of wood partitions and fixtures ($12.1 million), metal office furniture ($11.5 million).

Industry 2542 shipments of metal partitions and fixtures (primary products) in 1967 represented 84 percent (coverage ratio) of these products valued at $512.2 million shipped by all industries. In 1963, the coverage ratio was 82 percent. Other industries shipping metal partitions and fixtures (primary products) consisted mainly of industry 2522, Metal Office Furniture, $16.4 million; industry 2541, Wood Partitions and Fixtures, $9.2 million.

As indicated in the introduction, small establishments generally with less then 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2542, these establishments accounted for approximately 1.7 percent of payroll and 1.8 percent of value added by manufacture.

2591--VENETIAN BLINDS AND SHADES

This industry comprises establishments primarily engaged in manufacturing venetian blinds, regardless of the materials used, and shades except canvas shades and awnings (industry 2394). For a detailed list of products of industry 2591, refer to table 6A, product codes 2591112 to 2591298.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Venetian Blind and Shades Industry in 1967 totaled $246.8 million. This included shipments of venetian blinds and shades (primary products), valued at $195.2 million, shipments of other products (secondary products)

valued at $23.2 million, and miscellaneous receipts (mainly sales of products bought and resold without further manufacture) of $28.4 million.

This industry's shipments of venetian blinds and shades (primary products) in 1967 represented 89 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 89 percent. Secondary products shipped by this industry in 1967 consisted mainly of sheet metalwork (($5-$10) million), miscellaneous plastics products ($3.2 million).

Industry 2591 shipments of venetian blinds and shades (primary products) in 1967 represented 94 percent (coverage ratio) of these products valued at $207.0 million shipped by all industries. In 1963, the coverage ratio was 90 percent. Other industries shipping venetian blinds and shades (primary products) consisted mainly of industry 2295, Coated Fabrics, Not Rubberized, (over $2 million).

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2591, these establishments accounted for approximately 6.9 percent of payroll and 8.0 percent of value added by manufacture.

2599--FURNITURE AND FIXTURES, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing furniture and fixtures, not elsewhere classified, including furniture especially designed for use in restaurants. For a detailed list of products of industry 2599, refer to table 6A, product codes 2599021 to 2599098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Furniture and Fixtures, N.E.C., Industry in 1967 totaled $179.0 million. This included shipments of furniture and fixtures, n.e.c. (primary products), valued at $144.5 million, shipments of other products (secondary products) valued at $22.5 million, and miscellaneous receipts (mainly sales of products bought and resold without further manufacture) of $11.9 million.

This industry's shipments of furniture and fixtures, n.e.c. (primary products) in 1967 represented 87 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 86 percent. Secondary products shipped by this industry in 1967 consisted mainly of wood partitions and fixtures ($3.8 million), miscellaneous machinery, except electrical ($2.8 million).

Industry 2599 shipments of furniture and fixtures n.e.c. (primary products) in 1967 represented 75 percent (coverage ratio) of these products valued at $193.8 million shipped by all industries. In 1963, the coverage ratio was 70 percent. Other industries shipping furniture and fixtures, n.e.c. (primary products) consisted mainly of industry 2515, Mattresses and Bedsprings, ($5-$10) million; industry 2514, Metal Household Furniture, $5.2 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2599, these establishments accounted for approximately 2.0 percent of payroll and 2.9 percent of value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	End-of-year inventories	Specialization ratio	Coverage ratio

Note: In 1967, 1963, and 1958, the number of companies in industry 2521, was 172, 131, and 147, respectively; in industry 2522: 166, 153, and 122; industry 2531: 428, 424, and 384; industry 2541: 1,463, (NA), and (NA); industry 2542: 491, (NA), and (NA); industry 2591: 581, 695, and 822; industry 2599: 317, 354, and 258. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: (NA) Not available. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.

*These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: ~ Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250 to 499 employees
CC - 500 to 999 employees
EE - 1,000 to 2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard note: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e]Over 30 percent of the data for this line was estimated.

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

[2]Includes an unspecified amount for plants under construction but not in operation.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Ind. code	Industry and census year	Value of shipments: Total (million dollars) A	Primary products (million dollars) B	Secondary products (million dollars) C	Miscellaneous receipts (million dollars) D	Primary product specialization ratio Col. B / Col. B+C (percent) E	Value of primary product shipments: Total, made in all industries (million dollars) F	Made in this industry (million dollars) G	Made in other industries (million dollars) H	Coverage ratio Col. B / Col. F (percent) I

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Product class code	Class of products and miscellaneous receipts	All industries	Wood office furniture (SIC 2521)	Metal office furniture (SIC 2522)	Public building furniture (SIC 2531)	Wood partitions and fixtures (SIC 2541)	Metal partitions and fixtures (SIC 2542)	Venetian blinds and shades (SIC 2591)	Furniture and fixtures n.e.c. (SIC 2599)	Other industries

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967—Continued

Product class code		Class of products and miscellaneous receipts	Other industries
		Listing of the other industries with over $2 million shipments of the primary products	
2521-	2511	Wood household furniture	2.6
2521-	2512	Upholstered household furniture	(5-10)
2522-	1999	Ordnance and accessories, n.e.c	(over 2)
2522-	2514	Metal household furniture	2.1
2522-	2645	Die-cut paper and board	(over 2)
2522-	3452	Bolts, nuts, rivets, and washers	(over 2)
2522-	3492	Safes and vaults	(10-20)
2522-	3729	Aircraft equipment, n.e.c	(over 2)
2522-	3811	Engineering and scientific instruments	(5-10)
2531-	1929	Ammunition, except for small arms, n.e.c	(over 2)
2531-	2511	Wood household furniture	2.8
2531-	2514	Metal household furniture	3.5
2531-	3317	Steel pipe and tubes	(over 2)
2541-	2431	Millwork	4.2
2541-	2511	Wood household furniture	7.5
2541-	2512	Upholstered household furniture	(over 2)
		Listing of the other industries with over $2 million shipments of the primary products--Continued	
2542-	2515	Mattresses and bedsprings	(over 2)
2542-	3444	Sheet metalwork	4.4
2542-	3452	Bolts, nuts, rivets, and washers	(over 2)
2542-	3461	Metal stampings	(2-5)
2542-	3535	Conveyors and conveying equipment	(over 2)
2542-	3573	Electronic computing equipment	(over 2)
2542-	3585	Refrigeration machinery	6.0
2542-	3589	Service industry machines, n.e.c	(over 2)
2542-	3661	Telephone and telegraph apparatus	(over 2)
2591-	2295	Coated fabrics, not rubberized	(over 2)
2599-	2511	Wood household furniture	2.7
2599-	2514	Metal household furniture	5.2
2599-	2515	Mattresses and bedsprings	(5-10)
2599-	3522	Farm machinery	(over 2)
2599-	3841	Surgical and medical instruments	4.9
2599-	3994	Morticians goods	(over 2)

Note: Data shown parenthetically above are expressed in millions of dollars.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fraction of thousands (rather than rounding) in computer operations. See Appendix, Explanation of terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Unit of measure	Total shipments including interplant transfers			
			1967		1963

25990 02	Furniture and fixtures, n.e.c., n.s.k. (For companies with less than 10 employees. See Note.)	.....	(X)	5.2		

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 census of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases in the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of consistency review. (Z) Under 50 thousand (or under 50 employees). eFrom 10 to 30 percent of this figure was estimated.

[1]Product and product class statistics are published annually during the intracensal years in Current Industrial Reports Series MA 25HH, Manufacturer's Shipments of Office Furniture.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

California	15.3	16.9

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

Note: See Appendix, Explanation of Terms. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computed operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1] These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures whown in parentheses in the value of shipments columns either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data.

[2] Product and product class statistics are published annually during the Intracensal years in current industrial reports, series MA-25H manufacturers' shipments of office furniture.

[3] Combined in 1958, 1954 and 1947 because of classification problems between wood and metal partitions and fixtures.

Note: Detail figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: -Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error on the basis of a consistency review. (Z) Under $50 thousand.

[1]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967, this includes estimates for companies that were not mailed report forms.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization--the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization--the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments	All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Under 50 thousand (or under 50 employees).

Paper and Allied Products

26A Pulp, paper, and board mills

26B Converted paper and paperboard products, except containers and boxes

26C Paperboard containers and boxes

This major group includes the manufacture of pulps primarily from wood, and from rags and other cellulose fibers; the conversion of these pulps into paper or board; and the manufacture of paper and paperboard into converted products such as coated paper, paper bags, paperboard boxes, and envelopes. Certain types of converted paper products are classified in other major groups, such as abrasive paper in industry 3291, Abrasive Products, carbon paper in industry 3955, Carbon Paper and Inked Ribbons, and photosensitized and blueprint paper in industry 3861, Photographic Equipment and Supplies.

While there is some overlap in the shipments of products primary to each of the industries in this group, the specialization for this group of industries collectively is very high. Again in 1967 as in 1963, shipments by mills in this group of industries consisted of 99 percent pulp, paper, and board and only 1 percent of other products (chiefly converted paper and board products and basic chemicals produced as a byproduct of the pulp operations). These establishments also accounted for approximately 100 percent of the pulp, paper, and board produced in all manufacturing industries.

There is a high degree of integration between industry 2631, Paperboard Mills, and the various container converting industries, except industries 2652 and 2655, which rely principally on market purchases of paperboard. In industries 2651, 2653, and 2654, a substantial part of the converted paperboard is manufactured and converted by the same company, either at the same location or at separate locations.

The extent of integration between primary mills and converting plants is less marked in the manufacture of other converted paper and paperboard products. Like the manufacturers of paperboard containers and boxes, these converting industries display relatively high specialization and coverage ratios. However, with the exception of industry 2643, Bags, Except Textile Bags, they are composed largely of "independent" or nonintegrated plants; i.e., plants not associated or affiliated with a primary paper or board mill.

TABLE 1. General Statistics: 1967 and Earlier Years

(See Appendix, Explanation of Terms)

Year and item	Establishments		All employees [1]		Production workers			Value added by manufacture [2]	Cost of materials [3]	Value of shipments [3]	Capital expenditures, new [4]

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.

[1] The figures for 1939 through 1967 include data for employees of manufacturing establishments who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known.

[2] Value of products shipped (including resales of finished products produced by other manufacturing establishments) less cost of materials, supplies, fuel, electric energy and contract work plus the net change in finished products and work-in-process inventories between the beginning and end of the year.

[3] The total value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry classification. For a more complete explanation, see Introduction.

[4] The figures for 1958 to 1967 include expenditures for plants under construction and not yet in operation.

[5] Data prior to 1958 are not directly comparable due to a change in the Standard Industrial Classification. Hard pressed wood fiberboard mills are no longer classified in Industry 2661, but are classified in Industry 2499, Wood Products, N.E.C.

[6] The figures for 1939 to 1967 included, whereas those for earlier years excluded, data for establishments primarily engaged in the manufacture of printed paper patterns and laminated enamel hard pressed insulating wallboards of vegetable fiber. Value added by manufacture in 1939 excluding data for these establishments was $869.9 million. The comparability of 1947 to 1967 figures with those for earlier years is further affected by the inclusion of data for establishments primarily engaged in the manufacture of tags which were formerly classified in the printing and publishing area.

[7] Similar data are shown for the years 1949 to 1953 in the annual survey of manufactures volumes. Data for these establishments are not available for the years 1955 to 1957, 1959 to 1962, 1964 to 1966 or prior to 1949.

[8] These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

[9] The figures for 1937 to 1967 include, whereas those for earlier years exclude, data for establishments primarily engaged in manufactures of fiber products, fiber conduits, and molded pulp products. Value added by manufacture for 1937, excluding data for these establishments, was $852.7 million.

[10] The figures for 1931 to 1967 include, whereas those for earlier years exclude, data for establishments primarily engaged in manufacture of papeteries. Value added by manufacture for 1931, excluding data for these establishments, was $599.6 million.

TABLE 2. General Statistics, by Geographic Areas: 1967 and 1963

(See Appendix, Explanation of Terms)

Code	Industry and geographic area[1]	1967											1963	
		Establishments		All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials[2] (million dollars)	Value of shipments[2] (million dollars)	Capital expenditures, new (million dollars)	All employees (1,000)	Value added by manufacture (million dollars)
		Total (number)	With 20 employees or more (number)	Number (1,000)	Payroll (million dollars)	Number (1,000)	Man-hours (millions)	Wages (million dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]The value of shipments and cost of materials for industry groups (2- and 3-digit) includes extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

TABLE 3. Detailed Statistics: 1967

Item	Paper and allied products (SIC 26)	Pulpmills (SIC 261)	Papermills, except building paper (SIC 262)	Paperboard mills (SIC 263)	Miscellaneous converted paper products (SIC 264)	Paperboard containers and boxes (SIC 265)	Building paper and board mills (SIC 266)

[1]The value of shipments and cost of materials for industry groups (2- and 3-digit) includes extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

PULP, PAPER, AND BOARD MILLS

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2611--Pulpmills
2621--Papermills, Except Building Papermills
2631--Paperboard Mills
2661--Building Paper and Building Board Mills

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

2611--PULPMILLS

This industry comprises establishments primarily engaged in manufacturing pulp from wood or from other materials such as rags, linters, waste paper, and straw. Logging camps operated by pulpmills, and not separately reported, are also included in this industry. Establishments primarily engaged in cutting pulpwood are classified in industry 2411; and pulpmills combined with papermills or paperboard mills, and not separately reported, are classified with the latter in industries 2621 and 2631, respectively. For a detailed list of products of industry 2611, refer to table 6A, product codes 261111 to 2611289.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of Pulpmills in 1967 totaled $730.5 million. This included shipments of pulp (primary products), valued at $642.6 million, shipments of other products (secondary products) valued at $86.0 million, and miscellaneous receipts of $1.9 million.

This industry's shipments of pulp (primary products) in 1967 represented 88 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 88 percent. Secondary products shipped by this industry in 1967 consisted mainly of paper, except building paper ($40.0 million), and paperboard ($31.3 million).

Industry 2611 shipments of pulp (primary products) in 1967 represented 71 percent (coverage ratio) of these products valued at $904.8 million shipped by all industries. In 1963, the coverage ratio was 71 percent. Other industries shipping pulp products (primary

products) consisted mainly of industry 2621, Papermills, Except Building Paper, $142.0 million; industry 2631, Paperboard Mills, $104.7 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2611, these establishments accounted for 0.2 percent of payroll and 0.2 percent of value added by manufacture.

2621--PAPERMILLS, EXCEPT BUILDING PAPERMILLS

This industry comprises establishments primarily engaged in manufacturing paper (except building paper, industry 2661) from woodpulp and other fibers, and which may also manufacture converted paper products. Pulpmills combined with papermills and not separately reported, are also included in this industry; where separately reported, they are classified in industry 2611. Establishments primarily engaged in manufacturing converted paper products from purchased paper stock are classified in groups 264 or 265. For a detailed list of products of industry 2621, refer to table 6A, product codes 2621010 to 2621900.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of Papermills, Except Building Paper, in 1967 totaled $4,844.0 million. This included shipments of papermill products, except building paper (primary products), valued at $4,417.7 million, shipments of other products (secondary products) valued at $377.7 million, and miscellaneous receipts of $48.6 million.

This industry's shipments of papermill products, except building paper (primary products) in 1967 represented 92 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 90 percent. Secondary products shipped by this industry in 1967 consisted mainly of paperboard ($199.3 million), and pulp ($142.0 million).

Industry 2621 shipments of papermill products, except building paper (primary products) in 1967 represented 93 percent (coverage ratio) of these products valued at $4,739.5 million shipped by all industries. In 1963, the coverage ratio was 92 percent. Other industries shipping papermill products, except building paper (primary products) consisted mainly of industry 2631, Paperboard Mills, $262.7 million; industry 2611, Pulpmills, $40.0 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2621, these establishments accounted for 0.01 percent of payroll and 0.01 percent of value added by manufacture.

2631--PAPERBOARD MILLS

This industry comprises establishments primarily engaged in manufacturing paperboard, including paperboard coated on the paperboard machine, from woodpulp and other fibers; and which may also manufacture converted paperboard products. Pulpmills combined with paperboard mills, and not separately reported, are also included in this industry; where separately reported, they are classified in industry 2611. Establishments primarily

engaged in manufacturing converted paperboard products from purchased paperboard are classified in Groups 264 or 265, and building board in industry 2661. For a detailed list of products of industry 2631, refer to table 6A, product codes 2631110 to 2631800.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of Paperboard Mills in 1967 totaled $2,907.0 million. This included shipments of paperboard mill products (primary products), valued at $2,433.5 million, shipments of other products (secondary products) valued at $452.0 million, and miscellaneous receipts of $21.5 million.

This industry's shipments of paperboard (primary products) in 1967 represented 84 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 87 percent. Secondary products shipped by this industry in 1967 consisted mainly of paper, except building paper ($262.7 million), and pulp ($104.7 million).

Industry 2631 shipments of paperboard mills products (primary products) in 1967 represented 91 percent (coverage ratio) of these products valued at $2,673.1 million shipped by all industries. In 1963, the coverage ratio was 90 percent. Other industries shipping paperboard mill products (primary products) consisted mainly of industry 2621, Papermills, Except Building Paper, $199.3 million; industry 2611, Pulpmills, $31.3 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2631, these establishments accounted for 0.02 percent of payroll and 0.01 percent of value added by manufacture.

2661--BUILDING PAPER AND BUILDING BOARD MILLS

This industry comprises establishments primarily engaged in manufacturing building paper and building board from woodpulp and other fibrous materials. Pulpmills combined with building paper and building board mills, and not separately reported, are also included in this industry; where separately reported, they are classified in industry 2611. For a detailed list of products of industry 2661, refer to table 6A, product codes 261110 to 2661200.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of Building Paper and Building Board Mills in 1967 totaled $341.1 million. This included shipments of building paper and board (primary products), valued at $303.6 million, shipments of other products (secondary products) valued at $26.1 million, and miscellaneous receipts (mainly resales) of $11.4 million.

This industry's shipments of building paper and board (primary products) in 1967 represented 92 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 97 percent. Secondary products shipped by this industry in 1967 consisted mainly of wood products, n.e.c. ($18.4 million), and mineral wool ($2-$5 million).

Industry 2661 shipments of building paper and board (primary products) in 1967 represented 96 percent (coverage ratio) of these products valued at $317.9 million shipped by all industries. In 1963, the coverage ratio was 88 percent. Other industries shipping building paper and board (primary products) consisted mainly of industry 2631, Paperboard Mills, $4.9 million; industry 2621, Papermills, Except Building Paper, $2.1 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2661, these establishments accounted for 0.1 percent of payroll and 0.1 percent of value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	End-of-year inventories	Specialization ratio	Coverage ratio

Note: In 1967, 1963, and 1958, the number of companies in industry 2611 was 45, 34, and 40, respectively; in industry 2621: 203, 186, and 242; industry 2631: 148, 146, and 149; industry 2661: 43, 33, and 130. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: -Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (Z) Under 50 thousand (or under 50 employees).

[1]General Statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250 to 499 employees
CC - 500 to 999 employees
EE - 1,000 to 2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1] The proportion of product shipments (both primary and secondary) of the industry represented by primary products.

[2] The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See appendix, Explanation of Terms.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for these items are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [c]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees). - Represents zero.

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

[2]Includes an unspecified amount for plants under construction but not in operation.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Ind. code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. B+C (percent)	Total, made in all industries (million dollars)	Made in this industry (million dollars)	Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)
		A	B	C	D	E	F	G	H	I
2611	Pulpmills	1967.. 730.5	642.6	86.0	1.9	88	904.8	642.6	262.2	71
		1963.. 609.0	539.2	68.6	1.2	88	726.0	539.2	186.7	71
2621	Papermills, except building paper	1967.. 4,844.0	4,417.7	377.7	48.6	92	4,739.5	4,417.7	321.8	93
		1963.. 3,824.9	3,420.4	372.1	32.5	90	3,724.0	3,420.4	303.7	92
2631	Paperboard mills	1967.. 2,907.0	2,433.5	452.0	21.5	84	2,673.1	2,433.5	239.6	91
		1963.. 2,316.0	1,960.3	343.7	12.0	87	2,184.7	1,960.3	224.4	90

Note: See Appendix, Explanation of Terms. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Product code	Class of products, industry and miscellaneous receipts	All industries	Pulpmills (SIC 2611)	Papermills, except building paper (SIC 2621)	Paperboard mills (SIC 2631)	Building paper and board mills (SIC 2661)	Other industries

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Production for all purposes [5] (1,000 short tons)	Total value of shipments, including interplant transfers [2] [3]		Interplant transfers [2] [3]	
			Quantity (1,000 short tons)	Value (million dollars)	Quantity (1,000 short tons)	Value (million dollars)
		1967				
2621- --	PAPERMILL PRODUCTS, EXCEPT BUILDING PAPER, TOTAL	20,937.6	20,708.0	4,739.5	4,374.7	835.0
26211 00	Newsprint	2,547.2	2,538.6	321.8	(D)	(D)
26212 --	Groundwood paper, uncoated	1,163.5	1,123.6	192.6	(D)	(D)
26212 10	Publication and printing	961.8	927.0	151.4	(D)	(D)
26212 30	Body stock for coating	201.7	196.6	41.2	54.6	11.4
26212 50	Other converting and miscellaneous groundwood					
26213 --	Coated printing and converting paper	3,164.4	3,126.3	818.1	38.4	11.2
26213 10	Coated, one side	355.8	337.4	116.2	9.1	3.7
26213 30	Coated, two sides	2,798.5	2,778.9	698.5	(D)	(D)
	Prime-coated body stock for further coating:					
26213 50	Produced for shipment to establishments without papermaking equipment	10.1	10.0	3.4	(D)	(D)
26213 60	Produced for own use or for shipment to establishments with papermaking equipment (memo only, not included in totals)	211.0	(X)	(X)	(X)	(X)
26214 --	Book paper, uncoated	2,287.1	2,230.7	583.4	124.0	29.9
26214 10	Publication and printing	1,381.2	1,367.5	378.0	116.3	28.1
	Body stock for coating:					
26214 30	Produced for shipment to establishments without papermaking equipment	41.5	40.9	10.6	-	-
26214 50	Produced for own use or for shipment to establishments with papermaking equipment (memo only, not included in totals)	195.4	(X)	(X)	(X)	(X)
26214 60	Other converting and miscellaneous book paper	864.4	822.3	194.8	7.7	1.8
26215 --	Bleached bristols (excluding cotton fiber index and bogus)	985.7	957.8	210.6	30.7	7.6
26215 10	Tabulating index	543.0	533.3	102.9	(D)	(D)
26215 30	Tag and file folder	243.0	234.9	49.1	(D)	(D)
26215 50	Other uncoated bristols	150.0	144.1	43.7	(D)	(D)
26215 60	Coated bristols	49.7	45.5	14.9	(D)	(D)
26216 --	Writing and related papers	2,567.6	2,544.3	934.9	175.9	51.1
26216 10	Writing, cotton fiber, including cotton fiber index	159.8	154.9	97.9	(D)	(D)
26216 30	Writing, chemical woodpulp	1,914.5	1,906.3	587.6	151.5	42.5
26216 50	Cover, text	191.9	186.4	79.7	(D)	(D)
26216 70	Thin paper	229.1	226.4	147.1	10.5	4.6
26216 90	Other writing, and related paper	72.3	70.3	22.6	(D)	(D)
26217 --	Unbleached kraft packaging and industrial converting paper	3,563.2	3,526.3	503.1	1,248.6	167.9
26217 10	Wrapping	390.8	384.4	59.6	63.6	9.4
26217 30	Shipping sack	919.2	906.5	133.8	412.5	58.6
26217 50	Bag and sack (other than shipping sack)	1,600.0	1,614.2	204.3	668.9	82.8
26217 60	Other converting (18 pounds and over)	653.2	621.2	105.4	103.6	17.1
26218 --	Packaging and industrial converting paper except unbleached kraft	1,108.1	1,109.2	283.8	274.3	66.2
26218 10	Wrapping	195.7	191.7	41.7	48.7	12.4
26218 30	Shipping sack including combination kraft and rope bleached and semibleached	78.2	75.2	12.9	34.2	7.4
26218 50	Other bag and sack	182.0	183.6	33.7	69.7	12.9
26218 60	Other converting (18 pounds and over)	474.9	479.8	117.1	97.0	22.5
26218 80	Glassine, greaseproof and vegetable parchment	177.3	178.9	78.4	24.7	11.0
26219 00	Special industrial paper	390.7	390.2	193.2	19.1	13.5
26210 --	Tissue paper and other machine creped paper	3,160.1	3,161.0	692.8	2,278.7	459.1
	Sanitary paper:					
26210 10	Toilet tissue	1,120.3	1,115.4	232.8	829.1	161.4
26210 30	Facial tissue, other than toweling napkin, and toilet	360.4	358.1	93.2	268.5	64.8
26210 50	Napkin	333.1	338.6	76.6	198.0	42.5
26210 60	Toweling, excluding wiper stock but including facial tissue stock for towels	978.8	977.4	186.7	815.0	147.3
26210 70	Other sanitary, including sanitary napkin stock, wadding and wiper stock	127.3	125.4	35.4	81.7	21.7
26210 80	Tissue paper, excluding sanitary and thin	240.2	246.1	68.1	86.4	21.4
26210 00	Papermills, except building papermills, n.s.k. (For companies with 10 or more employees. See Note.)	(X)	(X)	4.6	(X)	(X)
26210 02	Papermills, except building papermills, n.s.k. (For companies with less than 10 employees. See Note.)	(X)	(X)	0.6	(X)	(X)

See footnotes at end of table.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards either on the basis of the associated standard error of estimate or on the basis of a consistency review. (Z) Less than 0.1 when rounded.

[1] Source of 1967 Woodpulp "production for all purposes"–1967 Annual Pulp, Paper, and Board Report. Series: M26A(67)-13.

[2] The difference between total shipments and interplant transfers represents "market shipments."

[3] In the case of woodpulp, total shipments and interplant transfers exclude transfers of woodpulp to a papermill operated at the same physical location. In the case of paper and board, total shipments and interplant transfers include transfers of paper and board to a converting facility conducted at the same physical location.

[4] Sulfite and sulfate woodpulp for chemical conversion, paper making, and other uses. For pulp of similar characteristics made from cotton and cotton linters, see product code 26112 81.

[5] The production total shown for paper and board does not include any tonnage for the value of shipments reported in product codes: 26210 00, 26210 02; 26310 00, 26310 02; 26610 00, 26610 02.

[6] In 1963 the criteria was 26 lbs. or less per cu. ft.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

California	9.8	10.9

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

TABLE 6C. Product Classes–Quantity and Value Shipped by All Manufacturing Establishments: 1947, 1954, 1958, 1963 to 1967

TABLE 6C. Product Classes–Quantity and Value Shipped by All Manufacturing Establishments: 1947, 1954, 1958, 1963 to 1967–Continued

Code	Product class	1967	1966[1]	1965[1]	1964[1]	1963	1958	1954	1947
2631-	Paperboard mill products--continued								
26314	Combination paperboard: shipping containerboard.								
	Quantity.....1,000 short tons..	1,760.4	(NA)	(NA)	(NA)	(NA)	(NA)	(NA)	(NA)
	Value.....million dollars..	175.6	(NA)	(NA)	(NA)	(NA)	(NA)	(NA)	(NA)
26315	Combination paperboard: bending:								
	Quantity.....1,000 short tons..	2,920.5	(NA)	(NA)	(NA)	(NA)	(NA)	(NA)	(NA)
	Value.....million dollars..	369.7	(NA)	(NA)	(NA)	(NA)	(NA)	(NA)	(NA)
26316	Combination paperboard: nonbending.								
	Quantity.....1,000 short tons..	1,079.9	(NA)	(NA)	(NA)	(NA)	(NA)	(NA)	(NA)
	Value.....million dollars..	119.2	(NA)	(NA)	(NA)	(NA)	(NA)	(NA)	(NA)
26317	Special conbination packaging and industrial converting paperboard:								
	Quantity.....1,000 short tons..	1,592.0	(NA)	(NA)	(NA)	(NA)	(NA)	(NA)	(NA)
	Value.....million dollars..	145.9	(NA)	(NA)	(NA)	(NA)	(NA)	(NA)	(NA)
26318	Wet machine board:								
	Quantity.....1,000 short tons..	152.7	(NA)	(NA)	(NA)	138.6	133.4	(NA)	(NA)
	Value.....million dollars..	36.4	39.7	36.9	36.1	37.3	28.9	37.4	21.6
26310	Paperboard mill products, n.s.k.:								
	Quantity.....1,000 short tons..	(X)	(X)	(X)	(X)	(X)	(X)	(X)	(X)
	Value.....million dollars..	34.0	0.7	1.1	1.2	1.5	(X)	(X)	(X)
2661-	Building paper and board:[3]								
	Quantity.....1,000 short tons..	2,757.7	(NA)	(NA)	(NA)	2,595.8	(NA)	(NA)	(NA)
	Value.....million dollars..	317.9	320.0	325.1	316.8	299.5	295.3	256.8	193.2
26611	Insulating board:								
	Quantity.....1,000 short tons..	1,302.4	(NA)	(NA)	(NA)	1,160.1	(NA)	(NA)	(NA)
	Value.....million dollars..	177.3	185.4	190.2	181.8	171.3	169.8	135.6	80.0
26612	Construction paper:								
	Quantity.....1,000 short tons..	1,455.3	(NA)	(NA)	(NA)	1,435.6	(NA)	(NA)	(NA)
	Value.....million dollars..	135.3	133.2	133.7	133.4	126.7	121.1	121.1	113.1
26610	Building paper and board, n.s.k.:								
	Quantity.....1,000 short tons..	(NA)	(NA)	(NA)	(NA)	(NA)	(NA)	(NA)	(NA)
	Value.....million dollars..	5.3	1.4	1.3	1.5	1.5	4.3	(X)	(X)

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes.

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses in the value of shipments columun either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.

[2]Due to a change in 1967 in the detailed grades of paper and paperboard collected, many of the product classes will not have comparable data for prior years.

[3]Due to a classification change in 1963, hard pressed fiberboard is no longer classified in this industry but is included with 2499, Wood Products, N.E.C. Therefore, data shown for earlier years is not comparable.

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963

(See Appendix, Explanation of Terms)

Code	Material	Unit of measure	1967		1963	
			Quantity	Delivered cost (million dollars)	Quantity	Delivered cost (million dollars)

121005	Coal (anthracite, bituminous, and lignite):					
	Quantity	1,000 short tons	(D)	7,458.0	4,879.6	375.0
	Cost	Million dollars	(D)	605	38.0	3.0
331212 331213	Coke, screenings, and breeze:					
	Quantity	1,000 short tons	-	(D)	-	-
	Cost	Million dollars	-	(D)	-	-
	Fuel oil, total:					
	Quantity	1,000 barrels	(D)	16,620.3	16,691.4	791.2
	Cost	Million dollars	(D)	39.1	37.2	2.0
291141	Distillate:					
	Quantity	1,000 barrels	(D)	3,464.0	5,139.6	84.6
	Cost	Million dollars	(D)	8.4	12.0	0.4
291151	Residual:					
	Quantity	1,000 barrels	4,427.6	13,156.3	11,551.8	706.6
	Cost	Million dollars	9.7	30.7	25.2	1.6
131300 331217 331218 291104	Gas (natural, manufactured mixed, blast-furnace, coke-oven, and other gas):					
	Quantity	Million cu. ft	28,475.6	132,305.5	144,469.7	15,270.4
	Cost	Million dollars	10.0	40.0	40.4	5.1
291111 960011	Other fuels (gasoline, LPG, wood, etc.)	...do	3.1	7.1	8.2	1.3
	Fuels, n.s.k.	...do	21	(D)	9.6	0.7
	Purchased electric energy:					
	Quantity	Million kw.-hrs.	1,859.6	12,776.9	5,294.3	1,357.2
	Cost	Million dollars	10.0	92.4	38.9	11.3
	Quantity of electric energy generated less quantity sold	Million kw.-hrs.	1,605.5	11,770.1	9,507.8	75.0
	Total energy used for heat and power[1]	Million kw.-hrs. equivalent	22,336.7	148,941.6	125,938.3	11,101.0

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. In some cases figures which are otherwise publishable are withheld to avoid indirect disclosure by subtraction from higher-level totals or from related figures.

[1]Represents the quantity of purchased electric energy and the kilowatt hours equivalent of all fuels used for heat and power.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)
			Number (1,000)	Payroll (million dollars)	Number (1,000)	Man-hours (millions)	Wages (million dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Under 50 thousand (or under 50 employees).

CONVERTED PAPER AND PAPERBOARD PRODUCTS, EXCEPT CONTAINERS AND BOXES

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2641--Paper Coating and Glazing
2642--Envelopes
2643--Bags, Except Textile Bags
2644--Wallpaper
2645--Die-Cut Paper and Paperboard and Cardboard
2646--Pressed and Molded Pulp Goods
2647--Sanitary Paper Products
2649--Converted Paper and Paperboard Products, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

2641--PAPER COATING AND GLAZING

This industry comprises establishments primarily engaged in manufacturing coated, glazed, or varnished paper from purchased paper. Establishments primarily engaged in manufacturing carbon paper are classified in industry 3955; and photographic and blueprint paper in industry 3861. For a detailed list of products of industry 2641, refer to table 6A, product codes 2641113 to 2641698.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Paper Coating and Glazing Industry in 1967 totaled $1,566.5 million. This included shipments of coated and glazed paper (primary products), valued at $1,183.8 million, shipments of other products (secondary products) valued at $318.7 million, and miscellaneous receipts (mainly resales) of $64.0 million.

This industry's shipments of coated and glazed paper (primary products) in 1967 represented 79 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 82 percent. Secondary products shipped by this industry in 1967 consisted mainly of bags, except textile bags ($53.5 million), and abrasive products ($20-$50 million).

Industry 2641 shipments of coated and glazed paper (primary products) in 1967 represented 87 percent (coverage ratio) of these products valued at $1,354.6 million shipped by all industries. In 1963, the coverage ratio was 78 percent. Other industries shipping coated and glazed paper (primary products) consisted mainly of industry 2643, Bags, Except Textile Bags, $40.6 million; industry 2751, Commercial Printing, Except Lithographic, $20.8 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2641, these establishments accounted for 0.3 percent of payroll and 0.3 percent of value added by manufacture.

2642--ENVELOPES

This industry comprises establishments primarily engaged in manufacturing envelopes of any description from purchased paper and paperboard. Establishments primarily engaged in manufacturing papeteries (boxed stationery) are classified in industry 2649.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Envelopes Industry in 1967 totaled $470.3 million. This included shipments of envelopes (primary products), valued at $425.1 million, shipments of other products (secondary products) valued at $20.2 million, and miscellaneous receipts (mainly resales) of $25.0 million.

This industry's shipments of envelopes (primary products) in 1967 represented 95 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 94 percent. Secondary products shipped by this industry in 1967 consisted mainly of converted paper products, n.e.c. ($10.9 million), and bags, except textile bags (over $2 million).

Industry 2642 shipments of envelopes (primary products) in 1967 represented 96 percent (coverage ratio) of these products valued at $443.4 million shipped by all industries. In 1963, the coverage ratio was 96 percent. Other industries shipping envelopes (primary products) consisted mainly of industry 2649, Converted Paper Products, N.E.C., $11.2 million; industry 2645, Die-cut Paper and Board, $1.2 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2642, these establishments accounted for 0.2 percent of payroll and 0.3 percent of value added by manufacture.

2643--BAGS, EXCEPT TEXTILE BAGS

This industry comprises establishments primarily engaged in manufacturing bags from purchased paper, cellophane, acetate, polyethylene, pliofilm, foil, and similar sheet or film materials. For a detailed list of products of industry 2643, refer to table 6A, product codes 2643111 to 2643351.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Bags, Except Textile Bags, Industry in 1967 totaled $1,375.6 million. This included shipments of bags, except textile bags (primary products), valued at $1,131.2 million, shipments of other products (secondary products) valued at $186.5 million, and miscellaneous receipts (mainly resales) of $57.9 million.

This industry's shipments of bags, except textile bags (primary products) in 1967 represented 86 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 86 percent. Secondary products shipped by this industry in 1967 consisted mainly of coated and glazed paper ($40.6 million), and commercial printing, except lithographic ($39.4 million).

Industry 2643 shipments of bags, except textile bags (primary products) in 1967 represented 88 percent (coverage ratio) of these products valued at $1,292.7 million shipped by all industries. In 1963, the coverage ratio was 88 percent. Other industries shipping Bags, Except Textile Bags (primary products) consisted mainly of industry 2641, Paper Coating and Glazing, $53.5 million; industry 2647, Sanitary Paper Products, $27.2 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2643, these establishments accounted for 0.9 percent of payroll and 1.1 percent of value added by manufacture.

2644--WALLPAPER

This industry comprises establishments primarily engaged in designing, printing and embossing paper for interior walls and ceilings. The paper stock used by this industry is called "hanging paper" and is produced by papermills classified in industry 2621. Does not include contractors who laminate combinations of sheets of vinyl, paper or cloth but do not take title to the product. For a detailed list of products of industry 2644, refer to table 6A, product codes 2644011 to 2644055.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Wallpaper Industry in 1967 totaled $48.6 million. This included shipments of wallpaper (primary products), valued at $46.1 million, shipments of other products (secondary products) and miscellaneous receipts (mainly resales) of $2.5 million.

This industry's shipments of wallpaper (primary products) in 1967 represented a minimum of 95 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 97 percent. Secondary products shipped by this industry in 1967 consisted mainly of coated and glazed paper.

Industry 2644 shipments of wallpaper (primary products) in 1967 represented 99 percent (coverage ratio) of these products valued at $46.2 million shipped by all industries. In 1963, the coverage ratio was 99 percent. Other industries shipping wallpaper (primary products) consisted mainly of industry 2641, Paper Coating and Glazing.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2644, these establishments accounted for 2.7 percent of payroll and 3.7 percent of value added by manufacture.

2645--DIE-CUT PAPER AND PAPERBOARD AND CARDBOARD

This industry comprises establishments primarily engaged in die-cutting purchased paper and paperboard; and in manufacturing cardboard by laminating lining, or surface coating paperboard. Establishments primarily engaged in laminating building paper or building board from purchased paper or board are classified in industry 2649. For a detailed list of products of industry 2645, refer to table 6A, product codes 2645111 to 2645211.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Die-Cut Paper and Board Industry in 1967 totaled $577.5 million. This included shipments of die-cut paper and board (primary products), valued at $470.8 million, shipments of other products (secondary products) valued at $75.8 million, and miscellaneous receipts (mainly resales) of $30.9 million.

This industry's shipments of die-cut paper and board (primary products) in 1967 represented 86 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 88 percent. Secondary products shipped by this industry in 1967 consisted mainly of manifold business forms and photographic equipment and supplies.

Industry 2645 shipments of die-cut paper and board (primary products) in 1967 represented 86 percent (coverage ratio) of these products valued at $547.6 million shipped by all industries. In 1963, the coverage ratio was 82 percent. Other industries shipping die-cut paper and board (primary products) consisted mainly of industry 2631, Paperboard Mills, $21.9 million; industry 2761, Manifold Business Forms, $8.8 million.

As indicated in the introduction, small establishments generally with less then 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2645, these establishments accounted for 1.3 percent of payroll and 1.3 percent of value added by manufacture.

2646--PRESSED AND MOLDED PULP GOODS

This industry comprises establishments primarily engaged in manufacturing all kinds of pressed and molded pulp goods, including papier-mache articles other than statuary and art goods (industry 3299). Establishments primarily engaged in manufacturing plates and utensils from paper are classified in industry 2654. For a detailed list of products of industry 2646, refer to table 6A, product codes 2646108 to 2646298.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Pressed and Molded Pulp Goods Industry in 1967 totaled $145.9 million.

This industry's shipments of pressed and molded pulp goods (primary products) in 1967 represented a minimum of 95 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 99 percent. Secondary products shipped by this industry in 1967 consisted mainly of miscellaneous plastics products.

Industry 2646 shipments of pressed and molded pulp goods (primary products) in 1967 represented a minimum of 95 percent (coverage ratio) of these products valued at $142.7 million shipped by all industries. In 1963, the coverage ratio was 96 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2646, these establishments accounted for 0.0 percent of payroll and 0.1 percent of value added by manufacture.

2647--SANITARY PAPER PRODUCTS

This industry comprises establishments primarily engaged in manufacturing from purchased paper, sanitary paper products, such as facial tissues and handkerchiefs, table napkins, toilet paper, towels, sanitary napkins, and tampons. For a detailed list of products of industry 2647, refer to table 6A, product codes 2647111 to 2647298.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Sanitary Paper Products Industry in 1967 totaled $1,293.4 million. This included shipments of sanitary paper products (primary products), valued at $1,184.3 million, shipments of other products (secondary products) valued at $77.2 million, and miscellaneous receipts (mainly resales) of $31.9 million.

This industry's shipments of sanitary paper products (primary products) in 1967 represented 94 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 93 percent. Secondary products shipped by this industry in 1967 consisted mainly of bags, except textile bags ($27.2 million), and converted paper products, n.e.c. ($20.1 million).

Industry 2647 shipments of sanitary paper products (primary products) in 1967 represented 96 percent (coverage ratio) of these products valued at $1,234.4 million shipped by all industries. In 1963, the coverage ratio was 97 percent. Other industries shipping sanitary paper products (primary products) consisted mainly of industry 2643, Bags, Except Textile Bags; industry 2299, Textile Goods, N.E.C.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2647, these establishments accounted for 0.13 percent of payroll and 0.07 percent of value added by manufacture.

2649--CONVERTED PAPER AND PAPERBOARD PRODUCTS, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing from purchased paper or paperboard miscellaneous converted paper or paperboard products, not elsewhere classified. Establishments primarily engaged in manufacturing sanitary products from purchased paper are classified in industry 2647. For a detailed list of products of industry 2649, refer to table 6A, product codes 2649111 to 2649598.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Converted Paper Products, N.E.C., Industry in 1967 totaled $732.2 million. This included shipments of converted paper products, n.e.c.

(primary products), valued at $553.6 million, shipments of other products (secondary products) valued at $108.0 million, and miscellaneous receipts (mainly resales)of $70.6 million.

This industry's shipments of converted paper products, n.e.c. (primary products) in 1967 represented 84 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 84 percent. Secondary products shipped by this industry in 1967 consisted mainly of blankbooks and looseleaf binders ($16.9 million), and commercial printing, except lithographic ($10-$20 million).

Industry 2649 shipments of converted paper products, n.e.c. (primary products) in 1967 represented 79 percent (coverage ratio) of these products valued at $703.5 million shipped by all industries. In 1963, the coverage ratio was 78 percent. Other industries shipping converted paper products, n.e.c. (primary products) consisted mainly of industry 2771, Greeting Card Publishing, $31.4 million; industry 2782, Blankbooks and Looseleaf Binders, $22.4 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2649, these establishments accounted for 1.8 percent of payroll and 1.9 percent of value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	End-of-year inventories	Specialization ratio	Coverage ratio
	Total (number)	With 20 employees or more (number)	Number (1,000)	Payroll (million dollars)	Number (1,000)	Man-hours (millions)	Wages (million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(percent)	(percent)

Note: In 1967, 1963, and 1958, the number of companies in industry 2641 was 334, 323, and 291, respectively; in industry 2642: 172, 180, and 172; industry 2643: 466, 495, and 379; industry 2644: 74, 77, and 70; industry 2645: 368, 370, and 343; industry 2646: 43, 43, and 46; industry 2647: 91, 97, and (NA); industry 2649: 566, 570, and (NA). The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. * These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

[3]This is a minimum percentage. The exact percentage cannot be shown without disclosing figures for individual companies.

TABLE 1B. Selected Operating Ratios: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

TABLE 2. General Statistics, by Geographic Areas: 1967 and 1963–Continued

Footnotes for table 2 - 26B

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250 to 499 employees
CC - 500 to 999 employees
EE - 1,000 to 1,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

TABLE 3. Detailed Statistics: 1967

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms, for discussions of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Under 50 thousand (or under 50 employees).

[1]The proportion of product shipments (both primary and secondary) of the industry represented by primary products.

[2]The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

[3]This is a minimum percentage. The exact percentage cannot be shown without disclosing figures for individual companies.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e]Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees.)

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Ind. code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. B+C (percent)	Total, made in all industries (million dollars)	Made in this industry (million dollars)	Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)

Note: See Appendix, Explanation of Terms. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]This is a minimum percentage. The exact percentage cannot be shown without disclosing figures for individual companies.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

26495 82	Tags, unprinted	(NA)	13.0	(NA)	9.0
26495 87	Folders and mounts, all types, except file folders	e16.9	10.0	(NA)	5.4
26495 98	Other miscellaneous paper and board products, including labels, unprinted, except gummed, cigarette paper, books, paper draperies, shelf paper, printed and unprinted, etc	(NA)	50.1	(NA)	50.2
26495 00	Other converted paper and board products, n.s.k.	(X)	(D)	(X)	5.4
26490 00	Converted paper and paperboard products, n.s.k. (For companies with 10 or more employees. See Note.)	(X)	40.9	(X)	29.1
26490 02	Converted paper and paperboard products, n.s.k. (For companies with less than 10 employees. See Note.)	(X)	12.7	(X)	(X)

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 19 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5-digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5-digits) followed by "00," or in some cases in the appropriate product group code (4-digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. e From 10 to 30 percent of this figure was estimated. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. (Z) Under 50 thousand (or under 50 employees).

[1] Data for 1967 and 1963 not directly comparable because 1963 data include some production of paper coated at point of primary paper production, but on off-machine facility.

[2] Does not include shipments by contractors who laminate combinations of sheets of vinyl, paper or cloth but do not take title to the products.

[3] The value shown for these items is not included in the product class or industry totals; they are memo items indicating distribution of value of shipments by end use for product codes 2649282 and 2649291. However, the value of these items does not equal the previously noted product codes since not all respondents reported their sales by end use.

[4] Patterns are now included in industry 2741, Miscellaneous Publishing.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments 1967	Value of shipments 1963

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

TABLE 6C. Product Classes–Quantity and Value Shipped by All Manufacturing Establishments: 1947, 1954, 1958, 1963 to 1967

Code	Product class	1967	1966[1]	1965[1]	1964[1]	1963	1958	1954	1947

26495	Other converted paper and board products:								
	Quantity.....short tons..	(NA)	(NA)	(NA)	(NA)	(NA)	652.4	512.3	(NA)
	Value.....million dollars..	283.8	358.3	322.6	296.8	270.1	226.8	188.9	(NA)
26490	Converted paper products, n.e.c., n.s.k.....do....	53.6	(49.4)	(45.0)	(25.5)	29.1	16.7	(X)	(X)

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes. Detailed figures may not add to totals because of independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms, for discussions of items.

Standard notes: -Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses in the value of shipments columns either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data.

[2]There was a change in industry classification in the 1963 Census of Manufactures for industry 2649, Converted Paper Products, N.E.C. Product classes 26493 and 26494 were classified in industry 2647, Sanitary Paper Products, and became product classes 26471 and 26472. For a fuller explanation of the change in industry definitions, see the text.

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963

282103	Cellulosic plastics, sheet, and rolls, and cellophane	...do.....	6.7	2.4	5.2	2.0
970099	All other materials and components, parts, containers, and supplies consumed	.....	(X)	94.9	(X)	96.7
972000	Materials not specified[1]	.....	(X)	17.0	(X)	(X)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]From 10 to 30 percent of this figure was estimated. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.

[1]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967, this includes estimates for companies that were not mailed report forms.

[2]Includes an insignificant amount of "Own paperboard" in order to avoid disclosing figures for individual companies.

[3]Contains an insignificant amount of "purchased (market) paperboard" combined here to avoid disclosing figures of individual companies.

TABLE 7B. Fuels and Electric Energy Consumed: 1967

(See Appendix, Explanation of Terms)

Code	Item	Unit of measure	Paper-coating and glazing (SIC 2641)
	Cost of purchased fuels and electric energy, total....	Million dollars.	14.2
	Cost of purchased fuels, total.....	....do.....	6.6
121005	Coal (anthracite, bituminous, and lignite):		
	Quantity.....	1,000 short tons	71.6
	Cost.....	Million dollars.	0.7
	Fuel oil, total:		
	Quantity.....	1,000 barrels...	524.2
	Cost.....	Million dollars.	1.7
291141	Distillate:		
	Quantity.....	1,000 barrels...	299.5
	Cost.....	Million dollars.	1.1
291151	Residual:		
	Quantity.....	1,000 barrels...	224.7
	Cost.....	Million dollars.	0.6
131300	Gas (natural, manufactured mixed, blast-furnace, coke-oven, and other gas):		
	Quantity.....	Million cu. ft..	3,948.4
	Cost.....	Million dollars.	2.4
960011 960013	Other fuels (gasoline, LPG, wood, etc.).....	...do.....	0.7
975000 976000	Fuels, n.s.k.....	...do.....	1.1
	Purchased electric energy:		
960012	Quantity.....	Million kw.-hrs.	689.9
	Cost.....	Million dollars.	7.6
	Quantity of electric energy generated less quantity sold.....	Million kw.-hrs.	4.1
	Total energy used for heat and power[1].....	Million kw.-hrs. equivalent	4,265.5

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available.
(D) Withheld to avoid disclosing figures for individual companies.

[1] Represents the quantity of purchased electric energy and the kilowatt hours equivalent of all fuels used for heat and power.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization--the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization--the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees: Number (1,000)	All employees: Payroll (million dollars)	Production workers: Number (1,000)	Production workers: Man-hours (millions)	Production workers: Wages (million dollars)	Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)

	ESTABLISHMENTS WITH 75% OR MORE SPECIALIZATION	117	5.9	35.6	4.6	9.0	23.1	80.9	76.7	156.5	2.3

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Under 50 thousand (or under 50 employees).

PAPERBOARD CONTAINERS AND BOXES

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2651--Folding Paperboard Boxes
2652--Setup Paperboard Boxes
2653--Corrugated and Solid Fiber Boxes
2654--Sanitary Food Containers
2655--Fiber Cans, Tubes, Drums, and Similar Products

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

2651--FOLDING PAPERBOARD BOXES

This industry comprises establishments primarily engaged in manufacturing folding paperboard boxes from purchased paperboard. For a detailed list of products of industry 2651, refer to table 6A product codes 2651014 to 2651098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Folding Paperboard Boxes Industry in 1967 totaled $1,216.2 million. This included shipments of folding paperboard boxes (primary products), valued at $1,005.7 million, shipments of other products (secondary products) valued at $190.4 million, and miscellaneous receipts (mainly resales) of $20.1 million.

This industry's shipments of folding paperboard boxes (primary products) in 1967 represented 84 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 85 percent. Secondary products shipped by this industry in 1967 consisted mainly of sanitary food containers ($89.0 million), and corrugated and solid fiber boxes ($46.0 million).

Industry 2651 shipments of folding paperboard boxes (primary products) in 1967 represented 90 percent (coverage ratio) of these products valued at $1,116.2 million shipped by all industries. In 1963, the coverage ratio was 88 percent. Other industries shipping folding paperboard boxes (primary products) consisted mainly of industry 2654, Sanitary Food Containers, $50.6 million; industry 2653, Corrugated and Solid Fiber Boxes, $22.9 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2651, these small establishments accounted for approximately 0.4 percent of payroll and 0.5 percent of value added by manufacture.

2652--SETUP PAPERBOARD BOXES

This industry comprises establishments primarily engaged in manufacturing setup paperboard boxes from purchased paperboard. For a detailed list of products of industry 2652, refer to table 6A, product codes 2652021 to 2652098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Setup Paperboard Boxes Industry in 1967 totaled $282.4 million. This included shipments of setup paperboard boxes (primary products), valued at $254.4 million, shipments of other products (secondary products) valued at $21.4 million, and miscellaneous receipts (mainly resales) of $6.6 million.

This industry's shipments of setup paperboard boxes (primary products) in 1967 represented 92 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 91 percent. Secondary products shipped by this industry in 1967 consisted mainly of folding paperboard boxes ($7.7 million), and sanitary food containers ($3.6 million).

Industry 2652 shipments of setup paperboard boxes (primary products) in 1967 represented 87 percent (coverage ratio) of these products valued at $291.8 million shipped by all industries. In 1963, the coverage ratio was 87 percent. Other industries shipping setup paperboard boxes (primary products) consisted mainly of industry 2651, Folding Paperboard Boxes, $21.5 million; industry 2653, Corrugated and Solid Fiber Boxes, $4.5 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2652, these small establishments accounted for approximately 1.2 percent of payroll and 1.8 percent of value added by manufacture.

2653--CORRUGATED AND SOLID FIBER BOXES

This industry comprises establishments primarily engaged in manufacturing corrugated and solid fiber boxes and related products from purchased paperboard of fiber stock. Important products of this industry include corrugated and solid fiberboard boxes, pads, partitions, display items, pallets, single face products, and corrugated sheets. For a detailed list of products of industry 2653, refer to table 6A, product codes 2653012 to 2653068.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Corrugated and Solid Fiber Boxes Industry in 1967 totaled $2,959.6 million. This included shipments of corrugated and solid fiber boxes (primary products), valued at $2,838.7 million, shipments of other products (secondary products) valued at $59.9 million, and miscellaneous receipts (mainly resales) of $61.0 million.

This industry's shipments of corrugated and solid fiber boxes (primary products) in 1967 represented 98 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 97 percent. Secondary products shipped by this industry in 1967 consisted mainly of folding paperboard boxes ($22.9 million), and sanitary food containers ($8.3 million).

Industry 2653 shipments of corrugated and solid fiber boxes (primary products) in 1967 represented 98 percent (coverage ratio) of these products valued at $2,893.2 million shipped by all industries. In 1963, the coverage ratio was 96 percent. Other industries shipping corrugated and solid fiber boxes (primary products) consisted mainly of industry 2651, Folding Paperboard Boxes, $46.0 million; industry 2652, Setup Paperboard Boxes, $2.1 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2653, these small establishments accounted for approximately 0.2 percent of payroll and 0.2 percent of value added by manufacture.

2654--SANITARY FOOD CONTAINERS

This industry comprises establishments primarily engaged in manufacturing food containers from special food board. Important products of this industry include fluid milk containers; folding paraffined cartons for butter, margarine, and shortening; ice cream containers; frozen food containers; liquid tight containers; round nested food containers; paper cups for hot or cold drinks; and pails for food and ice cream. For a detailed list of products of industry 2654, refer to table 6A product codes 2654113 to 2654373.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Sanitary Food Containers Industry in 1967 totaled $1,093.9 million. This included shipments of sanitary food containers (primary products), valued at $954.5 million, shipments of other products (secondary products) valued at $79.8 million, and miscellaneous receipts (mainly resales) of $59.6 million.

This industry's shipments of sanitary food containers (primary products) in 1967 represented 92 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 92 percent. Secondary products shipped by this industry in 1967 consisted mainly of folding paperboard boxes ($50.6 million), and die-cut paper and board ($7.5 million).

Industry 2654 shipments of sanitary food containers (primary products) in 1967 represented 86 percent (coverage ratio) of these products valued at $1,105.8 million shipped by all industries. In 1963, the coverage ratio was 92 percent. Other industries shipping sanitary food containers (primary products) consisted mainly of industry 2651, Folding Paperboard Boxes, $89.0 million; industry 2771, Greeting Card Publishing, over $2 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2654, these small establishments accounted for approximately 0.2 percent of payroll and 0.2 percent of value added by manufacture.

2655--FIBER CANS, TUBES, DRUMS, AND SIMILAR PRODUCTS

This industry comprises establishments primarily engaged in manufacturing fiber cans, cones, drums, and similar products with or without metal ends, from purchased materials; and vulcanized fiber boxes. For a detailed list of products of industry 2655, refer to table 6A, product codes 2655151 to 2655298.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Fiber Cans, Drums, and Related Materials Industry in 1967 totaled $385.2 million. This included shipments of fiber cans, drums, and related materials (primary products), valued at $362.2 million, shipments of other products (secondary products) valued at $15.8 million, and miscellaneous receipts (mainly resales) of $7.2 million.

This industry's shipments of fiber cans, drums, and related materials (primary products) in 1967 represented 96 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 95 percent. Secondary products shipped by this industry in 1967 consisted mainly of metal barrels, drums, and pails, and miscellaneous plastic products.

Industry 2655 shipments of fiber cans, drums, and related materials (primary products) in 1967 represented 85 percent (coverage ratio) of these products valued at $425.4 million shipped by all industries. In 1963, the coverage ratio was 80 percent. Other industries shipping fiber cans, drums and related materials (primary products) consisted mainly of industry 3411, Metal Cans, and industry 3079, Miscellaneous Plastics Products.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages.. For industry 2655, these small establishments accounted for approximately 1.0 percent of payroll and 1.0 percent of value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	End-of-year inventories	Specialization ratio	Coverage ratio
	Total (number)	With 20 employees or more (number)	Number (1,000)	Payroll (million dollars)	Number (1,000)	Man-hours (millions)	Wages (million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(percent)	(percent)

Note: In 1967, 1963, and 1958, the number of companies in industry 2651 was 476, 534, and 454, respectively; in industry 2652: 418, 474, and 505; industry 2653: 568, 534, and 547; industry 2654: 144, 98, and 65; industry 2665: 165, 166, and 153.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

[3]The 1963 data are not directly comparable with other years due to an undetermined number of establishments reporting sanitary containers as folding boxes. This caused such establishments to be classified incorrectly to the Folding Box Industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X)Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated.

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e] For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1] Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

[2] Includes an unspecified amount for plants under construction but not in operation.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Ind. code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. B+C (percent)	Total, made in all industries (million dollars)	Made in this industry (million dollars)	Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)
		A	B	C	D	E	F	G	H	I

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [r]Revised.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Product code	Class of products, industry, and miscellaneous receipts	All industries	Folding paperboard boxes (SIC 2651)	Setup paperboard boxes (SIC 2652)	Corrugated and solid fiber boxes (SIC 2653)	Sanitary food containers (SIC 2654)	Fiber cans, drums, and related materials (SIC 2655)	Other industries

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Total shipments including interplant transfers			
		1967		1963	
		Quantity (1,000 short tons)	Value (million dollars)	Quantity (1,000 short tons)	Value (million dollars)
2655- --	FIBER CANS, DRUMS, AND RELATED MATERIAL, TOTAL	(X)	425.4	(X)	302.1
26551 51	Paperboard fiber drums with metal, wood, or paperboard ends	122.1	93.4	99.7	62.0
26552 --	Fiber cans, tubes, and similar fiber products	(X)	322.0	(X)	236.9
26552 23	Cans, all fiber bodies, with metal ends	142.5	113.6	61.1	39.8
26552 24	Cans, bodies with combinations of fiber and other materials, including aluminum foil, with metal ends	76.2	72.4	(NA)	74.3
26552 27	Cans, bodies all fiber and combination constructions with at least one end other than metal	23.1	6.8	16.1	9.2
26552 31	Cores and tubes	427.8	95.3	301.7	67.9
26552 71	Paperboard cones, reels, spools, bobbins, and blocks	47.8	21.3	46.3	17.7
26552 98	All vulcanized fiber products--boxes, cans, tubes, drums, etc	(NA)	9.3	31.5	26.6
26552 00	Fiber cans, tubes, and similar fiber products, n.s.k.	(X)	3.3	(X)	1.4
26550 00	Fiber cans, drums, and related materials, n.s.k. (For companies with 10 or more employees. See Note.)	(X)	7.5	(X)	3.2
26550 02	Fiber cans, drums, and related material, n.s.k. (For companies with less than 10 employees. See Note.)	(X)	2.6		

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figures is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [6] From 10 to 30 percent of this figure was estimated.

[1] Establishments engaged in the manufacture of containers and boxes for their own consumption in the manufacture (e.g., packaging) of other products at the same location were not requested to report the value of such products nor the consumption of paper and paperboard in their manufacture, unless a separate container plant was recognized in the bookkeeping records of the company. The quantity columns show the quantity of paper and paperboard consumed during the year in the manufacture of paperboard containers and boxes.

[2] The not specified by kind figure for 1967 includes corrugated shipping containers not classified by end use. In 1963, the data for corrugated shipping containers not classified by end use is shown on one line and not included in the not specified by kind figures.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments

Washington	AA	(D)
Oregon	BB	(1)
California	23.1	16.0

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

TABLE 6C. Product Classes–Quantity and Value Shipped by All Manufacturing Establishments: 1947, 1954, 1958, 1963 to 1967

Code	Product class	1967	1966[1]	1965[1]	1964[1]	1963	1958	1954	1947

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of terms, for discussion of items.

Standard Notes: -Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. n.s.k. Not specified by kind.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

[2]Data may include for 1963 as well as earlier years an unknown amount of butter, margarine, frozen food containers.

[3]Data prior to 1963 excludes Alaska and Hawaii to avoid disclosing individual company figures.

976000	Materials and supplies, n.s.k.[1]	.....	(X)	7.1	-	-

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: -Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967, this includes estimates for companies that were not mailed report forms.

TABLE 7B. Fuels and Electric Energy Consumed: 1967

(See Appendix, Explanation of Terms)

Code	Item	Unit of measure	Corrugated and solid fiber boxes (SIC 2653)
	Cost of purchased fuels and electric energy, total	Million dollars..	25.6
	Cost of purchased fuels, total	...do.....	12.5
121005	Coal (anthracite, bituminous, and lignite):		
	Quantity	1,000 short tons.	55.5
	Cost	Million dollars..	0.4
	Fuel oil, total:		
	Quantity	1,000 barrels....	1,133.2
	Cost	Million dollars..	3.5
291141	Distillate:		
	Quantity	1,000 barrels....	442.2
	Cost	Million dollars..	1.6
291151	Residual:		
	Quantity	1,000 barrels....	691.0
	Cost	Million dollars..	1.9
131300	Gas (natural, manufactured mixed, blast-furnace, coke-oven, and other gas):		
	Quantity	Million cu. ft...	11,296.3
	Cost	Million dollars..	6.2
	Other fuels (gasoline, LPG, wood, etc.)	...do.....	0.9
975000 976000	Fuels, n.s.k.	...do.....	1.5
	Purchased electric energy:		
960012	Quantity	Million kw.-hrs..	994.4
	Cost	Million dollars..	13.1
	Quantity of electric energy generated less quantity sold	Million kw.-hrs..	24.6
	Total energy used for heat and power[1]	Million kw.-hrs. equivalent.....	8,272.4

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than $50 thousand.

[1]Represents the quantity of purchased electric energy and the kilowatt hours equivalent of all fuels used for heat and power.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments	All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new
			Number	Payroll	Number	Man-hours	Wages				
		(number)	(1,000)	(million dollars)	(1,000)	(millions)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)
2654	SANITARY FOOD CONTAINERS

	ESTABLISHMENTS WITH 75% OR MORE SPECIALIZATION.	148	11.3	65.1	9.5	19.7	49.9	123.1	136.6	260.0	10.2

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

Printing and Publishing

27A Newspapers, periodicals, books, and miscellaneous printing

27B Commercial printing and manifold business forms

27C Greeting cards; bookbinding; printing trade services

This major group includes establishments engaged in printing by one or more of the common processes, such as letterpress, lithography, gravure, or screen; and those establishments which perform services for the printing trade, such as bookbinding, typesetting, engraving, photoengraving, and electrotyping. This major group also includes establishments engaged in publishing newspapers, books, and periodicals, regardless of whether or not they do their own printing. News syndicates are classified in services industries, and textile printing and finishing in Major Group 22.

As in previous censuses, publishing, printing, and allied activities, other than those performed in government-owned and operated establishments, are included as manufacturing activities. As noted in the Introduction, this report does not incorporate any data reported by religious, social, charitable, educational, and other nonprofit organizations whose employees are not covered under the Social Security system.

The term "publisher" is used to designate the person or organization by whom or in whose name newspapers, periodicals, and other publications are listed. In order to provide the fullest possible coverage of the publishing field in the census of manufactures, a separate report was requested from each publishing establishment, whether or not any printing was done at the publishing location. All establishments engaged in publishing one or more newspapers (see text under industry 2711, chapter 27A, for the definition of a "newspaper" used in the census of manufactures) are classified as newspaper publishers, without regard to the ratio of receipts from other activities (e.g., job printing) to their total receipts.

The degree of product specialization for this Major Group taken as a whole, as well as the coverage ratio, is very close to 100 percent. For most 4-digit industries in this group, these ratios are also relatively high; that is, they are generally in the 85 to 95 percent range. However, for the two principal commercial printing industries (industries 2751 and 2752) and the book printing industry (industry 2732), the degree of specialization in primary activity falls in the 75 to 85 percent brackets. These lower specialization ratios reflect the tendency for printers to diversify their operations with respect not only to products or kinds of printing services performed but also to the printing processes employed.

TABLE 1. General Statistics: 1967 and Earlier Years

(See Appendix, Explanation of Terms)

Year and item	Establishments		All employees[1]		Production workers			Value added by manufacture[2]	Cost of materials[3]	Value of shipments[3]	Capital expenditures new[4]
	Total (number)	With 20 employees or more (number)	Total (1,000)	Payroll (million dollars)	Total (1,000)	Man-hours (million dollars)	Wages (million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.

[1] The figures for 1939 through 1967 include data for employees of printing and publishing establishments who were engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known.

[2] Value of products and receipts less cost of materials, supplies, fuel, electricity, and contract work plus the net change in finished products and work-in-process inventories between the beginning and end of the year. For 1909 to 1933, cost of contract work was subtracted from value of products in calculating value added by manfacture only for the industries in which it was significant. For 1899 and 1904, cost of contract work was not subtracted from value of products for any industries. Value added by manufacture for 1909, calculated by the method used for 1899 and 1904, was $555.5 million.

[3] The total value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry classification. For a more complete explanation, see Introduction.

[4] The figures for 1958 to 1967 include expenditures for plants under construction and not yet in operation.

[5] Similar data are shown for the years 1949 to 1953 in the annual survey of manufactures volumes. Data for these establishments are not available for the years 1955 to 1957, 1959 to 1962 or prior to 1949.

[6] These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

[7] The establishments classified in the printing and publishing industries reported inventories for the first time in 1957. Therefore, the adjusted value added figures are not precisely comparable, in that the adjusted value added figure does not include the inventories adjustment.

[8] The figures for 1899 to 1939 include data for establishments primarily engaged in the manfuacture of tags, which are classified in 1947 to 1954 in the pulp, paper and allied products industries.

[9] The figures for 1899 to 1937 include data for establishments primarily engaged in the manufacture of paper patterns, which are included for later years in the series for the pulp, paper and products industries.

[10] Establishments engaged solely in music publishing were not canvassed in 1933.

TABLE 2. General Statistics, by Geographic Areas: 1967 and 1963

(See Appendix, Explanation of Terms)

Code	Industry and geographic area[1]	1967											1963	
		Establishments		All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials[2] (million dollars)	Value of shipments[2] (million dollars)	Capital expenditures, new (million dollars)	All employees (1,000)	Value added by manufacture (million dollars)
		Total (number)	With 20 employees or more (number)	Number (1,000)	Payroll (million dollars)	Number (1,000)	Man-hours (millions)	Wages (million dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]The value of shipments and cost of materials for industry groups (2- and 3-digit) includes extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

[1]The value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation see introduction.

NEWSPAPERS, PERIODICALS, BOOKS, AND MISCELLANEOUS PUBLISHING

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2711--Newspapers: Publishing, Publishing and Printing
2721--Periodicals: Publishing, Publishing and Printing
2731--Books: Publishing, Publishing and Printing
2732--Book Printing
2741--Miscellaneous Publishing

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

As in previous censuses, publishing, printing, and allied activities, other than those performed in Government-owned and operated establishments, are included as manufacturing activities. Establishments engaged in publishing newspapers, and establishments primarily engaged in publishing periodicals, books, and miscellaneous publications (including those primarily engaged in book printing) are assigned to one of the five separately described industries below. As noted in the Introduction, this report does not incorporate any data reported by religious, social, charitable, educational, and other nonprofit organizations whose employees are not covered under the Social Security System. News syndicates are classified in service industries and their activities are included in the census of business.

The term "publisher" is used to designate the person or organization by whom or in whose name newspapers, periodicals, and other publications are listed. In order to provide the fullest possible coverage of the publishing field in the census of manufactures, a separate report was requested from each publishing establishment, whether or not any printing was done at the publishing location. All establishments engaged in the publishing of one or more newspapers are classified as newspaper publishers, without regard to the ratio of receipts from other activities (e.g., job printing) to their total receipts.

Publishers of newspapers and periodicals were asked to report separately for each of their publications, where possible, information on circulation and dollar receipts by frequency of issue as well as by type of revenue. The more common frequencies of issue were listed on the report forms supplied to all newspapers, and a special inquiry was addressed to publishers of periodicals to provide uniform designation of periodicals by type of issue. Newspaper and periodical publishers were required to break their total revenues into two parts--receipts from subscriptions and sales, and receipts from advertising; "total revenue" was defined as net after deducting advertising agency commissions, cash discounts, newsstand, carrier, and wholesalers' commissions, and other similar items.

As in 1963, the data on number of employees for newspaper and periodical publishing do not include newsboys or carrier boys. Again, periodical and book publishers have been subdivided to group separately those who publish only from those who print as well as publish. Newspapers are also subdivided into daily and weekly and other papers. The general operating statistics shown in tables 3, 4 and 8 provide this subindustry treatment for industries 2711, 2721, and 2731.

2711--NEWSPAPERS: PUBLISHING, PUBLISHING AND PRINTING

This industry comprises establishments primarily engaged in publishing and printing newspapers. These establishments carry on the various operations necessary for issuing newspapers, including the gathering of news and the preparation of editorials and advertisments, but may or may not perform their own printing. Commercial printing is frequently carried on by establishments engaged in publishing and printing newspapers, but even though the commercial printing may be of major importance, such establishments are included in this industry. For the purposes of the census of manufactures, the term "newspaper" includes those publications issued at regular frequencies which contain news of interest to the general public whether or not they are published in the English language. Establishments not engaged in publishing newspapers, but which print or lithograph newspapers for publishers, are classified in industry 2751 or industry 2752. News syndicates are classified in service industries (industry 7351.) For a detailed list of products of industry 2711, refer to table 6A, product codes 2711101 to 2711498.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Publications have been classified as periodicals (industry 2721) rather than as newspapers if their news and editorial presentations do not appear to be directed to the public at large. Among the types of publications sometimes considered newspapers, but treated in the census as periodicals, are the following: trade journals; house organs, local church or school papers and like publications with very limited or specialized news treatment. Generally publications issued by nonprofit organizations (educational, religious, charitable, labor, business, professional, etc.) are classified as periodicals, as are magazine and comic supplements for Sunday newspapers.

Receipts of the Newspapers Industry in 1967 totaled $5,757.1 million. This included receipts from newspapers (primary products), valued at $5,549.8 million, receipts from other activities (secondary products) valued at $159.1 million, and miscellaneous receipts of $48.2 million.

This industry's receipts from newspapers (primary products) in 1967 represented 97 percent (specialization ratio) of its total receipts (primary and secondary). The industry specialization ratio in 1963 was 96 percent. Secondary receipts for this industry in 1967 consisted mainly of commercial printing, except lithographic ($99.4 million), and commercial printing, lithographic ($35.0 million).

Industry 2711 receipts from newspapers (primary products) in 1967 represented 100 percent (coverage ratio) of these receipts valued at $5,549.8 million. In 1963, the coverage ratio was also 100 percent.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2711 these establishments accounted for approximately 2.5 percent of payroll and 3.0 percent of value added by manufacture.

2721--PERIODICALS: PUBLISHING, PUBLISHING AND PRINTING

This industry comprises establishments primarily engaged in publishing periodicals, or in preparing, publishing, and printing periodicals. These establishments carry on the various operations necessary for issuing periodicals, but may or may not perform their own printing. Establishments not engaged in publishing periodicals, but which print or lithograph periodicals for publishers are classified in industry 2751 or industry 2752.

Data on the periodical publishing activities of nonprofit organizations (religious, educational, social, charitable, etc.) have been included to the extent that the employees of such organizations were covered under the Social Security Systems. For the distinction between newspapers and periodicals which has been applied in classifying establishments for the census of manufactures, see the foregoing statements under industry 2711, Newspapers. For a detailed list of products of industry 2721, refer to table 6A, product codes 2721112 to 2721737.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Receipts of the Periodicals Industry in 1967 totaled $3,095.9 million. This included receipts from periodicals (primary products), valued at $2,599.5 million, receipts from other activities (secondary products) valued at $335.8 million, and miscellaneous receipts (mainly resales) of $160.6 million.

This industry's receipts from periodicals (primary products) in 1967 represented 89 percent (specialization ratio) of its total receipts (primary and secondary). The industry specialization ratio in 1963 was 91 percent. Secondary receipts for this industry in 1967 consisted mainly of book publishing ($271.8 million), and miscellaneous publishing ($46.2 million).

Industry 2721 receipts from periodicals (primary products) in 1967 represented 97 percent (coverage ratio) of these receipts valued at $2,668.2 million received by all industries. In 1963, the coverage ratio was 96 percent. Other industries with receipts from periodicals (primary products) consisted mainly of industry 2731, Book Publishing, $48.2 million; industry 2711, Newspapers, $6.1 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2721, these establishments accounted for approximately 2.6 percent of payroll and 3.0 percent of value added by manufacture.

2731--BOOKS: PUBLISHING, PUBLISHING AND PRINTING

This industry comprises establishments primarily engaged in publishing and printing books and pamphlets. Establishments primarily engaged in printing or in printing and binding (but not publishing) books and pamphlets are classified in industry 2732, Book Printing.

Industry 2731 also includes data on book publishing activities obtained from nonprofit organizations whose employees are covered under the Social Security System and were able to report their book publishing operations as a separate establishment. For a detailed list of the type of receipts classified as primary to industry 2731, refer to table 6A, product codes 2731111 to 2731645.

The data presented in table 6A for number of books sold represent the total number of books sold (shipped and billed) by publishers during 1967, without regard to whether these books were actually published or printed in 1967. The value figures shown in this table and in tables 6B and 6C are net publishers' receipts after deducting cash discounts, returns and allowances; i.e., they represent net sales.

"Books" are considered to include all collections of 49 or more pages, exclusive of the cover, bound by any method, and all hardboard collections, irrespective of the number of pages. (The designation "hardbound" describes books which are bound with paper over board, cloth over board, and aritificial or genuine leather.) "Pamphlets" are defined to mean any collection to be offered for sale of at least 5 but less than 49 paperbound pages.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Receipts of the Book Publishing Industry in 1967 totaled $1,974.8 million. This included receipts from book publishing (primary products), valued at $1,801.3 million, receipts from other activities (secondary products) valued at $107.9 million, and miscellaneous receipts (mainly resales) of $65.6 million.

This industry's receipts from book publishing (primary products) in 1967 represented 94 percent (specialization ratio) of its total receipts (primary and secondary). The industry specialization ratio in 1963 was 93 percent. Secondary receipts for this industry in 1967 consisted mainly of periodicals ($48.2 million), and book printing ($13.8 million).

Industry 2731 receipts from book publishing (primary products) in 1967 represented 85 percent (coverage ratio) of these receipts valued at $2,112.6 million received by all industries. In 1963, the coverage ratio was 88 percent. Other industries with receipts from book publishing (primary products) consisted mainly of industry 2721, Periodicals, $271.8 million; industry 2741, Miscellaneous Publishing, $13.6 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2731, these establishments accounted for approximately 1.4 percent of payroll and 1.6 percent of value added by manufacture.

2732--BOOK PRINTING

This industry comprises establishments primarily engaged in printing only or in printing and binding books and pamphlets, but not engaged in publishing. Establishments primarily engaged in publishing, or in publishing and printing books and pamphlets, are classified in industry 2731. Establishments engaged in both printing and binding books, but primarily binding books printed elsewhere, are classified in industry 2789.

Establishments classified in industry 2732 are similar in character to some establishments primarily engaged in commercial letterpress printing (industry 2751) and in commercial lithographing (industry 2752). The distinction is that all the establishments classified in industry 2732 derive the greater part of their revenue from printing books and pamphlets, while such operations are secondary activities for establishments classified in industries 2751 and 2752. For a detailed list of products of industry 2732, refer to table 6A, product codes 2732111 to 2732255.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Receipts of the Book Printing Industry in 1967 totaled $787.4 million. This included receipts from book printing (primary products), valued at $626.6 million, receipts from

activities (secondary products) valued at $149.7 million, and miscellaneous receipts (mainly resales) of $11.1 million.

This industry's receipts from book printing (primary products) in 1967 represented 81 percent (specialization ratio) of its total receipts (primary and secondary). The industry specialization ratio in 1963 was 78 percent. Secondary receipts for this industry in 1967 consisted mainly of commercial printing, lithographic ($87.0 million), and commercial printing, except lithographic ($35.7 million).

Industry 2732 receipts from book printing (primary products) in 1967 represented 70 percent (coverage ratio) of these receipts valued at $900.3 million received by all industries. In 1963, the coverage ratio was 69 percent. Other industries with receipts from book printing (primary products) consisted mainly of industry 2752, Commercial Printing, Lithographic, $156.3 million; industry 2751, Commercial Printing, Except Lithographic, $81.5 million.

As indicated in the introduction, small establishments generally with less then 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2732, these establishments accounted for approximately 0.9 percent of payroll and 0.8 percent of value added by manufacture.

2741--MISCELLANEOUS PUBLISHING

This industry comprises establishments primarily engaged in miscellaneous publishing activities, not elsewhere classified, whether or not engaged in printing. Establishments primarily engaged in offering financial, credit, or other business services, and which may publish directories as part of this service, are not included in this industry but are classified in Service Industries. For a detailed list of products of industry 2741, refer to table 6A, product codes 2741111 to 2741398.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Receipts of the Miscellaneous Publishing Industry in 1967 totaled $605.3 million. This included receipts from miscellaneous publishing (primary products), valued at $540.6 million, receipts from other activities (secondary products) valued at $43.3 million, and miscellaneous receipts of $21.4 million.

This industry's receipts from miscellaneous publishing (primary products) in 1967 represented 93 percent (specialization ratio) of its total receipts (primary and secondary) The industry specialization ratio in 1963 was 92 percent. Secondary receipts for this industry in 1967 consisted mainly of book publishing ($13.6 million), and periodicals ($11.1 million).

Industry 2741 receipts from miscellaneous publishing (primary products) in 1967 represented 89 percent (coverage ratio) of these receipts valued at $608.6 million received by all industries. In 1963, the coverage ratio was 84 percent. Other industries with receipts from miscellaneous publishing (primary products) consisted mainly of industry 2721, Periodicals, $46.2 million; industry 2731, Book Publishing, $12.0 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2741, these establishments accounted for approximately 4.7 percent of payroll and 4.4 percent of value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967

Note: In 1967, 1963, and 1958, the number of companies in industry 2711 was 7,589, 7,982, and 7,947, respectively; in industry 2721: 2,430, 2,582, and 2,246; industry 2731: 963, 936, and 883; industry 2732: 720, 662, and 785; industry 2741: 1,433, 1,308, and 1,037. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry. Data prior to 1963 exclude Alaska and Hawaii to avoid disclosing individual company figures.

TABLE 1B. Selected Operating Ratios: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of receipts (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. X Not applicable. (NA) Not available. D Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Under 50 thousand (or under 50 employees).

[1]The proportion of product shipments (both primary and secondary) of the industry represented by primary products.

[2]The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

TABLE 4. General Statistics, by Employment Size of Establishment: 1967

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e]Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees.)

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Receipts; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Ind. code	Industry and census year	Value of receipts					Value of primary activities reported			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. B+C (percent)	Total, made in all industries (million dollars)	Made in this industry (million dollars)	Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)

TABLE 5B. Industry-Product Analysis—Receipts by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

27413 00	Other miscellaneous publishing, n.s.k.	4.9	13.9
27410 00	Miscellaneous publishing, n.s.k. (For companies with 10 or more employees. See Note.)	36.2	20.6
27410 02	Miscellaneous publishing, n.s.k. (For companies with less than 10 employees. See Note.)	33.0	

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]From 10 to 30 percent of this figure was estimated. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.

[1]Includes paid, free, bulk, etc. The term "issue" has been defined to mean the sum of all "editions" published on a given day, in the case of the establishment publishing newspapers on a combined frequency of issue basis (morning and Sunday, evening and Sunday, etc.). Separate average circulation figures were figured for the morning editions, evening editions, and Sunday editions.

[2]Includes all daily and Sunday newspapers published in the United States whether in English or foreign languages. (See text for a more complete description of what constitutes a newspaper in the census of manufactures.)

[3]Circulation data for weekly and other newspapers is not shown because this information was not reported by many small newspapers.

[4]In 1967 establishments with less than 10 employees were not required to file a report specifying their source of receipts but were required to furnish that information in 1963. Thus a substantial portion of product code 2711002 would be included in these codes.

[5]Distributed 75 percent or more through magazine wholesalers in 1963.

[6]In 1963 there was $38.6 million of shipments of patterns reported in industry 2649, Converted Paper Products, N.E.C. In 1967 all patterns are included in industry 2741, Miscellaneous Publishing.

TABLE 6B. Product Classes-Value of Receipts of All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Note: Product class receipts of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1] These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for the value of receipts either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at the individual product level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

[2] In 1967 establishments with less than 10 employees were not required to file a report specifying their source of receipts as had been required in previous censuses. A substantial portion of code 27110 would be included in codes 27113 and 27114 if they had reported.

	Cost	Million dollars..	25.2	4.5	2.3	4.6	1.5
	Quantity of electric energy generated less quantity sold	Million kw.-hrs..	0.7	0.6	-	-	0.1
	Total energy used for heat and power[1]	Million kw.-hrs. equivalent.....	4,505.2	902.5	503.9	1,028.4	244.1

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z)Less than $50 thousand.

[1]Represents the quantity of purchased electric energy and the kilowatt hours equivalent of all fuels used for heat and power.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization--the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization--the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees: Number (1,000)	All employees: Payroll (million dollars)	Production workers: Number (1,000)	Production workers: Man-hours (millions)	Production workers: Wages (million dollars)	Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of receipts (million dollars)	Capital expenditures, new (million dollars)

COMMERCIAL PRINTING AND MANIFOLD BUSINESS FORMS

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2751--Commercial Printing, Except Lithographic
2752--Commercial Printing, Lithographic
2753--Engraving and Plate Printing
2761--Manifold Business Forms

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

2751--COMMERCIAL PRINTING, EXCEPT LITHOGRAPHIC

This industry comprises establishments primarily engaged in commercial or job printing, except lithographic. This industry includes general printing shops, as well as shops specializing in printing newspapers and periodicals for others, and those which specialize in gravure, rotogravure, and screen printing. Establishments primarily engaged in printing books, without publishing and greeting cards, are included in industries 2732 and 2771, respectively. Establishments primarily engaged in printing from lithographic plates are classified in industry 2752. For a detailed list of products of industry 2751, refer to table 6A, product codes 2751115 to 2751998.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Total receipts of the Commercial Printing, Except Lithographic, Industry in 1967 totaled $3,255.5 million. This included receipts from commercial printing, except lithographic (primary products), valued at $2,700.4 million, receipts from other activities (secondary products) valued at $430.3 million, and miscellaneous receipts (mainly resales) of $124.8 million.

This industry's receipts from commercial printing, except lithographic (primary products) in 1967 represented 86 percent (specialization ratio) of its receipts (primary and secondary). The industry specialization ratio in 1963 was 86 percent. Secondary receipts reported by this industry in 1967 consisted mainly of commercial printing, lithographic ($224.5 million), and book printing ($81.5 million).

Industry 2751 receipts from commercial printing, except lithographic (primary products) in 1967 represented 83 percent (coverage ratio) of these receipts valued at $3,265.0

million reported by all industries. In 1963, the coverage ratio was 81 percent. Other industries reporting commercial printing, except lithographic (primary products) consisted mainly of industry 2752, Commercial Printing, Lithographic, $244.0 million; industry 2711, Newspapers, $99.4 million

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2751, these establishments accounted for approximately 7 percent of payroll and 10 percent of value added by manufacture.

2752--COMMERICAL PRINTING, LITHOGRAPHIC

This industry comprises establishments primarily engaged in printing by the lithographic process. The greater part of the work in this industry is performed on a job or custom basis; but in some cases lithographed calendars, maps, posters, decalcomanias, etc., are made for sale. Offset printing, photo-offset printing, and photolithographing are also included in this industry. Establishments primarily engaged in lithographing books and pamphlets, without publishing, are classified in industry 2732, and greeting cards in industry 2771. For a detailed list of products of industry 2752, refer to table 6A, product codes 2752112 to 2752711.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Total receipts of the Commercial Printing, Lithographic, Industry in 1967 totaled $3,139.4 million. This included receipts from commercial printing lithographic (primary products), valued at $2,498.0 million, receipts from other activities (secondary products) valued at $549.3 million, and miscellaneous receipts (mainly resales) of $92.1 million.

This industry's receipts from commercial printing, lithographic (primary products) in 1967 represented 82 percent (specialization ratio) of its receipts (primary and secondary). The industry specialization ratio in 1963 was 80 percent. Secondary receipts reported by this industry in 1967 consisted mainly of commercial printing, except lithographic ($244.0 million), and book printing ($155.0 million).

Industry 2752 receipts from commercial printing, lithographic (primary products) in 1967 represented 80 percent (coverage ratio) of these receipts valued at $3,132.9 million reported by all industries. In 1963, the coverage ratio was 82 percent. Other industries reporting commercial printing, lithographic (primary products) consisted mainly of industry 2751, Commercial Printing, Except Lithographic, $224.5 million; industry 3411, Metal Cans, $100-$200 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2752, these establishments accounted for approximately 4 percent of payroll and 5 percent of value added by manufacture.

2753--ENGRAVING AND PLATE PRINTING

This industry comprises establishments primarily engaged in engraving and etching steel, copper, wood, or rubber plates, in using these plates to print stationery, visiting and other cards, invitations, maps, etc.; and in making woodcuts for use in printing illustrations, posters, etc. Engraving for purposes other than printing is classified in industry 3479. For a detailed list of products of industry 2753, refer to table 6A, product codes 2753012 to 2753075.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Total receipts of the Engraving and Plate Printing Industry in 1967 totaled $137.9 million. This included receipts from engraving and plate printing (primary products), valued at $122.6 million, receipts from other activities (secondary products) valued at $11.8 million, and miscellaneous receipts (mainly resales) of $3.5 million.

This industry's receipts from engraving and plate printing (primary products) in 1967 represented 91 percent (specialization ratio) of its receipts (primary and secondary). The industry specialization ratio in 1963 was 89 percent. Secondary receipts reported by this industry in 1967 consisted mainly of commercial printing, except lithographic ($3.5 million), and commercial printing, lithographic ($2.7 million).

Industry 2753 receipts from engraving and plate printing (primary products) in 1967 represented 81 percent (coverage ratio) of these receipts valued at $151.3 million reported by all industries. In 1963, the coverage ratio was 84 percent. Other industries reporting engraving and plate printing (primary products) consisted mainly of industry 2751, Commercial Printing, Except Lithographic, $9.6 million; industry 2794, Electrotyping and Stereotyping, $4.7 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2753, these establishments accounted for approximately 6 percent of payroll and 8 percent of value added by manufacture.

2761--MANIFOLD BUSINESS FORMS

This industry comprises establishments primarily engaged in designing and printing, by any process, special forms for use in the operation of a business, in single and multiple sets, including carbonized or interleaved with carbon or otherwise processed for multiple reproduction. For a detailed list of products of industry 2761, refer to table 6A, product codes 2761111 to 2761351.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Manifold Business Forms Industry in 1967 totaled $932.3 million. This included shipments of manifold business forms (primary products), valued at $809.2 million, shipments of other products (secondary products) and receipts from other activities valued at $81.5 million, and miscellaneous receipts (mainly resales) of $41.6 million.

This industry's shipments of manifold business forms (primary products) in 1967 represented 91 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 90 percent. Secondary receipts reported by this industry in 1967 consisted mainly of commercial printing, except lithographic ($29.1 million), commercial printing, lithographic ($23.6 million).

Industry 2761 shipments of manifold business forms (primary products) in 1967 represented 90 percent (coverage ratio) of these products valued at $895.8 million shipped by all industries. In 1963, the coverage ratio was 91 percent. Other industries shipping manifold business forms (primary products) consisted mainly of industry 2752, Commercial Printing, Lithographic, $41.4 million; industry 2645, Die-Cut Paper and Board, $23.3 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2761, these establishments accounted for approximately 0.5 percent of payroll and value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967

(See Appendix, Explanation of Terms)

Note: In 1967, 1963, and 1958, the number of companies in industry 2751 was 11,955, 11,979, and (NA), respectively; in industry 2752: 6,718, 6,738, and (NA); industry 2753: 569, 574, and 520; industry 2761: 454, 439, and 685. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. (*)These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

CALIFORNIA	66	38	3.9	30.3	2.9	5.6	21.4	77.9	53.0	131.7	4.6	3.8	56.0

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[3]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

ESTABS. COVERED BY ADMIN. RECORDS[1e]	97	.2	1.3	.2	.3	.9	3.0	2.3	5.3	.2	.5

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e]Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees.)

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Ind. code	Industry and census year	Value of shipments: Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. B+C (percent)	Value of primary product shipments: Total, made in all industries (million dollars)	Made in this industry (million dollars)	Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [r]Revised.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Product code	Class of products, industry and miscellaneous receipts	All industries	Commercial printing, except lithographic (SIC 2751)	Commercial printing, lithographic (SIC 2752)	Engraving and plate printing (SIC 2753)	Manifold business forms (SIC 2761)	Other industries

See footnotes at end of table.

TABLE 6A. Value of Shipments by All Producers: 1967 and 1963 -Continued

(Includes value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See appendix under "Value of shipments")

Product code	Product	Value of shipments including interplant transfers (million dollars)	
		1967	1963
2761- --	MANIFOLD BUSINESS FORMS, TOTAL	895.8	598.4
27611 --	Continuous business forms	480.2	291.1
27611 11	Imprinted stock forms	81.2	15.9
27611 15	Stock forms	81.7	53.9
27611 21	Specially printed (produced to individual order) and spirit duplicating paper plates	249.3	169.9
27611 25	Tabulating cards, continuous (single tabulating cards in continuous forms, with or without a medial strip between cards, with or without a side voucher, or top or bottom voucher)	19.4	(NA)
27611 31	Fanfold (multiple copy form of two or more parts, in which the parts are hinged and joined; fanfold including any combined form in which 50 percent or more of the parts are so hinged)	21.8	25.9
27611 51	Autographic register (any form, strip or fanfold of any number of parts in continuous rolls or folded packs sold for use in an autographic register)	24.1	22.2
27611 00	Continuous business forms, not distributed by kind	2.7	3.2
27612 --	Unit-set forms	347.4	258.0
27612 11	Stocks, including imprinted	58.9	20.3
27612 51	Specially printed (produced to individual order)	250.1	216.7
27612 61	Tabulating card sets (any combination of one or more cards assembled and joined with any sheet, with or without carbon, held together by a common perforated stub, not in continuous style)	36.9	17.3
27612 00	Unit-set forms, not distributed by kind	1.5	3.6
27613 --	Sales and other manifold books except food and beverage checks	44.2	39.6
27613 11	Stock (excluding imprinted)	9.5	5.3
27613 51	Specially printed (produced to individual order)	34.7	34.3
27610 00	Manifold business forms, n.s.k. (For companies with 10 or more employees. See note.)	18.7	9.8
27610 02	Manifold business forms, n.s.k. (For companies with less than 10 employees. See note.)	5.3	

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]From 10 to 30 percent of this figure was estimated.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Kentucky	BB	(1)	Texas	BB	(1)	California	6.1	8.9

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

Standard notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data.

[2]In 1954 and 1947 products of product classes 27514, Financial and legal printing (letterpress), 27515, Advertising printing (letterpress), were included with product class 27516, Other general job printing (letterpress).

[3]In 1954 and 1947 products of product classes 27524, Financial and legal printing, 27525 Advertising printing, were included in product class 27526, Other commercial printing.

[4]Data for 1954 and 1947 are not available because "other (than manifold) business forms" were included with manifold business forms, therefore comparable data is not available.

970099	All other materials and components, parts, containers, and supplies consumed; including metal type, etc	.....	(X)	47.1	(X)	30.2

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: -Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.

[1]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967, this includes estimates for companies that were not mailed report forms.

TABLE 7B. Fuels and Electric Energy Consumed: 1967

(See Appendix, Explanation of Terms)

Code	Item	Unit of measure	Printing, except lithographic (SIC 2751)	Printing, lithographic (SIC 2752)
	Cost of purchased fuels and electric energy, total	Million dollars.	27.0	23.2
	Cost of purchased fuels, total	Million dollars.	8.9	6.6
121005	Coal (anthracite, bituminous, and lignite):			
	Quantity	1,000 short tons	10.4	15.6
	Cost	Million dollars.	.1	.1
	Fuel oil, total:			
	Quantity	1,000 barrels...	494.0	211.9
	Cost	Million dollars.	1.7	.8
291141	Distillate:			
	Quantity	1,000 barrels...	211.1	111.9
	Cost	Million dollars.	.9	.5
291151	Residual:			
	Quantity	1,000 barrels...	282.9	100.0
	Cost	Million dollars.	.8	.3
131300	Gas (natural, manufactured mixed, blast-furnace, coke-oven, and other gas):			
	Quantity	Million cu. ft..	6,674.5	3,457.3
	Cost	Million dollars.	3.8	2.5
960011	Other fuels (gasoline, LPG, wood, etc.)	...do.....	.7	.5
975000 976000	Fuels, n.s.k	...do.....	2.6	2.7
	Purchased electric energy:			
960012	Quantity	Million kw.-hrs.	1,436.5	922.2
	Cost	Million dollars.	18.1	16.6
	Quantity of electric energy generated less quantity sold	Million kw.-hrs.	.9	4.6
	Total energy used for heat and power[1]	Million kw.-hrs. equivalent.....	5,610.1	3,657.8

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]Represents the quantity of purchased electric energy and the kilowatt-hours equivalent of all fuels used for heat and power.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments	All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new
			Number	Payroll	Number	Man-hours	Wages				
		(number)	(1,000)	(million dollars)	(1,000)	(millions)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

GREETING CARDS; BOOKBINDING; AND PRINTING TRADE SERVICES

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2771--Greeting Card Publishing
2782--Blankbooks, Looseleaf Binders, and Devices
2789--Bookbinding and Related Work
2791--Typesetting
2793--Photoengraving
2794--Electrotyping and Stereotyping

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (table 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

2771--GREETING CARD PUBLISHING

This industry comprises establishments primarily engaged in the designing, publishing, and printing by any process of greeting cards for all occasions. For a detailed list of products of industry 2771, refer to table 6A, product codes 27711 11 to27712 51.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Greeting Card Publishing Industry in 1967 totaled $517.9 million. This included receipts from greeting card publishing and printing (primary products), valued at $412.4 million, shipments of other products (secondary products) valued at $63.6 million, and miscellaneous receipts (mainly resales) of $41.9 million.

This industry's receipts from greeting card publishing and printing (primary products) in 1967 represented 87 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 92 percent. Secondary products shipped by this industry in 1967 consisted mainly of converted paper products, n.e.c. ($31.4 million), and sanitary food containers ($10-$20 million).

Industry 2771 receipts from greeting card publishing and printing (primary products) in 1967 represented 93 percent (coverage ratio) of these receipts valued at $441.4 million reported by all industries. In 1963, the coverage ratio was 96 percent. Other industries reporting greeting cards (primary products) consisted mainly of industry 2752, Com-

mercial Printing, Lithographic, $15.5 million; industry 2649, Converted Paper Products, N.E.C., $6.9 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2771, these establishments accounted for 0.7 percent of payroll and 0.7 percent of value added by manufacture.

2782--BLANKBOOKS, LOOSELEAF BINDERS AND DEVICES

This industry comprises establishments primarily engaged in manufacturing blankbooks, looseleaf devices, and library binders, and in ruling paper. For a detailed list of products of industry 2782, refer to table 6A, product codes 27821 11 to 27822 71.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Blankbooks and Looseleaf Binders Industry in 1967 totaled $381.3 million. This included shipments of blankbooks and looseleaf binders (primary products), valued at $319.4 million, shipments of other products (secondary products) valued at $51.7 million, and miscellaneous receipts (mainly resales) of $10.2 million.

This industry's shipments of blankbooks and looseleaf binders (primary products) in 1967 represented 86 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 88 percent. Secondary products shipped by this industry in 1967 consisted mainly of converted paper products, n.e.c., ($22.4 million), commercial printing, except lithographic ($5.8 million).

Industry 2782 shipments of blankbooks and looseleaf binders (primary products) in 1967 represented 88 percent (coverage ratio) of these products valued at $362.3 million shipped by all industries. In 1963, the coverage ratio was 88 percent. Other industries shipping blankbooks and looseleaf binders (primary products) consisted mainly of industry 2649, Converted Paper Products, N.E.C., $16.9 million; industry 2752, Commercial Printing, Lithographic, $9.6 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2782, these establishments accounted for 1.5 percent of payroll and 1.6 percent of value added by manufacture.

2789--BOOKBINDING AND RELATED WORK

This industry comprises establishments primarily engaged in edition, trade, job, and library bookbinding; in book or paper bronzing, gilding, and edging; in map and sample mounting; and other services related to bookbinding. Establishments primarily engaged in binding books printed elsewhere are classified in this industry but those primarily binding books printed in the same establishments are classified in Group 273, Books. For a detailed list of products of industry 2789, refer to table 6A, product codes 27891 13 to 27892 91.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Bookbinding and Related Work Industry in 1967 totaled $340.6 million. This included receipts from bookbinding and related work (primary products), valued at $301.1 million, shipments of other products (secondary products) valued at $17.7 million, and miscellaneous receipts (mainly contract work on materials owned by others) of $21.8 million.

This industry's receipts from bookbinding and related work (primary products) in 1967 represented 94 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 95 percent. Secondary products shipped by this industry in 1967 consisted mainly of blankbooks and looseleaf binders ($8.2 million), and book publishing ($2.9 million).

Industry 2789 receipts from bookbinding and related work (primary products) in 1967 represented 89 percent (coverage ratio) of these receipts valued at $337.5 million reported by all industries. In 1963, the coverage ratio was 83 percent. Other industries reporting bookbinding and related work (primary products) consisted mainly of industry 2732, Book Printing, $13.0 million; Industry 2731, Book Publishing, $9.2 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2789, these establishments accounted for 3.4 percent of payroll and 4.5 percent of value added by manufacture.

2791--TYPESETTING

This industry comprises establishments primarily engaged in typesetting for the trade, including advertisement typesetting. For a detailed list of products of industry 2791, refer to table 6A, product codes 27910 11 to 27910 15.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Typesetting Industry in 1967 totaled $356.7 million. This included receipts from typesetting (primary products), valued at $333.9 million, shipments of other products (secondary products) valued at $16.1 million, and miscellaneous receipts (mainly resales) of $6.7 million

This industry's receipts from typesetting (primary products) in 1967 represented 95 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 95 percent. Secondary products shipped by this industry in 1967 consisted mainly of commercial printing, lithographic ($5.0 million) electrotyping and stereotyping ($3.2 million).

Industry 2791 receipts from typesetting (primary products) in 1967 represented 92 percent (coverage ratio) of these receipts valued at $362.1 million reported by all industries. In 1963, the coverage ratio was 90 percent. Other industries reporting typesetting (primary products) consisted mainly of industry 2732, Book Printing, $10.5 million; industry 2752, Commercial Printing, Lithographic, $8.2 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2791, these establishments accounted for 3.8 percent of payroll and 5.4 percent of value added by manufacture.

2793--PHOTOENGRAVING

This industry comprises establishments primarily engaged in preparing photoengraving plates (halftones and line-cuts). These establishments do not, as a rule, print from the plates which they make, but prepare them for use by others.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Photoengraving Industry in 1967 totaled $234.3 million. This included receipts from photoengraving (primary products), valued at $214.6 million, shipments of other products (secondary products) valued at $14.3 million, and miscellaneous receipts (mainly resales) of $5.4 million.

This industry's receipts from photoengraving (primary products) in 1967 represented 94 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 95 percent. Secondary products shipped by this industry in 1967 consisted mainly of commercial printing, lithographic ($5.3 million) electrotyping and stereotyping ($2.6 million).

Industry 2793 receipts from photoengraving (primary products) in 1967 represented 91 percent (coverage ratio) of these receipts valued at $237.1 million reported by all industries. In 1963, the coverage ratio was 91 percent. Other industries reporting photoengraving (primary products) consisted mainly of industry 2711, Newspapers, $7.5 million; industry 2751, Commercial Printing, Except Lithographic, $6.9 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2793, these establishments accounted for 2.8 percent of payroll and 4.0 percent of value added by manufacture.

2794--ELECTROTYPING AND STEREOTYPING

This industry comprises establishments primarily engaged in preparing electrotype and stereotype plates. These establishments do not, as a rule, print from the plates which they make, but prepare them for use by others. For a detailed list of products of industry 2794, refer to table 6A, product codes 27940 11 to 27940 51.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Electrotyping and Stereotyping Industry in 1967 totaled $62.1 million. This included receipts from electrotyping and stereotyping (primary products), valued at $52.1 million, shipments of other products (secondary products) valued at $6.6 million, and miscellaneous receipts (mainly resales) of $3.4 million.

This industry's receipts from electrotyping and stereotyping (primary products) in 1967 represented 89 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 87 percent. Secondary products shipped by this industry in 1967 consisted mainly of engraving and plate printing ($2-$5 million).

Industry 2794 receipts from electrotyping and stereotyping (primary products) in 1967 represented 85 percent (coverage ratio) of these receipts valued at $61.4 million

reported by all industries. In 1963, the coverage ratio was 86 percent. Other industries reporting electrotyping and stereotyping (primary products) consisted mainly of industry 2791, Typesetting,$3.2 million; industry 2793, Photoengraving,$2.6 million

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For 2794, these establishments accounted for 1.0 percent of payroll and 1.5 percent of value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	End-of-year inventories	Specialization ratio	Coverage ratio

Note: In 1967, 1963, and 1958, the number of companies in industry 2771 was 203, 239, and 265, respectively; in industry 2782: 402, 380, and 407; industry 2789: 1,008, 1,038, and 966; industry 2791: 1,518, 1,271, and 1,181; industry 2793: 732, 872, and 897; industry 2794: 124, 170, and 206. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: (NA) Not available. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. (*) These figures either have associated standard error of estimate exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250 to 499 employees
CC - 500 to 999 employees
EE - 1,000 to 2,499 employees
FF - 2,500 employees and over

ESTABS. COVERED BY ADMIN. RECORDS[1 e]	28	(Z)	.3	(Z)	.1	.2	.7	.2	.9	-	(Z)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e]Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees.

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Ind. code	Industry and census year	Value of shipments: Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. B+C (percent)	Value of primary product shipments: Total, made in all industries (million dollars)	Made in this industry (million dollars)	Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Prod. code	Class of products, industry and miscellaneous receipts	All industries	Greeting card publishing (SIC 2771)	Blankbooks; looseleaf binders (SIC 2782)	Bookbinding and related work (SIC 2789)	Type-setting (SIC 2791)	Photo-engraving (SIC 2793)	Electro-typing and stereo-typing (SIC 2794)	Other industries

Product code	Product	Total shipments including interplant transfers (million dollars)	
		1967	1963
2782- --	BLANKBOOKS AND LOOSELEAF BINDERS, TOTAL	362.3	252.0
27821 --	Blankbook making, total	186.8	124.3
27821 11	Columnar, ledger and account books, including record books which are section-sewed and center stitched (also including time books and minature account books)	10.2	10.3
27821 31	Albums and scrapbooks, including record, photograph, and stamp albums, etc	39.4	24.0
27821 35	Diaries and appointment books	5.8	7.5
27821 51	Columnar pads (lithographed, printed, ruled; bound or wirebound)	4.9	18.7
27821 53	Memo books, case-made, sewed or glued to leather, imitation leather, or similar materials	2.3	
27821 55	Miscellaneous blankbooks, including address books, bound roll books, drafts, receipts, and financial notes	17.9	
	Checkbooks, including inserts and refills but excluding those in continuous form and die cut:		
27821 43	Letterpress process	84.8	45.7
27821 45	Lithographic process	18.5	14.4
27821 61	Paper ruling on materials owned by others (pen and disc)	0.9	1.7
27821 00	Blankbook making and paper ruling, n.s.k	2.1	2.0
27822 --	Looseleaf binders and devices, total	153.8	119.6
27822 13	Looseleaf forms, record type	15.7	15.8
27822 21	Looseleaf indexes	5.6	6.1
27822 33	Looseleaf binders, ring and prong-types, including looseleaf memo books	90.1	84.1
27822 35	Post binders, i.e., all types of post binders such as thin post, heavy post, and nylon post	14.0	
27822 39	Other looseleaf binders, including minute and municipality record books and catalog covers	10.2	
27822 71	Looseleaf parts sold separately	13.0	10.8
27822 00	Looseleaf devices, binders, forms, and fillers, n.s.k	5.2	2.7
27820 00	Blankbooks and looseleaf binders, n.s.k..(For companies with 10 or more employees. See note.)	15.2	8.1
27820 02	Blankbooks and looseleaf binders, n.s.k..(For companies with less than 10 employees. See note.)	6.5	
2789- --	BOOKBINDING AND RELATED WORK	337.5	243.2
27891 --	Edition, library and other hard cover bookbinding:		
	Edition, library and trade binding (printing and binding of books by the publisher are included in the book publishing industry, SIC 2731. Printing and binding of books published by others are included in the data for book printing, SIC 2732.)	167.4	109.3
	Edition binding (hardbound):		
27891 13	General trade books	45.3	27.6
27891 15	Textbooks	35.5	20.9
27891 17	Reference books-e.g., encyclopedias, dictionaries, etc	24.8	20.1
27891 19	Other books	13.6	13.1
27891 41	Library binding, including rebinding and prebinding of books for library use, hard cover binding of periodicals and records, and other hard cover binding, except edition	39.5	24.2
27891 00	Edition, library, and other hard cover bookbinding, not reported by kind	8.7	3.3

See footnotes at end of table.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963—Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Value of receipts (million dollars) 1967	1963
	BOOKBINDING AND RELATED WORK--Continued		
27892 --	Other book and pamphlet binding and related binding work	135.4	117.6
27892 23	Soft cover binding of books (49 or more pages, exclusive of the covers)	16.1	8.8
27892 25	Pamphlet and other soft cover binding	42.8	37.5
27892 61	Mechanical binding (wire, plastic, etc.) of products printed elsewhere	19.2	16.1
27892 91	Receipts for miscellaneous bookbinding work (material printed elsewhere); embossing, varnishing, indexing, mounting, and other service operations related to bookbinding, including sample and color cards	51.8	49.9
27892 00	Other book and pamphlet binding and related binding work not reported by kind	5.5	5.3
27890 00	Bookbinding (books printed elsewhere), n.s.k. (For companies with 10 or more employees. See Note.)	19.9	16.3
27890 02	Bookbinding (books printed elsewhere), n.s.k. (For companies with less than 10 employees. See Note.)	14.8	(X)
2791- --	TYPESETTING		
27910 --	Typesetting	362.1	249.6
27910 11	Hot metal and related typesetting, including all hand and machine typesetting, composition and such other typographic services involving metal and not associated with photographic (film) typesetting or cold (typewriter) typesetting and their related processes	253.6	196.1
27910 13	Photographic typesetting, including phototypesetting, photolettering and such other typographic processes and services which employ photographic equipment and/or photographic materials and techniques	41.7	16.7
27910 15	Cold typesetting, including all nonmetallic, nonphotographic typesetting and composition normally produced by direct-impression of a typewriter mechanism, as well as subsequent associated procedures and related processes	18.7	14.8
27910 00	Typesetting, n.s.k. (For companies with 10 or more employees. See Note)	28.1	22.0
27910 02	Typesetting, n.s.k. (For companies with less than 10 employees. See Note)	20.0	
2793- --	PHOTOENGRAVING		
27930 11	Photoengraving plates made for others	237.1	214.7
2794- --	ELECTROTYPING AND STEREOTYPING, TOTAL	61.4	71.9
	Duplicate plates made for others:		
27940 11	Electrotypes	35.2	47.8
27940 31	Stereotypes	2.4	2.4
27940 51	Matrices	16.0	19.2
27940 00	Electrotyping, stereotyping, and matrices made for others, not reported separately (For companies with 10 or more employees. See Note.)	6.9	2.5
27940 02	Electrotyping, stereotyping, and matrices made for others, not reported separately (For companies with less than 10 employees. See Note)	0.9	(X)

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments	
	1967	1963
GREETING CARDS, PUBLISHERS' SALES (27711)

California	1.6	3.4

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operation. See Appendix, Explanation of terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1] This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

TABLE 6C. Product Classes–Quantity and Value Shipped by All Manufacturing Establishments: 1947, 1954, 1958, 1963 to 1967

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufacturers volumes for this period. The figures shown in parentheses in the value of shipments columns either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data.

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963

(See Appendix, Explanation of Terms)

Code	Material	1967		1963	
		Total quantity of paper consumed (1,000 short tons)	Delivered cost (million dollars)	Total quantity of paper consumed (1,000 short tons)	Delivered cost (million dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. e From 10 to 30 percent of this figure was estimated. (Z) Under $50 thousand.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees: Number (1,000)	All employees: Payroll (million dollars)	Production workers: Number (1,000)	Production workers: Man-hours (millions)	Production workers: Wages (million dollars)	Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)

Chemicals and Allied Products

28A Industrial chemicals

28B Plastics materials, synthetic rubber, and manmade fibers

28C Drugs

28D Soap, cleaners, and toilet goods

28E Paints and allied products; gum and wood chemicals

28F Agricultural chemicals

28G Miscellaneous chemical products

This major group includes establishments producing basic chemicals, and establishments manufacturing products by predominantly chemical processes. Establishments classified in this major group manufacture three general classes of products: (1) Basic chemicals such as acids, alkalies, salts, and organic chemicals; (2) chemical products to be used in further manufacture such as synthetic fibers, plastics materials, dry colors, and pigments; and (3) finished chemical products to be used for ultimate consumption, such as drugs, cosmetics, and soaps, or to be used as materials or supplies in other industries, such as paints, fertilizers, and explosives. The mining of natural rock salt and the recovery of sodium, potassium, and boron compounds from natural salts are classified in mining industries. Establishments primarily engaged in manufacturing nonferrous metals and high percentage ferroalloys are classified in Major Group 33. Primary Metal Industries; silicon carbide, in industry 3291, Abrasive Products; and baking powder, other leavening compounds, and starches in Major Group 20, Food and Kindred Products. Establishments primarily engaged in packaging, repacking, and bottling of purchased chemicals and allied products are classified in trade industries.

The industrial classification system provides for separate groupings of plant manufacturing by chemical process products which are essentially (a) raw materials for other industries, and (b) finished consumption goods such as drug preparations, paint, soap, fertilizers, formulated insecticides or cosmetics. While these distinctions may be made for a host of chemical products, they are by no means definitive in the case of a number of such products and of the plants producing them. When such problems arose, the decisions made were based primarily upon the following criteria:

(a) Whether the product produced is a compound or a mixture and/or formulation. In the former case, the product is considered to be a basic chemical while mixtures and formulations have the characteristic of finished consumer goods;

(b) Whether the plant is engaged in activities which result in a product chemically different from the raw materials it uses (prime producers) or whether the resultant product is merely a modified form or grade of the chemical purchased. For example, distinctions are made between plants producing high strength hydrogen peroxide (prime producer) and those making a weak strength product from purchased high strength material; or between plants whose products are shipped to chemical processors and those whose activity is devoted to the preparation of packaged products, destined primarily for household or consumer use.

The classification system not only draws a line of demarcation between chemical processing industries and chemical consuming industries, but also requires in a few areas that distinctions be made among the latter industries. For example, the industry classification system specifies that plants primarily engaged in manufacturing mixed fertilizers from one or more phosphatic fertilizer materials produced in the same establishment be classified in industry 2871, Fertilizers, while plants engaged only in mixing fertilizers be classified in industry 2872, Fertilizers, mixing only.

See the "Introduction" for a description of the conditions under which plants performing some manufacturing may be classified in "business" or "mining." For example, plants producing salt (sodium chloride) by evaporation are classified in manufacturing, and those mining rock salt, in mining. While measures of the volume of merchandising activity (sale of goods bought and resold without further processing) are available (see table 3), there are none indicating the volume of manufacturing performed by establishments classified in Wholesale or Retail Trade. However, the amount is believed to be relatively significant in such fields as Polishes and Sanitation Goods (industry 2842), Fertilizers (industries 2871 and 2872) and Agricultural Chemicals, N.E.C. (industry 2879).

In recent years the Federal Government has expanded its operation in the chemical industries. Following the SIC recommendations, census data since 1947 include information for all government-owned and contractor-operated facilities. The amount of government activity included in industry 2819, Inorganic Chemicals for 1967, may be determined from table 1A, page 28A-9, or table 3, page 28A-15. Also, see text for Industry 2892, Explosives, page 28G-2, for information on government activity included in data for this industry.

TABLE 1. General Statistics: 1967 and Earlier Years

Year and item	Establishments		All employees[1]		Production workers			Value added by manufacture[2]	Cost of materials[3]	Value of shipments[3]	Capital expenditures, new[4]

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable.

[1] The figures for 1939 through 1967 include data for employees of manufacturing establishments who are engaged in distribution and construction work. The extent to which data for much employees are included in the figures for earlier years is not known.

[2] For the period 1954 to 1967, figures represent adjusted value added by manufacture and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. For 1899 to 1933, cost of contract work was not subtracted from value of products in calculating value added by manufacture.

[3] The total value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry classification. For a more complete explanation, see Introduction.

[4] The figures for 1958 to 1967 include expenditures for plants under construction and not yet in operation.

[5] The figures for 1949 to 1967 include data for Government-owned plants operated by private firms for the account of the Federal Government. See text for further explanation.

[6] In addition to data for operating establishments, figures for employment and payroll for manufacturing central administrative offices and auxiliary units are shown for the years 1949 to 1953 in the annual survey of manufactures volumes. Data for these units are not available for the years 1955 to 1957, 1959 to 1962, 1964 to 1966, and prior to 1949.

[7] These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

[8] The figures prior to 1939 include data for establishments primarily engaged in manufacture of electrometallurgical products, included from 1939 in the "Primary metal" industries. Valued added by manufacture for 1939, include data for these establishments and on a basis comparable with earlier years, was $1,837.5 million.

[9] The figures for 1899 to 1935 but not for later years, include data for establishments primarily engaged in mining of rock salt or in smelting and refining of aluminum. Value added by manufacture for 1937, including data for these establishments and on a basis comparable with 1935, was $1,759.1 million.

[10] The figures for 1899 to 1935, but not for later years, include data for woods employees of the Gum naval stores industry. Woods employees in 1937 (for which data are not included in the figures) were reported as follows: Production and related workers, 30,880 and wages $8.6 million.

[11] The figures for 1899 to 1931 do not include data for establishments primarily engaged in manufacture of ethyl alcohol, included for these years in the figures for the "Food and kindred products" industries.

[12] The figures for 1899 to 1927 include data for establishments other than petroleum refineries engaged in the manufacture of lubricating oils, which are included for later years in the series for the petroleum and coal products industries.

[13] The figures for 1899 to 1925 include data for establishments primarily engaged in manufacturing of vegetable cooking oils, included for later years in the series for the food and kindred products industries.

[14] The figures for 1899 to 1923, but not for later years, include data for certain establishments primarily engaged in manufacture of rubber cement. Value added by manufacture for 1925, including data for these establishments and on a basis comparable with 1923, was $1,321.2 million.

[15] The figures for 1899 only include data for establishments primarily engaged in manufacture of candles. Value added by manufacture for 1904, including data for these establishments and on a basis comparable with 1899, was $287.2 million.

TABLE 2. General Statistics, by Geographic Areas: 1967 and 1963

(See Appendix, Explanation of Terms)

Code	Industry and geographic area[1]	1967										1963	
		Establishments		All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials[2] (million dollars)	Value of shipments[2] (million dollars)	Capital expenditures, new (million dollars)	All employees (1,000)	Value added by manufacture (million dollars)
		Total (number)	With 20 employees or more (number)	Number (1,000)	Payroll (million dollars)	Number (1,000)	Man-hours (millions)	Wages (million dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]The value of shipments and cost of materials for industry groups (2- and 3-digit) includes extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

[1]The value of shipments and cost of materials for industry groups (2- and 3-digit) includes extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

INDUSTRIAL CHEMICALS

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2812--Alkalies and Chlorine
2813--Industrial Gases
2815--Cyclic Intermediates, Dyes, Organic Pigments (Lakes and Toners), and Cyclic (Coal Tar) Crudes
2816--Inorganic Pigments
2818--Industrial Organic Chemicals, Not Elsewhere Classified
2819--Industrial Inorganic Chemicals, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

This group includes establishments primarily engaged in manufacturing basic industrial inorganic and organic chemicals. Establishments primarily engaged in manufacturing formulated agricultural pesticides are classified in industry 2879; organic and inorganic medicinal chemicals, drugs and medicines in industry 2833; wood distillation products and naval stores in Group 286; and soap, glycerin (except synthetic), and cosmetics in Group 284.

In order to avoid duplicating the reports furnished to the U.S. Tariff Commission for synthetic organic chemicals, establishments reporting these products to the U.S. Tariff Commission were requested to report dollar values by product classes to the Bureau of the Census including the value of those synthetic organic chemicals shipped as interplant transfers. As indicated in the table below, the dollar values reported to the Census Bureau differ from those reported to the U.S. Tariff Commission.

In general, data reported to the Census Bureau are for the value of the product as shipped whether it is a chemical compound or a finished product (preparation or mixture). Sales figures reported to the Tariff Commission represent the value of the organic chemical compound whether it is shipped as such or incorporated in another product. Also, reports to the Census Bureau are based on plant reports and the dollar shipment figures represent the valuation (f.o.b. plant) of all goods physically shipped from the producing site. Thus the Census data include products shipped on consignment and interplant transfers (separate measures are shown in table 6A) while the U.S. Tariff Commission data represent sales on a company basis by primary producers, only when accompanied by passage of title. Thus, the commercial shipment figures reported by Census most nearly correspond to the information in the Tariff report.

In addition, there are specific reasons why the figures for certain product classes published by the two agencies differ. For example, the U.S. Tariff Commission total for tar crudes includes data furnished to the Coal Economics Division of the U.S. Bureau of Mines by coke oven operators, and data furnished to the American Gas Association by producers of water-gas and oil-gas tar. The Census Bureau total appearing in this report does not include these figures since the data for byproduct ovens are classified and shown in industry 3312, and establishments operating medium and low temperature carbonization plants and retorts are excluded from the census of manufactures.

Despite these differences in the two sets of data, they should be considered as complementary: Those of the Census Bureau represent the shipment values by plants classified in manufacturing industries for groups of synthetic organic chemicals in the form in which they are actually shipped, and those of the U.S. Tariff Commission, represent company sales and production for a detailed list of products.

Shipments and Interplant Transfers of Synthetic Organic Chemicals: 1967

Product code	Product of product class	As reported by--		
		Bureau of the Census		U.S. Tariff Commission
		Shipments including interplant transfers (million dollars)	Commercial shipments only (million dollars)	Sales (million dollars)
28151 --	Intermediates	1,066	796	1,000
28152 --	Synthetic organic dyes	326	323	332
28153 --	Synthetic organic pigments, lakes, and toners	162	130	108
28155 --	Tar crudes	88	78	136
28181 --	Miscellaneous cyclic chemical products	315	271	284
28182 --	Miscellaneous acyclic chemicals and chemical products	4,052	3,165	3,192
28183 --	Synthetic organic chemicals, n.e.c.:			
28183 11	Flavor and perfume materials	119	(D)	93
28183 31	Rubber processing chemicals	152	137	132
28183 51	Plasticizers	309	283	261
28184 --	Pesticides and other synthetic organic agricultural chemicals	308	283	787

(D) Withheld to avoid disclosing figures for individual companies.
n.e.c. Not elsewhere classified.

2812--ALKALIES AND CHLORINE

This industry comprises establishments primarily engaged in manufacturing alkalies and chlorine. For a detailed list of products of industry 2812, refer to table 6A, product codes 2812111 to 2812490.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Alkalies and Chlorine Industry in 1967 totaled $719.8 million. This included shipments of alkalies and chlorine (primary products), valued at $465.4 million, shipments of other products (secondary products) valued at $231.8 million, and miscellaneous receipts of $22.7 million.

This industry's shipments of alkalies and chlorine (primary products) in 1967 represented 67 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 66 percent. Secondary products shipped by this industry in 1967 consisted mainly of industrial inorganic chemicals, n.e.c., and industrial organic chemicals, n.e.c.

Industry 2812 shipments of alkalies and chlorine (primary products) in 1967 represented 75 percent (coverage ratio) of these products valued at $623.0 million shipped by all industries. In 1963, the coverage ratio was 79 percent. Other industries shipping alkalies and chlorine (primary products) consisted mainly of industry 2818, Industrial Organic Chemicals, N.E.C., and industry 2819, Industrial Inorganic Chemicals, N.E.C.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2812, these establishments accounted for 0.0 percent of payroll and 0.0 percent of value added by manufacture.

2813--INDUSTRIAL GASES

This industry comprises establishments primarily engaged in the manufacturing of gases for sale in compressed, liquid, and solid forms. Establishments primarily engaged in manufacturing fluorine, ammonia, and sulfur dioxide are classified in industry 2819; and chlorine in industry 2812. Distributors of industrial gases and establishments primarily engaged in shipping liquid oxygen are classified in trade. For a detailed list of products of industry 2813, refer to table 6A, product codes 2813200 to 2813498.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Industrial Gases Industry in 1967 totaled $588.7 million. This included shipments of industrial gases (primary products), valued at $481.7 million, shipments of other products (secondary products) valued at $19.3 million, and miscellaneous receipts of $87.8 million.

This industry's shipments of industrial gases (primary products) in 1967 represented 96 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 98 percent. Secondary products shipped by this industry in 1967 consisted mainly of natural gas liquids and industrial inorganic chemicals, n.e.c.

Industry 2813 shipments of industrial gases (primary products) in 1967 represented 89 percent (coverage ratio) of these products valued at $543.4 million shipped by all industries. In 1963, the coverage ratio was 87 percent. Other industries shipping industrial gases (primary products) consisted mainly of industry 2819, Industrial Inorganic Chemicals, N.E.C., and industry 2818, Industrial Organic Chemicals, N.E.C.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2813, these establishments accounted for 0.4 percent of payroll and 0.2 percent of value added by manufacture.

2815--CYCLIC INTERMEDIATES, DYES, ORGANIC PIGMENTS (LAKES AND TONERS), AND CYCLIC (COAL TAR) CRUDES

This industry comprises establishments primarily engaged in manufacturing cyclic organic intermediates, dyes, color lakes and toners, and coal tar crudes. Important products of this industry include: (1) derivatives of benzene, toluene, naphthalene, anthracene, pyridine, carbazole, and other cyclic chemical products; (2) synthetic organic dyes; (3) synthetic organic pigments, and (4) cyclic (coal tar) crudes, such as light oils and light oil products; coal tar acids; and products of medium and heavy oil such as creosote oil, naphthalene, anthracene, and their higher homologues, and tar. Establishments primarily engaged in manufacturing coal tar crudes in chemical recovery ovens are classified in industry 3312, and petroleum refineries which produce such products in industry 2911. No attempt was made by the Census Bureau to secure commodity detail for intermediates, dyes or lakes and toners since this information is compiled and published by the U.S. Tariff Commission in Synthetic Organic Chemicals, United States Production and Sales. Likewise, no attempt was made by the Census Bureau to secure commodity detail for the tar crudes manufactured by tar distillers since this information is also compiled and published by the U.S. Tariff Commission in Synthetic Organic Chemicals, United States Production and Sales. Direct comparisons between the product class data reported to the Census Bureau and the product information reported to the U.S. Tariff Commission may not be made since the statistics published by the U.S. Tariff Commission do not show all products produced by tar distillers as distinguished from products produced by petroleum refineries or others. For the total value of the product groupings comprising industry 2815, refer to table 6A, product codes 2815111 to 2815511.

The code number for this industry in the Standard Industrial Classification Manual is unchanged, but the content of the industry has been slightly changed from the classification system used in 1963. The composition of the industry as now constituted, compared with that under the classification system followed in the 1963 Census, is due principally to the addition of plants previously classified as industry 2814, Cyclic (Coal Tar) Crudes.

Value of shipments and other receipts of the Cyclic Intermediates and Crudes Industry in 1967 totaled $1,596.8 million. This included shipments of cyclic intermediates and crudes (primary products), valued at $1,092.1 million, shipments of other products (secondary products) valued at $412.7 million, and miscellaneous receipts of $91.9 million.

This industry's shipments of cyclic intermediates and crudes (primary products) in 1967 represented 73 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was not available. Secondary products shipped by this industry in 1967 consisted mainly of industrial organic chemicals, n.e.c. ($168.4 million), and industrial inorganic chemicals, n.e.c. ($74.6 million).

Industry 2815 shipments of cyclic intermediates and crudes (primary products) in 1967 represented 66 percent (coverage ratio) of these products valued at $1,654.2 million shipped by all industries. In 1963, the coverage ratio was not available. Other industries shipping cyclic intermediates and crudes (primary products) consisted mainly of industry 2818, Industrial Organic Chemicals, N.E.C., $360.2 million; industry 2911, Petroleum Refining, $60.5 million and industry 2821, Plastic Materials and Resins, $42.8 million.

The 1963 specialization and coverage ratios are not available due to changes in the Standard Industrial Classification system as described above.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2815, these establishments accounted for 0.0 percent of payroll and 0.0 percent of value added by manufacture.

2816--INORGANIC PIGMENTS

This industry comprises establishments primarily engaged in manufacturing inorganic pigments. Important products of this industry include black pigments (except carbon black, industry 2895), white pigments and color pigments. Organic color pigments, except animal black and bone black, are classified in industry 2815. For a detailed list of products of industry 2816, refer to table 6A, product codes 2816111 to 2816398.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Inorganic Pigments Industry in 1967 totaled $549.3 million. This included shipments of inorganic pigments (primary products), valued at $472.0 million, shipments of other products (secondary products) valued at $53.7 million, and miscellaneous receipts of $23.5 million.

This industry's shipments of inorganic pigments (primary products) in 1967 represented 90 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 91 percent. Secondary products shipped by this industry in 1967 consisted mainly of industrial inorganic chemicals, n.e.c.

Industry 2816 shipments of inorganic pigments (primary products) in 1967 represented 84 percent (coverage ratio) of these products valued at $560.8 million shipped by all industries. In 1963, the coverage ratio was 87 percent. Other industries shipping inorganic pigments (primary products) consisted mainly of industry 2819, Industrial Inorganic Chemicals, N.E.C., $29.0 million and industry 2815, Cyclic Intermediates and Crudes $16.7 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2816, these establishments accounted for 0.2 percent of payroll and 0.3 percent of value added by manufacture.

2818--INDUSTRIAL ORGANIC CHEMCIALS, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing industrial organic chemicals, not elsewhere classified. Important products of this industry include: (1) noncyclic organic chemicals such as acetic, chloroacetic, adipic, formic, oxalic and tartaric acids and their metallic salts; chloral, formaldehyde and methylamine; (2) solvents such as amyl, butyl, and ethyl alcohols; methanol; amyl, butyl and ethyl acetates; ethel ether, ethylene glycol ether and diethylene glycol ether; acetone, carbon disulfide and chlorinated solvents such as carbon tetrachloride, perchloroethylene and tricholoethylene; (3) polyhydric alcohols such as ethylene glycol, sorbitol, pentaerythritol, synthetic glycerine; (4) synthetic perfume and flavoring materials such as coumarin, methyl salicylate, saccharin, citral, citronellal, synthetic geraniol, ionone, terpineol, and synthetic vanillin; (5) rubber processing chemicals such as accelerators and anti-oxidants, both cyclic and acyclic; (6) placticizers, both cyclic and acyclic, such as esters of phosphoric acid, phthalic anhydride, adipic acid, lauric acid, oleic acid, sebacic acid, and stearic acid; (7) synthetic tanning agents such as naphthalene sulfonic acid condensates; (8) chemical warfare gases; and (9) esters, amines, etc., of polyhydric alcohols and fatty and other acids. Establishments primarily engaged in manufacturing plastic materials and nonvulcanizable elastomers are classified in industry 2821; synthetic rubber in industry 2822; essential oils in industry 2899; wood distillation products, naval stores, and natural dyeing and tanning materials in Group 286; rayon and other synthetic fibers in industries 2823 and 2824; specialty cleaning, polishing, and sanitation preparations in industry 2842; and paints and pigments in Group 285. Distilleries engaged in

the manufacture of grain alcohol for beverage purposes are classified in industry 2085. Detailed product information for industrial organic chemicals are not shown as data for these products are compiled and published by the U.S. Tariff Commission in Synthetic Organic Chemicals, United States Production and Sales. For a detailed list of products of industry 2818, refer to table 6A, product codes 2818111 to 2818598.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Industrial Organic Chemicals, N.E.C., Industry in 1967 totaled $6,377.8 million. This included shipments of industrial organic chemicals, n.e.c. (primary products), valued at $4,461.2 million, shipments of other products (secondary products) valued at $1,705.2 million, and miscellaneous receipts of $211.4 million.

This industry's shipments of industrial organic chemicals, n.e.c. (primary products) in 1967 represented 72 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 72 percent. Secondary products shipped by this industry in 1967 consisted mainly of plastics materials and resins ($417.9 million), cyclic intermediates and crudes ($360.2 million) and industrial inorganic chemicals, n.e.c. ($260.8 million).

Industry 2818 shipments of industrial organic chemicals, n.e.c. (primary products) in 1967 represented 81 percent (coverage ratio) of these products valued at $5,539.4 million shipped by all industries. In 1963, the coverage ratio was 81 percent. Other industries shipping industrial organic chemicals, n.e.c. (primary products) consisted mainly of industry 2815, Cyclic Intermediates and Crudes, $168.4 million; industry 2819, Industrial Inorganic Chemicals, N.E.C., $154.9 million; industry 2821, Plastics Materials and Resins, $148.1 million; and industry 2911, Petroleum Refining, $129.8 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2818, these establishments accounted for 0.1 percent of payroll and 0.1 percent of value added by manufacture.

2819--INDUSTRIAL INORGANIC CHEMICALS, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in manufacturing industrial inorganic chemicals, n.e.c. Important products of this industry include inorganic salts of solium (excluding refined sodium chloride), potassium, aluminum, calcium, chromium, magnesium, mercury, nickel, silver, tin; inorganic compounds such as alums, calcium carbide, hydrogen peroxide, phosphates, sodium silicate, ammonia compounds and anhydrous ammonia; rare earth metal salts and elemental bromine, fluorine, iodine, phosphorus, and alkali metals (sodium, potassium, lithium, etc.). Establishments primarily engaged in mining, milling, or otherwise preparing natural potassium, sodium, or boron compounds (other than common salt) are classified in industry 1474. Beginning with 1954, statistics include information for government-owned plants operated by private firms for the account of the Federal Government but exclude the activities of government-owned and/or operated plants. The 1947 statistics exclude information for all Government plants except Tennessee Valley Authority plants. General statistics (tables 1, 3, and 4) are shown first for all plants (private and government) and second for private plants only. Capital expenditures made by government-owned-privately operated plants are not included because they are paid for by current billings to the United States. For a detailed list of products of industry 2819, refer to table 6A, product codes 2819111 to 2819998.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Industrial Inorganic Chemicals, N.E.C., Industry in 1967 totaled $4,248.4 million. This included shipments of industrial inorganic chemicals, n.e.c. (primary products), valued at $2,900.1 million, shipments of other products (secondary products) valued at $453.9 million, and miscellaneous receipts (mainly contract work on materials owned by others) of $894.4 million.

This industry's shipments of industrial inorganic chemicals, n.e.c. (primary products) in 1967 represented 86 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 88 percent. Secondary products shipped by this industry in 1967 consisted mainly of industrial organic chemicals, n.e.c. ($154.9 million).

Industry 2819 shipments of industrial inorganic chemicals, n.e.c. (primary products) in 1967 represented 78 percent (coverage ratio) of these products valued at $3,719.1 million shipped by all industries. In 1963, the coverage ratio was 74 percent. Other industries shipping industrial inorganic chemicals, n.e.c. (primary products) consisted mainly of industry 2818, Industrial Organic Chemicals, N.E.C., $260.8 million; industry 2871, Fertilizers, $145.5 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2819, these establishments accounted for 0.2 percent of payroll and 0.2 percent of value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	End-of-year inventories	Specialization ratio	Coverage ratio
	[3]Total (number)	With 20 employees or more (number)	Number (1,000)	Payroll (million dollars)	Number (1,000)	Man-hours (millions)	Wages (million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(percent)	(percent)

1958 Census[2]...	580	301	89.9	550.3	58.4	118.7	327.2	1,468.9	1,288.7	2,754.4	138.4	280.9	87	76
	INDUSTRY 2819.--PRIVATELY-OWNED AND OPERATED ESTABLISHMENTS[8]													
1967 Census....	708	348	57.6	458.3	40.1	83.2	293.4	1,687.4	1,859.0	3,513.4	261.4	473.8	87	78
1963 Census....	665	314	51.1	353.1	36.4	74.0	232.4	1,243.8	1,379.4	2,628.0	137.1	312.6	88	74
1958 Census....	569	291	54.0	311.3	38.5	78.8	205.9	930.5	1,052.0	1,979.4	137.4	280.9	87	76

Note: In 1967, 1963, and 1958, the number of companies in industry 2,812 was 19, 19, and 18, respectively; in industry 2,813: 113, 104, and 111; industry 2,815: 115, (NA), and (NA); industry 2,816: 65, 69, and 64; industry 2,818: 339, 343, and 238; industry 2,819 (Part I): 408, 404, and 330; industry 2,819 (Part II): (NA), 401, and 327. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: (NA) Not available. (*) These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

[3]Some of the small establishments in this industry may have been misclassified as to industry. This does not significantly affect the statistics other than the number of establishments or number of companies. (See paragraph in Introduction: "Industry Classification of Establishments" for further explanation.)

[4]Data include value added for government-owned, contractor-operated plants which was estimated based upon averages reported for commercial establishments in prior years.

[5]Data exclude government-owned materials furnished to government owned, contractor-operated plants and includes fuel and electricity purchased by or for these establishments.

[6]Data include a calculated value of shipments for government-owned, contractor-operated plants comprised of adjusted value added (estimated as described in footnote[3]) plus the cost of fuels and electric energy.

[7]Includes expenditures for plants under construction but not in operation. Capital expenditures of government-owned, contractor-operated plants are excluded from the totals for the industry.

[8]Inorganic Chemicals, N.E.C., total includes in addition to privately-owned establishments, government-owned, contractor operated plants. See privately owned plants.

[9]Government-owned, privately operated establishments did not enter into the calculation of "Primary product specialization ratio" or "Coverage ratio" as all dollar receipts for these establishments were included in "Miscellaneous receipts."

TABLE 1B. Selected Operating Ratios: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Production workers as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated.

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over.

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

TABLE 3. Detailed Statistics: 1967

Item	Alkalies and chlorine (SIC 2812)	Industrial gases (SIC 2813)	Cyclic, intermediates and crudes (SIC 2815)	Inorganic pigments (SIC 2816)	Industrial organic chemicals, n.e.c. (SIC 2818)	Industrial inorganic chemicals, n.e.c. (SIC 2819)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, "Explanation of Terms."

(D) Withheld to avoid disclosing figures for individual companies.

[1] The proportion of product shipments (both primary and secondary) of the industry represented by primary products.

[2] The proportion of primary products shipped by the establishments classified in the industry to total shipments of such products by all manufacturing establishments.

[3] Government-owned, privately operated establishments did not enter into the calculation of "Primary product specialization ratio" or "Coverage ratio" as all dollar receipts for these establishments were included in "Miscellaneous receipts."

TABLE 4. General Statistics, by Employment Size of Establishment: 1967

ESTABS. COVERED BY ADMIN. RECORDS[1e]	104	.2	1.1	.2	.2	.6	4.4	3.9	8.3	.5	.9

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms, for discussions of items.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e]Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees.)

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

[2]Includes an unspecified amount for plants under construction but not in operation.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Ind. code	Industry and census year	Value of shipments: Total (million dollars)	Value of shipments: Primary products (million dollars)	Value of shipments: Secondary products (million dollars)	Value of shipments: Miscellaneous receipts (million dollars)	Value of shipments: Primary product specialization ratio Col. B / Col. B+C (percent)	Value of primary product shipments: Total, made in all industries (million dollars)	Value of primary product shipments: Made in this industry (million dollars)	Value of primary product shipments: Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]Government-owned, privately operated establishments did not enter into the calculation of "Primary product specialization ratio" or "Coverage ratio" as all dollar receipts for these establishments were included in "Miscellaneous receipts."

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Product code	Class of products, industry, and miscellaneous receipts	All industries	Alkalies and chlorine (SIC 2812)	Industrial gases (SIC 2813)	Cyclic intermediates and crudes (SIC 2815)	Inorganic pigments (SIC 2816)	Industrial organic chemicals n.e.c. 28199 98	All other inorganic chemicals, n.e.c.[40 42 43 44 47 50]	(X)	(X)	162.8	(X)	(X)	(X)	(X)	95.8	(X)	(X)
28199 00	Industrial inorganic chemicals, n.s.k., reported in the census of manufactures. (For companies with 10 or more employees. See Note.)	(X)	(X)	30.6	(X)	(X)	(X)	(X)	11.1	(X)	(X)
28190 02	Industrial inorganic chemicals, n.s.k., reported in the census of manufactures. (For companies with less than 10 employees. See Note.)	(X)	(X)	8.3	(X)	(X)	(X)	(X)	(X)	(X)	(X)

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

Footnotes for Table 6A--28A--Continued

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. (Z) Less than 0.1 when rounded.

[1]Includes quantities liquefied for use, storage, or shipment.

[2]Ammonia soda and caustic carbonation processes.

[3]Includes quantities used to manufacture caustic soda, finished sodium bicarbonate, finished light and dense soda ash, calcium carbonate, etc.

[4]Quantity figures reported in terms of soda ash processed to refined bicarbonate.

[5]Excludes quantities converted to finished dense soda ash.

[6]Includes quantities later evaporated to solid caustic and reported as such.

[7]Includes some liquid shipped as interplant transfers to other establishments for further processing to dry forms.

[8]Includes unspecified amounts produced from liquid caustic received from other establishments.

[9]Includes potassium carbonate, modified sodas, electrolytic soda ash, sodium carbonate (monohydrate) and sal soda and excludes products classified as alkaline detergents.

[10]Excludes value for helium produced in government owned plants.

[11]Excludes information from railroad shops, shipyards, welding shops, and small establishments using portable generators.

[12]Excludes production of liquid and gas carbon dioxide converted to and reported as dry ice and also amounts converted from pure carbon dioxide (liquid or solid) purchased or received from other plants. Also excludes quantities produced and consumed in plants manufacturing soda ash or urea, and quantities produced and transferred to other plants where it is further processed.

[13]Source: U.S. Department of Interior, Bureau of Mines.

[14]Excludes amounts vented, used as fuel, etc., and amounts produced and consumed in the manufacture of synthetic ammonia and methanol, but includes an unspecified amount produced for sale or interplant transfer to plants consuming this gas in the production of ammonia. Also excludes amounts produced by the ammonia dissociation process (cracking of ammonia). Includes amounts of hydrogen produced by some, but not all, petroleum refineries producing hydrogen from catalytic reforming operations.

[15]Excludes amounts produced and consumed in the manufacture of synthetic ammonia or ammonia derivatives.

[16]Excludes amounts produced and used in the manufacture of ammonia.

[17]Code 2813457 combined with 2813498.

[18]Excludes hydrocarbon gases such as propane, butane, and propylene, or halogenated hydrocarbons and cyclopropane, which are reported to the U.S. Tariff Commission. Also excludes sulfur dioxide and chlorine, figures for which are shown in Current Industrial Reports Series M28A(67)-13, Inorganic Chemicals and Gases.

[19]Data for quantities produced and values shipped for many of the synthetic organic chemicals included in this grouping are shown in the United States Tariff Commission's Annual Report "Synthetic Organic Chemicals, United States Production and Sales."

[20]Represents values reported by tar distillers and excludes shipment values for tar, tar crudes, and for pitches reported by establishments classified in industry 3312, Blast Furnaces and Steel Mills, and industry 2911, Petroleum Refining.

[21]Source of data: Current Industrial Reports Series M28A, Inorganic Chemicals and Gases, 1967. The 1963 data include all revised figures published in the Current Industrial Reports Series.

[22]Code 28163 88 included in 28163 98 for 1967.

[23]For quantity information refer to the United States Treasury Department, Internal Revenue Service Publication: Alcohol and Tobacco - 1967. Excludes shipments reported as rubbing alcohol (primary to Industry 2834, Pharmaceutical Preparations), and as antifreeze (primary to Industry 2899, Chemical Preparations, N.E.C.).

[24]Includes value of inorganic chemicals shipped by establishments classified in "manufacturing" and "nonmanufacturing" industries. The value of shipments reported by "nonmanufacturing" establishments classified in the mineral industries and the Tennessee Valley Authority for total Industrial Inorganic Chemicals, n.e.c., code 2819--amounted to $139,673 thousand for 1967 and $161,157 for 1963.

[25]Excludes data for byproduct ammonia liquor and ammonium sulfate published by the Bureau of Mines. The quantities of byproduct ammonia liquor (NH_3 content) produced were 14,471 short tons in 1967 and 14,524 short tons in 1963. The quantities of byproduct ammonium sulfate produced were 745,000 short tons in 1967 and 620,821 short tons in 1963.

[26]Codes 2819141 and 2819143 combined with code 2819159.

[27]Represents total amount of original solution produced, including amounts used for fertilizer, explosive, and other uses and amounts consumed in manufacturing other products such as nitrogen solutions (product code 2819155).

[28]Excludes amounts converted to solid ammonium nitrate.

[29]Codes 2819243 and 2819253 combined with codes 2819231 and 2819263 for 1963.

[30]Represents complete coverage of all manufacturers by the inclusion of estimates which account for less than 5 percent of the total.

[31]Includes anhydrous hydrochloric acid shipments of 171,433 short tons, valued at $8,211 thousand for 1967 and 117,450 short tons, valued at $7,345 thousand for 1963. The quantities of anhydrous hydrochloric acid produced amounted to 628,502 short tons in 1967 and 282,693 short tons, in 1963.

[32]Code 2819451 and code 2819467 combined with code 2819498.

[33]In addition 4,732 short tons in 1967 and 3,327 short tons in 1963 were produced by municipalities.

[34]Code 2819724 combined with code 2819787 for 1963.

[35]Represents quantities produced only for sale or interplant transfer.

[36]Code 2819739 combined with code 2819787 for 1963.

[37]Excludes quantities consumed in the manufacture of meta-, ortho-, and sesquisilicates. Shipments figures include unspecified amounts shipped to other plants for use in manufacturing meta-, ortho-, or sesquisilicates.

[38]Excludes amounts converted to concentrated sodium sulfide.

[39]Excludes pigment grades.

[40]Code 2819909 combined with code 2819998 for 1967.

[41]Excludes quantities of liquid used to produce solid calcium chloride.

[42]Value of activated carbon, deodorizing grade, and solvent recovery and gas absorption grade included in code 2819998.

[43]Codes 2819938 and 2819964 combined with code 2819998 for 1967.

[44]Codes 2819945 and 2819947 combined with code 2819998 for 1963.

[45]Includes unspecified amounts produced and shipped on contract basis.

[46]Collected by Bureau of Mines in 1967.

[47]Code 2819977 combined with code 2819998 for 1967.

[48]Code 2819984 combined with code 2819988 for 1967.

[49]Based on data published in Current Industrial Reports Series MA-38Q(67)-1, "Selected Atomic Energy Products."

[50]Codes 2819993 and 2819995 combined with code 2819998 for 1963.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments	
	1967	1963
CHLORINE, COMPRESSED OR LIQUEFIED (28121)		
United States	190.8	164.0
Northeast Region	12.9	12.5

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

TABLE 6C. Product Classes–Quantity and Value Shipped by All Manufacturing Establishments: 1947, 1954, 1958, 1963 to 1967

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses in the value of shipments columns either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data.

[2]Data for product class 28184 not reported separately in 1947 but included in totals for product classes 28181 and 28182.

[3]Data for "other bulk agents" not reported separately in 1947 but included in totals for "bulk surface agents, except sulfonated oils and fats", classified as a product primary to industry 2842.

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963

(See Appendix, Explanation of Terms)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands rather than rounding in computer operations.

Standard notes: -Represents zero. (X) Not applicable. (NA) Not available. n.e.c. Not elsewhere classified. n.s.k. Not specified by kind. (Z) Under $50 thousand. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards.

[1]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967, this includes estimates for companies that were not mailed report forms.

[2]Code 281552 combined with code 970099 for 1967.

[3]Code 281228 combined with code 970099 for 1967.

[4]Excludes quantities of sulfur derived from other sources such as copper pyrites, hydrogen sulfide and smelter gas.

	Cost.....	Million dollars.	50.8	51.5	20.9	6.3	83.1	218.3
	Quantity of electric energy generated less quantity sold.....	Million kw.-hrs.	3,021.0	274.0	168.9	192.0	11,385.6	2,693.4
	Total energy used for heat and power[1].....	Million kw.-hrs. equivalent.....	58,280.6	17,821.3	30,206.0	13,019.9	247,468.2	177,257.1

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) The standard error of the estimate is greater than zero but less than 1 percent.

[1]Represents the quantity of purchased electric energy and the kilowatt hours equivalent of all fuels used for heat and power.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization–the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization–the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees: Number (1,000)	All employees: Payroll (million dollars)	Production workers: Number (1,000)	Production workers: Man-hours (millions)	Production workers: Wages (million dollars)	Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms, for discussions of items.
Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

PLASTICS MATERIALS, SYNTHETIC RUBBER, AND MANMADE FIBERS

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2821--Plastics Materials, Synthetic Resins, and Nonvulcanizable Elastomers
2822--Synthetic Rubber (Vulcanizable Elastomers)
2823--Cellulosic Manmade Fibers
2824--Synthetic Organic Fibers, Except Cellulosic

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

2821--PLASTICS MATERIALS, SYNTHETIC RESINS, AND NONVULCANIZABLE ELASTOMERS

This industry comprises establishments primarily engaged in manufacturing synthetic resins, plastics materials, and nonvulcanizable elastomers. Important products of this industry include: cellulose plastics materials; phenolic and other tar acid resins; urea and melamine resins; vinyl resins; styrene resins; alkyd resins; acrylic resins; polyethylene resins; polypropylene resins; rosin modified resins; coumarone-indene and petroleum polymer resins; and miscellaneous resins including polyamide resins, silicones, polyisobutylenes, polyesters, polycarbonate resins, acetal resins, and fluoro-hydrocarbon resins; vulcanized fiber; casein plastics; and regenerated cellulose. This classification does not include nonchemical manufacturers who merely purchase resin or plastics materials to produce fabricated plastics products, film, and sheets, which are classified in industry 3079. For a detailed list of products of industry 2821, refer to table 6A, product codes 2821111 to 2821998.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Plastics Materials and Resins Industry in 1967 totaled $3,473.9 million. This included shipments of plastics materials and resins (primary products), valued at $2,827.1 million, shipments of other products (secondary products) valued at $577.0 million, and miscellaneous receipts of $69.9 million.

This industry's shipments of plastics materials and resins (primary products) in 1967 represented 83 percent (specialization ratio) of its total product shipments (primary

and secondary). The industry specialization ratio in 1963 was 84 percent. Secondary products shipped by this industry in 1967 consisted mainly of industrial organic chemicals, n.e.c. ($169.6 million), and miscellaneous plastics products ($127.2 million).

Industry 2821 shipments of plastics materials and resins (primary products) in 1967 represented 60 percent (coverage ratio) of these products valued at $4,703.1 million shipped by all industries. In 1963, the coverage ratio was 64 percent. Other industries shipping plastics materials and resins (primary products) consisted mainly of industry 3079, Miscellaneous Plastics Products, N.E.C.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2821, these establishments accounted for approximately 0.3 percent of payroll and 0.3 percent of value added by manufacture.

2822--SYNTHETIC RUBBER (VULCANIZABLE ELASTOMERS)

This industry comprises establishments primarily engaged in the manufacture of synthetic rubber by polymerization or copolymerization. For products of industry 2822, refer to table 6A, product code 2822000.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Synthetic Rubber Industry in 1967 totaled $926.9 million. This included shipments of synthetic rubber (primary products), valued at $814.4 million, shipments of other products (secondary products) valued at $97.4 million, and miscellaneous receipts of $15.2 million.

This industry's shipments of synthetic rubber (primary products) in 1967 represented 89 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 92 percent. Secondary products shipped by this industry in 1967 consisted mainly of industrial organic chemicals, n.e.c. ($62.4 million).

Industry 2822 shipments of synthetic rubber (primary products) in 1967 represented 81 percent (coverage ratio) of these products valued at $1,004.9 million shipped by all industries. In 1963, the coverage ratio was 80 percent. Other industries shipping synthetic rubber (primary products) consisted mainly of industry 2821, Plastics Materials and Resins, and industry 2818, Industrial Organic Chemicals, N.E.C.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2822, these establishments accounted for approximately 0 percent of payroll and 0 percent of value added by manufacture.

2823--CELLULOSIC MANMADE FIBERS

This industry comprises establishments primarily engaged in manufacturing cellulosic fibers (including cellulose acetate and regenerated cellulose such as rayon by the viscose or cuprammonium process) in the form of monofilament, yarn, staple or tow suitable for further manufacturing on spindles, looms, knitting machines or other textile processing equipment. Establishments primarily engaged in manufacturing textile glass fibers are classified in industry 3229. For a detailed list of products of industry 2823, refer to table 6A, product codes 2823111 to 2823298.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Cellulosic Manmade Fibers Industry in 1967 totaled $902.8 million.

Secondary products shipped by this industry in 1967 consisted mainly of organic fibers, noncellulosic, and plastics materials and resins.

Other industries shipping cellulosic manmade fibers (primary products) consisted mainly of industry 2824, Organic Fibers, Noncellulosic.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2823, these establishments accounted for approximately 0 percent of payroll and 0 percent of value added by manufacture.

2824--SYNTHETIC ORGANIC FIBERS, EXCEPT CELLULOSIC

This industry comprises establishments primarily engaged in manufacturing synthetic organic fibers except cellulosic (including those of regenerated proteins, and of polymers or copolymers of such components as vinyl chloride, vinylidene chloride, linear esters, vinyl alcohols, acrylonitrile, ethylenes, amides, and related polymeric materials) in the form of monofilament, yarn, staple or tow suitable for further manufacturing on spindles, looms, knitting machines or other textile processing equipment. Establishments primarily engaged in manufacturing textile glass fibers are classified in industry 3229. For a detailed list of products of industry 2824, refer to table 6A, product codes 2824115 to 2824286.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Organic Fibers, Noncellulosic Industry in 1967 totaled $2,033.2 million. This included shipments of organic fibers noncellulosic (primary products), valued at $1,863.9 million, shipments of other products (secondary products) valued at $159.9 million, and miscellaneous receipts of $9.4 million.

This industry's shipments of organic fibers, noncellulosic (primary products) in 1967 represented 92 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 95 percent. Secondary products shipped by this industry in 1967 consisted mainly of cellulosic manmade fibers.

Industry 2824 shipments of organic fibers, noncellulosic (primary products) in 1967 represented 94 percent (coverage ratio) of these products valued at $1,974.1 million shipped by all industries. In 1963, the coverage ratio was 97 percent. Other industries shipping organic fibers, noncellulosic (primary products) consisted mainly of industry 2823, Cellulosic Manmade Fibers.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2824, these establishments accounted for approximately 0 percent of payroll and 0 percent of value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	End-of-year inventories	Specialization ratio	Coverage ratio
	Total (number)	With 20 employees or more (number)	Number (1,000)	Payroll (million dollars)	Number (1,000)	Man-hours (millions)	Wages (million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(percent)	(percent)

Note: In 1967, 1963, and 1958, the number of companies in industry 2821 was 508, 391, and 279, respectively; in industry 2822: 33, 16, and 13; industry 2823: 13, 8, and 10; and industry 2824: 22, 14, and 9. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Production workers as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e]Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

[2]Includes an unspecified amount for plants under construction but not in operation.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Ind. code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. B+C (percent)	Total, made in all industries (million dollars)	Made in this industry (million dollars)	Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)
		A	B	C	D	E	F	G	H	I
2821	Plastics materials and Resins.....1967..	3,473.9	2,827.1	577.0	69.9	83	4,703.1	2,827.1	1,876.0	60
	1963..	2,571.5	2,114.9	389.8	66.8	84	3,301.4	2,114.9	1,186.4	64
2822	Synthetic rubber.....1967..	926.9	814.4	97.4	15.2	89	1,004.9	814.4	190.5	81

	1963..	1,403.2	1,322.4	70.2	10.5	95	1,368.3	1,322.4	45.9	97

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Product code	Class of products, industry, and miscellaneous receipts	All industries	Plastics materials and synthetics (SIC 2821)	Synthetic rubber (SIC 2822)	Miscellaneous plastics products (SIC 3079)	Other industries
	Total shipments and miscellaneous receipts	(X)	3,473.9	926.9	(X)	(X)
2821-	Plastics materials and resins	4,703.1	[1]2,827.1	(5-10)	(500-1000)	1,037.8
28211 30791	Unsupported plastics film, sheets, rods, tubes	1,225.4	[1]190.1	-	792.4	[2]243.0
28212	Regenerated cellulosic products, except rayon	326.9	234.0	-	(10-20)	(50-100)
28213	Thermoplastic resins (excluding resins for protective coatings)	1,924.8	1,391.0	(5-10)	(under 2)	(500-1000)
28214	Thermosetting resins (excluding resins for protective coatings)	544.8	450.8	(Z)	(under 2)	(50-100)
28215	Synthetic resin adhesives, from resins manufactured in same establishment	51.6	51.2	-	(under 2)	(under 2)
28216	Synthetic resins for protective coatings	286.6	223.4	-	2.2	60.9
28217	Custom compounded purchased resins	236.0	191.3	(under 2)	(10-20)	26.6
28219	Plastics and resin materials, n.e.c	67.5	56.9	(Z)	2.5	8.1
28210	Plastics and resin materials, n.s.k	39.4	38.3	-	(under 2)	(under 2)
2822-	Synthetic rubber	1,004.9	(20-50)	814.4	-	(100-250)
	Other product shipments by 4-digit product group	(X)	[1]577.0	97.4	(X)	(X)
2298-	Cordage and twine	(X)	(over 2)	-	(X)	(X)
2621-	Papermill products, except building paper	(X)	(2-5)	-	(X)	(X)
2649-	Converted paper products, n.e.c	(X)	(over 2)	-	(X)	(X)
2813-	Industrial gases	(X)	(over 2)	-	(X)	(X)

	Other	(X)	4.1		(X)	(X)
	Listing of the other industries with over $2 million shipments of the primary products					
2821-	2641- Paper coating and glazing	(X)	(X)	(X)	(X)	(2-5)
2821-	2812- Alkalies and chlorine	(X)	(X)	(X)	(X)	(20-50)
2821-	2815- Cyclic intermediates and crudes	(X)	(X)	(X)	(X)	52.7
2821-	2816- Inorganic pigments	(X)	(X)	(X)	(X)	(5-10)
2821-	2819- Industrial inorganic chemicals, n.e.c	(X)	(X)	(X)	(X)	15.8
2821-	2823- Cellulosic manmade fibers	(X)	(X)	(X)	(X)	(50-100)
2821-	2824- Organic fibers, noncellulosic	(X)	(X)	(X)	(X)	20.8
2821-	2843- Surface active agents	(X)	(X)	(X)	(X)	8.1
2821-	2851- Paints and allied products	(X)	(X)	(X)	(X)	35.5
2821-	2861- Gum and wood chemicals	(X)	(X)	(X)	(X)	8.8
2821-	2891- Adhesives and gelatin	(X)	(X)	(X)	(X)	18.7
2821-	2899- Chemical preparations, n.e.c	(X)	(X)	(X)	(X)	15.2
2821-	2911- Petroleum refining	(X)	(X)	(X)	(X)	53.7
2821-	3011- Tires and inner tubes	(X)	(X)	(X)	(X)	(over 2)
2821-	3069- Fabricated rubber products, n.e.c	(X)	(X)	(X)	(X)	15.2
2821-	3079- Miscellaneous plastics products	(X)	(X)	(X)	(X)	40.5
2821-	3949- Sporting and athletic goods, n.e.c	(X)	(X)	(X)	(X)	(2-5)
2822-	2815- Cyclic intermediates and crudes	(X)	(X)	(X)	(X)	(2-5)
2822-	2818- Industrial organic chemicals, n.e.c	(X)	(X)	(X)	(X)	(50-100)
2822-	2819- Industrial inorganic chemicals, n.e.c	(X)	(X)	(X)	(X)	(over 2)
2822-	2833- Medicinals and botanicals	(X)	(X)	(X)	(X)	(over 2)
2822-	2911- Petroleum refining	(X)	(X)	(X)	(X)	(over 2)

See footnotes at end of table.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967—Continued

Product code	Class of products, industry, and miscellaneous receipts	All industries	Cellulosic manmade fibers (SIC 2823)	Organic fibers noncellulosic (SIC 2824)	Other industries
	Total shipments and misc. receipts	(X)	902.8	2,033.2	(X)
2823-	Cellulosic manmade fibers	681.1	(500-1000)	(50-100)	(under 2)
28231	Acetate yarn	339.7	(250-500)	(20-50)	-
28232	Rayon yarn, viscose and cuprammonium processes	340.5	(250-500)	(20-50)	(under 2)
28230	Cellulosic manmade fibers, n.s.k.	0.9	(under 2)	-	(under 2)
2824-	Organic fibers, noncellulosic	1,974.1	(50-100)	1,863.9	(10-20)
28241	Polyamide fibers, nylon, except monofilaments	1,068.4	(10-20)	(1000-2500)	(over 2)
28242	Other noncellulosic synthetic organic fibers	905.3	(50-100)	(500-1000)	(5-10)
28240	Organic fibers, noncellulosic, n.s.k.	0.4	(under 2)	-	(under 2)
	Other product shipments by 4-digit product group	(X)	(250-500)	159.9	(X)
2295-	Coated fabrics, not rubberized	(X)	-	(over 2)	(X)
2296-	Tire cord and fabric	(X)	(20-50)	-	(X)
2818-	Industrial organic chemicals, n.e.c.	(X)	(50-100)	(20-50)	(X)
2819-	Industrial inorganic chemicals, n.e.c.	(X)	8.1	(10-20)	(X)
2821-	Plastics materials and resins	(X)	(50-100)	20.8	(X)
2843-	Surface active agents	(X)	(over 2)	-	(X)
3079-	Miscellaneous plastics products	(X)	-	(10-20)	(X)
	Miscellaneous receipts	(X)	3.3	9.4	(X)
	Resales	(X)	3.1	5.9	(X)
	Other	(X)	0.2	3.5	(X)
	Listing of the other industries with over $2 million shipments of the primary products				
2824-	2282- Throwing and winding mills	(X)	(X)	(X)	(over 2)
2824-	2821- Plastics materials and resins	(X)	(X)	(X)	(2-5)

Note: Data shown parenthetically above are expressed in millions of dollars.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than 0.1 when rounded.

[1]Product class code 28211 includes film, sheets, sheeting, rods, tubes, and other stock shapes made from purchased resins valued at $85.1 million, which are not considered primary to this industry and, therefore, are excluded from the total for "Primary products" and included in the total for "Other products."

[2]Includes value of $85.1 million for film, sheets, sheeting, rods, tubes, and other stock shapes made form purchased resins, not considered primary to industry 2821 but manufactured by plants classified in that industry.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Total value of shipments including interplant, transfers (million dollars) 1967	1963
2821- -- 30791 --	PLASTICS MATERIALS, SYNTHETIC RESINS, AND NONVULCANIZED ELASTOMERS, TOTAL	4,703.1	3,301.4
	Unsupported plastics film, sheets, sheeting, rods, tubes, and other stock shapes:		
	As reported in the census of manufactures	1,225.4	688.1
28211 --	Made from resins produced in same establishment	215.7	166.7
30791 --	Made from purchased resins	1,009.8	521.4
	As reported in Current Industrial Report MA30D[1]	1,030.0	672.0
28211 --	Made from resins produced in same establishment	178.4	166.7
30791 --	Made from purchased resins	851.6	505.8
	Unsupported film, sheets, and sheeting, total[1]	889.5	580.6
	Cellulosic, total	69.6	56.8
30791 10 30791 11 28211 11	Less than 3.0 mils and not specified by gauge	16.1	34.3
30791 13	3.0 mils to 9.9 mils	28.4	11.1
30791 15 28211 15	10.0 mils and over	25.0	11.3
	Polyethylene, total	258.1	167.7
30791 21 28211 21	Less than 3.0 mils	188.1	126.2
30791 23 28211 23	3.0 mils to 9.9 mils	55.4	30.8
30791 25 28211 25	10.0 mils and over	5.3	4.3
30791 20	Not specified by gauge	9.4	6.4
	Polypropylene, total	28.5	15.8
30791 31 28211 31	Less than 3.0 mils	22.9	14.7
30791 33-35	3.0 mils and over	5.6	1.2
	Polystyrene, total	32.3	18.5
30791 41 28211 41	Less than 3.0 mils	11.5	7.1
30791 43	3.0 mils to 9.9 mils		
30791 45 28211 45	10.0 mils and over	20.7	11.4
30791 51 30791 55	Styrene copolymer, all gauges	2.1	2.7
	Vinyl and vinyl copolymer, total	280.1	183.6
30791 61 28211 61	Less than 3.0 mils and not specified by gauge	[2]81.3	39.1
30791 63	3.0 mils to 9.9 mils	72.2	44.8
28211 63		13.5	9.6
30791 65	10.0 mils and over	113.1	67.3
28211 65			7.0
30791 60 28211 60	Not specified by gauge	([2])	15.7
	Other unsupported plastic film, sheets, and sheeting, all gauges, total	218.7	135.6
30791 71 28211 71	Less than 3.0 mils	96.1	(NA)
30791 73 28211 73	3.0 mils to 9.9 mils	24.8	(NA)
30791 75 28211 75	10 mils and over	97.9	(NA)
	Unsupported plastics rods, tubes, and other stock shapes (excluding foam), total[1]	138.7	76.6
30791 81	Acrylate and methacrylate	6.7	3.5
30791 83 28211 83	Cellulosics	18.1	9.8
30791 85	Polyamide (nylon)	8.0	4.9
30791 87	Polyethylene	6.1	7.1
30791 89	Polypropylene	17.5	3.2
30791 91	Polystrene	6.5	6.3
30791 93	Styrene copolymer	1.3	1.4
30791 95 28211 95	Vinyl and vinyl copolymer	35.7	19.2
30791 97	Other unsupported plastics rods, tubes, and other stock shapes	38.8	21.2
30791 00 28211 00	Unsupported plastics film, sheets, sheeting, rods, tubes, and other stock shapes, n.s.k.[1]	1.9	14.7

See footnotes at end of table.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

Product code	Product	1967			1963		
		Production for all purposes (million lbs.)	Total shipments, including interplant transfers: Quantity (million lbs.)	Total shipments, including interplant transfers: Value (million dollars)	Production for all purposes (million lbs.)	Total shipments, including interplant transfers: Quantity (million lbs.)	Total shipments, including interplant transfers: Value (million dollars)
2821- -- 30791 --	PLASTICS MATERIALS, SYNTHETIC RESINS, AND NONVULCANIZED ELASTOMERS--Continued						
28212	Regenerated cellulosic products, except rayon	(X)	(X)	326.9	(X)	(X)	327.6
	Sheets and rolls (cellophane):						
28212 13	Uncoated and nitrocellulose coated	392.9	382.8	224.7	427.1	422.5	249.8
28212 15	Polymer coated						
28212 51	Sponges				11.9	12.0	14.2
28212 31	Caps and bands	(S)	(S)	102.2	(S)	(S)	63.6
28212 98	Other regenerated cellulosic products						
28212 00	Regenerated cellulosic products, except rayon, n.s.k.						
28213 --	Thermoplastic resins, excluding resins for protective coatings	(X)	(X)	1,924.8	(X)	(X)	1,311.5
	Polyethylene resins:[3]						
28213 21	Low and medium density (0.940 and under)	2,412.1	2,409.0	352.2	1,783.5	1,785.9	325.3
28213 31	High density (over 0.940)	1,426.3	1,271.0	204.9	505.6	483.6	112.1
28213 51	Polypropylene resins[3]	599.4	608.5	117.7	202.0	181.3	48.2
28213 55	Other olefin polymers and copolymers[3]	114.2	101.7	24.1	-	-	-
	Styrene resins:[3]						
28213 61	Polystyrene, including rubber modified	1,586.7	1,411.0	234.9	1,094.9	975.0	188.5
28213 63	Styrene-acrylonitrile	52.4	50.6	12.1	39.8	32.2	6.5
28213 65	Acrylonitrile-butadiene-styrene	341.0	329.4	107.4	(4)	(4)	(4)
28213 67	Other styrene copolymers, containing 50 percent or more styrene	106.0	105.3	26.5	83.0	83.7	22.5
28213 69	All other styrene and styrene derivative polymers and copolymers, including styrene-divinyl benzene	131.7	119.1	36.7	[4]216.3	[4]197.3	[4]78.1
	Vinyl resins:[3]						
28213 71	Polyvinyl chloride and copolymers, containing 50 percent or more polyvinyl chloride	2,587.7	2,334.5	357.4	1,103.1	1,063.6	202.3
28213 73	Polyvinyl acetate	336.5	322.1	70.2	179.5	170.1	37.9
28213 75	All other vinyl and vinyl copolymer resins	246.2	194.3	68.1	137.6	128.7	69.4
28213 81	Acrylic resins[3]	197.6	198.0	75.4	(5)	(5)	(5)
28213 83	Fluorocarbon[3]	6.6	6.2	20.6	(5)	(5)	(5)
28213 85	Polyamide (nylon) resins[3]	99.5	90.5	68.8	58.8	50.6	45.3
28213 89	Other thermoplastic resins and materials such as cellulosics acetal, polycarbonate, polyterpene etc.[3]	355.1	328.0	146.3	[5]244.9	[5]244.4	[5]174.4
28213 00	Thermoplastic resins and plastics materials, excluding resins and plastics for protective coatings, n.s.k.	(S)	(S)	1.6	(S)	(S)	1.1
28214 --	Thermosetting resins, excluding resins for protective coatings, total	(X)	(X)	544.8	(X)	(X)	420.0
28214 11	Melamine-formaldehyde resins[3]	126.6	128.3	50.4	128.0	118.2	48.2
28214 21	Phenolic and other tar-acid resins[3]	679.7	622.1	131.2	593.9	579.8	148.2
28214 31	Polyester resins[3]	376.1	359.9	111.6	263.3	244.0	77.5
28214 41	Urea-formaldehyde resins[3]	473.5	455.2	75.6	312.0	296.4	54.0

28242 --	Other noncellulosic synthetic organic fibers	1,246.4	1,223.6	905.3	474.2	454.3	472.2
28242 45	Acrylic and modacrylic yarns, staple and tow	399.8	389.5	287.2	211.7	213.1	181.6
28242 63	Polypropylene filament yarn and textile monofilaments	54.8	55.6	42.6	26.4	19.9	14.7
28242 65	Polypropylene staple and tow	47.1	41.9	29.3			
28242 51-55	Polyester filament yarn, staple, tow and fiberfill	712.8	695.5	494.6			
28242 61	Polyethylene fibers						
28242 73	Saran fibers						
28242 75	Spandex (extruded textile fiber)	31.9	41.1	51.6	231.4	220.6	275.9
28242 78	Vinyon fibers						
28242 81-85	Other manmade fibers, filament yarn and textile monofilaments, staple and tow						
28242 86-88	Salable waste of noncellulosic fibers except nylon						
28240 00	Organic fibers, noncellulosic, n.s.k. (For companies with 10 or more employees. See Note.)	(X)	(X)	0.4	(X)	(X)	-
28240 02	Organic fibers, noncellulosic, n.s.k.(For companies with less than 10 employees. See Note.)	(X)	(X)	-	(X)	(X)	-

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 19 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely indentified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases in the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of consistency review. (Z) Less than $50 thousand.

[1]Data reported in Current Industrial Reports Series MA30D, Shipments of Selected Plastics Products. The 1963 data reflect changes published since the publication of the 1963 Census of Manufactures Volume II.

[2]Codes 3079160 - 2821160 included in 3079161 - 2821161.

[3]Quantities of resin produced and shipped were requested on a " resin content" basis for vinyl resins, and on a "dry" basis for all other resins.

[4]Code 2821365 included in code 2821369 in 1963.

[5]Codes 2821381 and 2821383 included in code 2821389 in 1963.

[6]Code 2821473 included in code 2821498 in 1963.

[7]Code 2821479 included in code 2821498 in 1967.

[8]Code 2821521 included in code 2821598 in 1967.

[9]Code 2821911 included in code 2821919 in 1967.

[10]Code 2821931 included in code 2821998 in 1967.

[11]For quantity of production of individual synthetic rubbers, refer to Current Industrial Reports Series M30A, Rubber: Supply and Distribution for the United States, Summary for 1967.

[12]Data for 1967 include the oil content of oil-extended elastomers. Data also include figures for polyurethane elastomers, which are not covered in Current Industrial Reports Series M30A.

[13]Weight does not include acetate and triacetate staple, tow, and salable waste.

[14]Includes value of acetate and triacetate staple, tow, and salable waste.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments	
	1967	1963
UNSUPPORTED PLASTICS FILM, RODS, TUBES, ETC., (30791 and 28211)		
United States	1,225.4	688.1

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $ 50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

TABLE 6C. Product Classes–Quantity and Value Shipped by All Manufacturing Establishments: 1947, 1954, 1958, 1963 to 1967

Code	Product class	1967	1966[1]	1965[1]	1964[1]	1963	1958	1954	1947
2821- and 30791	Plastics materials and resins[2]; Unsupported plastics film, sheet, rods, tubes, from purchased resins	4,703.1	4,809.3	4,166.0	3,588.5	3,301.4	2,202.4	1,463.5	559.6
28211 and 30791	Unsupported plastics film, etc., from resins made in same establishment; Unsupported plastics film, sheet, rods, tubes, from purchased resins	1,225.4	1,107.8	908.9	770.5	688.1	(NA)	(NA)	(NA)
28212	Regenerated cellulosic products, except rayon	326.9	329.7	330.4	336.4	327.6	302.0	217.0	(NA)
28213	Thermoplastic resins except for protective coatings	1,924.8	2,057.9	1,747.1	1,421.9	1,311.5	(NA)	(NA)	(NA)
28214	Thermosetting resins except for protective coatings	544.8	525.2	466.0	457.6	420.0	(NA)	(NA)	(NA)
28215	Synthetic resin adhesives from resins manufactured in same establishment	51.6	45.0	33.3	28.2	28.3	(NA)	(NA)	(NA)
28216	Synthetic resins for protective coatings	286.6	351.2	316.9	298.9	272.2	(NA)	(NA)	(NA)
28217	Custom compounded purchased resins	236.0	321.1	290.2	197.4	184.6	(NA)	(NA)	(NA)
28219	Plastics and resins materials, n.e.c.	67.5	60.5	60.3	67.4	60.4	(NA)	(NA)	(NA)
28210	Plastics materials, synthetic resins, and non-vulcanizable elastomers, n.s.k.	39.4	(10.7)	(13.0)	10.1	8.7	1.4	0.7	(NA)
28220	Synthetic rubber (vulcanizable elastomers.)	1,004.9	1,038.1	949.9	919.9	862.3	603.9	392.2	253.0
2823-	Cellulosic manmade fibers	681.1	720.8	741.3	711.1	648.9	582.9	640.7	585.8
28231	Acetate yarn	339.7	312.8	316.6	303.9	250.3	210.7	196.0	199.7
28232	Rayon yarn, viscose and cuprammonium processes	340.5	408.0	424.8	407.2	398.6	372.3	444.8	386.1
28230	Cellulosic manmade fibers, n.s.k.	0.9	-	-	-	-	-	-	-
2824-	Organic fibers, noncellulosic	1,974.1	1,938.5	1,832.5	1,573.2	1,368.3	748.3	561.6	91.9
28241	Polyamide fibers, nylon, except nontextile monofilaments	1,068.4	1,114.6	1,079.4	994.0	896.1	(NA)	(NA)	(NA)
28242	Other noncellulosic synthetic organic fibers	905.3	823.9	753.1	579.2	472.2	(NA)	(NA)	(NA)
28240	Organic fibers, noncellulosic, n.s.k.	0.4	-	-	-	-	-	-	-

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at the individual product level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

[2]Because a major revision in the classification of products assigned to industry 2821, plastic materials, was introduced in 1963, prior data, for the most part, are not comparable at the product class level.

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963

	Quantity	1,000 barrels...	1,469.1	(D)	(D)	426.4
	Cost	Million dollars.	3.3	(D)	(D)	1.1
131300	Gas (natual, manufactured mixed, blast furnace, coke-oven, and other gas):					
	Quantity	Million cu. ft..	33,848.9	36,251.1	9,702.4	25,865.8
	Cost	Million dollars.	11.3	9.1	3.3	8.4
960013	Other fuels (gasoline, LPG, wood, etc.)	...do	2.8	2.4	(Z)	1.0
	Fuels, n.s.k	...do	3.1	0.6	-	0.1
	Purchased electric energy:					
	Quantity	Million kw.-hrs.	4,367.6	1,570.4	472.7	2,539.2
	Cost	Million dollars.	34.6	10.8	3.7	16.2
	Quantity of electric energy generated less quantity sold	Million kw.-hrs.	442.3	-	1,713.7	1,002.4
	Total energy used for heat and power[1]	Million kw.hrs. equivalent	34,682.8	15,832.0	30,667.9	26,722.7

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Under $50 thousand.

[1] Represents the quantity of purchased electric energy and the kilowatt hours equivalent of all fuels used for heat and power.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees: Number (1,000)	All employees: Payroll (million dollars)	Production workers: Number (1,000)	Production workers: Man-hours (millions)	Production workers: Wages (million dollars)	Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

DRUGS

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2831--Biological Products
2833--Medicinal Chemicals and Botonical Products
2834--Pharmaceutical Preparations

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

2831--BIOLOGICAL PRODUCTS

This industry comprises establishments primarily engaged in the production of bacterial and virus vaccine, toxoids and analogous products (such as allergenic extracts), serums, plasmas, and other blood derivatives for human or veterinary use. For a detailed list of products of industry 2831, refer to table 6A, product codes 2831111 to 2831598.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Biological Products Industry in 1967 totaled $160.0 million. This included shipments of biological products (primary products), valued at $134.4 million, shipments of other products (secondary products) valued at $14.6 million, and miscellaneous receipts of $11.1 million.

This industry's shipments of biological products (primary products) in 1967 represented 90 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 88 percent. Secondary products shipped by this industry in 1967 consisted mainly of surgical and medical instruments ($1.4 million).

Industry 2831 shipments of biological products (primary products) in 1967 represented 61 percent (coverage ratio) of these products valued at $220.6 million shipped by all industries. In 1963, the coverage ratio was 45 percent. Other industries shipping biological products (primary products) consisted mainly of industry 2834, Pharmaceutical Preparations.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2831, these establishments accounted for approximately the following percentages 1.0 percent of payroll and 1.0 percent of value added by manufacture.

2833--MEDICINAL CHEMICALS AND BOTANICAL PRODUCTS

This industry comprises establishments primarily engaged in (1) manufacturing bulk organic and inorganic chemicals and their derivatives; and (2) processing (grading, grinding, and milling) bulk botanical drugs and herbs. Establishments primarily engaged in manufacturing agar-agar and similar products of natural origin, endocrine products, manufacturing or isolating basic vitamins, and isolating active medicinal principals such as alkaloids from botanical drugs and herbs are also included in this industry. For a detailed list of products of industry 2833, refer to table 6A, product codes 2833110 to 2833281.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Medicinals and Botanicals Industry in 1967 totaled $445.2 million. This included shipments of medicinals and botanicals (primary products), valued at $329.7 million, shipments of other products (secondary products) valued at $89.6 million, and miscellaneous receipts of $25.9 million.

This industry's shipments of medicinals and botanicals (primary products) in 1967 represented 71 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 71 percent. Secondary products shipped by this industry in 1967 consisted mainly of industrial organic chemicals ($38.9 million).

Industry 2833 shipments of medicinals and botanicals (primary products) in 1967 represented 56 percent (coverage ratio) of these products valued at $593.8 million shipped by all industries. In 1963, the coverage ratio was 47 percent. Other industries shipping medicinals and botanicals (primary products) consisted mainly of industry 2834, Pharmaceutical Preparations, $148.3 million; and industry 2818, Industrial Organic Chemicals, N.E.C., $46.3 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2833, these establishments accounted for approximately the following percentages 0.5 percent of payroll and 0.3 percent of value added by manufacture.

2834--PHARMACEUTICAL PREPARATIONS

This industry comprises establishments primarily engaged in manufacturing, fabricating, or processing drugs in pharmaceutical preparations for human or veterinary use. The greater part of the products of these establishments is finished in the form intended for final consumption such as ampoules, tablets, capsules, ointments, medicinal powders, solutions, and suspensions. Products of this industry consist of two important lines, namely: (1) pharmaceutical preparations promoted primarily to the dental, medical, or veterinary professions; and (2) pharmaceutical preparations promoted primarily to the public. For a detailed list of products of industry 2834, refer to table 6A, product codes 2834111 to 2834998.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Pharmaceutical Preparations Industry in 1967 totaled $4,696.4 million. This included shipments of pharmaceutical preparations (primary products), valued at $3,994.3 million, shipments of other products (secondary products) valued at $601.1 million, and miscellaneous receipts (mainly contract work on materials owned by others) of $101.0 million.

This industry's shipments of pharmaceutical preparations (primary products) in 1967 represented 87 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 87 percent. Secondary products shipped by this industry in 1967 consisted mainly of toilet preparations ($226.7 million), and medicinals and botanicals ($148.3 million).

Industry 2834 shipments of pharmaceutical preparations (primary products) in 1967 represented 97 percent (coverage ratio) of these products valued at $4,139.7 million shipped by all industries. In 1963, the coverage ratio was 94 percent. Other industries shipping pharmaceutical preparations (primary products) consisted mainly of industry 2844, Toilet Preparations, $38.1 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2833, these establishments accounted for approximately the following percentages 0.5 percent of payroll and 0.3 percent of value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	End-of-year inventories	Specialization ratio	Coverage ratio

Note: In 1967, 1963, and 1958, the number of companies in industry 2831 was 119, 102, and 110, respectively; in industry 2833: 112, 122, and 114; industry 2834: 791, 944, and (NA). The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated.

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250 to 499 employees
CC - 500 to 999 employees
EE - 1,000 to 2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

TABLE 3. Detailed Statistics: 1967

Item	Biological products (SIC 2831)	Medicinals and botanicals (SIC 2833)	Pharmaceutical preparations (SIC 2834)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e]Over 30 percent of the data for this line was estimated.

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

[2]Includes an unspecified amount for plants under construction but not in operation.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Ind. code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. B+C (percent)	Total, made in all industries (million dollars)	Made in this industry (million dollars)	Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)
		A	B	C	D	E	F	G	H	I
2831	Biological products.....1967..	160.0	134.4	14.6	11.1	90	220.6	134.4	86.2	61
	1963..	95.7	75.1	10.4	10.2	88	167.3	75.1	92.2	45
2833	Medicinals and botanicals.....1967..	445.2	329.7	89.6	25.9	71	593.8	329.7	264.1	56
	1963..	305.8	203.0	83.1	19.7	71	434.0	203.0	231.0	47
2834	Pharmaceutical preparations.....1967..	4,696.4	3,994.3	601.1	101.0	87	4,139.7	3,994.3	145.4	97
	1963..	3,314.3	2,819.8	410.9	83.6	87	3,000.2	2,819.8	180.4	94

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms, for discussions of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Product code	Class of products and miscellaneous receipts	All industries	Biological products (SIC 2831)	Medicinals and botanicals (SIC 2833)	Pharmaceutical preparations (SIC 2834)	Other industries

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

Footnotes for Table 6A-28C.

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments are included in the code ending with "002" which is further discussed in the text. Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Definitions: Ethical-products primarily advertised or otherwise promoted to or prescribed by the health professions; medical, dental, pharmaceutical, nursing, etc. Proprietary-products primarily advertised or otherwise promoted to the general public.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than $50 thousand. *Ethical, proprietary and export totals for these product groupings are not being published in order to permit the maximum publication of detailed product data.

[1]A revision in the product structure of this industry was introduced in the 1967 Standard Industrial Classification so that the product statistics for the industry prior to 1967 are not directly comparable.

[2]Data on quantities produced and values shipped for many of the synthetic organic medicinal chemicals included in this grouping are shown in the United States Tariff Commission's annual report, "Synthetic Organic Chemicals, United States Production and Sales."

[3]1967 product detail appears in Current Industrial Reports Series M28G, "Pharaceutical Preparations, Except Biologicals." The variations between the two sets of figures are due primarily to the following reasons:

a. Use of different base for reporting value. Product class shipments of pharmaceutical preparations reported in the census of manufactures represent net sales value (total sales dollars, less discounts, allowances, and returns) f.o.b. plant. The value includes a profit (or loss) normally assigned to the manufacturing establishment to cover only those costs attributable to the establishment. For example, sales costs by separately maintained sales organizations are excluded. The data shown in Current Industrial Reports Series M28G, however, include value attributed by sales distribution, advertising, direct promotion, and research whether or not directly attributable to the establishment. In cases where manufacturing, distribution, and sales operations are consolidated for accounting purposes for the establishment, the two values are comparable.

b. Duplication--in order to avoid duplication of shipment figures, preparations shipped in bulk quantities which were repackaged at another location have been omitted from the commodity survey, but the shipments of the repackager have been included. The census figures also include the bulk shipments.

[4]Code 2834121 combined with 2834139 in 1963.

[5]Code 2834211 and code 2834200 combined with 2834298.

[6]Cough drops selling at retail for 10 cents or less per package are coded as primary to industry 2071, "Confectionery Products."

[7]Code 2834941 combined with codes 2834998 and 2834900.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

28344	Pharmaceutical preparations acting on the respi-ratory system for human use	361.4	351.9	325.8	285.2	283.1	(NA)	(NA)	(NA)
28345	Pharmaceutical preparations acting on the digestive or the genito-urinary system for human use	552.1	507.6	487.7	431.7	402.8	(NA)	(NA)	(NA)
28346	Pharmaceutical preparations acting on the skin, for human use	229.1	219.0	198.1	177.9	160.3	(NA)	(NA)	(NA)
28347	Vitamin, nutrient and hematinic preparations for human use	378.4	378.1	346.7	336.6	340.8	(NA)	(NA)	(NA)
28348	Pharmaceutical preparations affecting parasitic and infective diseases, for human use	664.5	719.4	643.0	528.2	520.1	(NA)	(NA)	(NA)
28349	Pharmaceutical preparations for veterinary use	135.4	159.4	140.4	106.7	110.4	87.7	85.8	30.4
28340	Pharmaceutical preparations, n.s.k.	54.1	14.3	15.5	24.5	24.3	49.8	26.5	23.2

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses in the value of shipments columns either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data.

[2]A major revision in the classification of products classified in industry 2834, Pharmaceutical Preparations, was introduced in 1963, and therefore, prior data, for the most part, are not comparable at the product class level.

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963

(See Appendix, Explanation of Terms)

Code	Material	Delivered cost (million dollars)	
		1967	1963
	INDUSTRY 2831.--BIOLOGICAL PRODUCTS		
	Materials, containers, and supplies, total	46.7	31.8
265011	Paperboard boxes containers	2.5	1.9
322102	Glass	3.0	3.2
970099	All other materials and components, parts, containers, and supplies consumed	32.2	24.3
976000	Materials, containers, and supplies, n.s.k.[1]	9.0	2.4
	INDUSTRY 2834.--PHARMACEUTICAL PREPARATIONS		
	Materials, containers, and supplies, total	902.8	670.9
283318	Antibiotics for human and veterinary use (excluding antibiotics for animal feed)	45.5	26.6
283317	Sulfa drugs, bulk	27.3	12.0
283301	Vitamins, natural and synthetic, bulk (excluding vitamins for animal feeds)	57.4	36.1
	Containers:		
265011	Paperboard boxes and containers	68.5	55.1
322102	Glass	86.1	73.0
340001	Metal	29.8	20.6
307940	Plastic	40.7	20.3
970099	All other materials and components, parts, containers, and supplies consumed	484.1	390.7
976000	Materials, containers, and supplies, n.s.k.[1]	63.4	36.5

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1] This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967, this includes estimates for companies that were not mailed report forms.

TABLE 7B. Fuels and Electric Energy Consumed: 1967

(See Appendix, Explanation of Terms)

Code	Item	Unit of measure	Industry		
			Biological products (SIC 2831)	Medicinals and Botanicals (SIC 2831)	Pharmaceutical preparations (SIC 2834)
	Cost of purchased fuels and electric energy, total....	Million dollars.	2.0	8.5	25.8
	Cost of purchased fuels, total.....	Million dollars.	.7	5.5	10.6
121005	Coal (anthracite, bituminous, and lignite):				
	Quantity.....	1,000 short tons	-	150.3	305.9
	Cost.....	Million dollars.	-	1.2	2.5
	Fuel oil, total:				
	Quantity.....	1,000 barrels...	50.9	1,249.8	1,314.0
	Cost.....	Million dollars.	.2	3.4	3.5
291141	Distillate:				
	Quantity.....	1,000 barrels	27.8	1,047.6	226.0
	Cost.....	Million dollars.	.1	2.9	.8
291151	Residual:				
	Quantity.....	1,000 barrels...	23.1	202.5	1,088.0
	Cost.....	Million dollars.	.1	.5	2.7
131300	Gas (natural, manufactured mixed, blast furnace, coke-oven, and other gas):				
	Quantity.....	Million cub. ft.	730.6	1,288.0	6,641.2
	Cost.....	Million dollars.	.4	.6	2.9
960011	Other fuels (gasoline, LPG, wood, etc.).....	Million dollars.	-	.2	1.1
	Fuels, NSK.....	Million dollars.	.1	.1	.6
	Purchased electric energy:				
	Quantity.....	Million kw-hrs..	95.3	316.7	1,474.2
	Cost.....	Million dollars.	1.3	3.0	15.2
	Quantity of electric energy generated less quantity sold.....	Million kw-hrs..	-	41.4	115.7
	Total energy used for heat and power[1].....	Million kw-hrs equivalent.....	505.2	4,204.4	9,126.0

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding in computer operations. See appendix, Explanation of Terms.

Standard notes: - Represent zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]Represents the quantity of purchased electric energy and the kilowatt hours equivalent of all fuels used for heat and power.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization–the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization–the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees: Number (1,000)	All employees: Payroll (million dollars)	Production workers: Number (1,000)	Production workers: Man-hours (millions)	Production workers: Wages (million dollars)	Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)
2831	BIOLOGICAL PRODUCTS										
	ENTIRE INDUSTRY	128	7.4	53.8	4.8	9.3	25.1	109.2	56.4	160.0	12.1

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

SOAP, CLEANERS, AND TOILET GOODS

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2841--Soap and Other Detergents, Except Specialty Cleaners
2842--Specialty Cleaning, Polishing, and Sanitation Preparations, Except Soap and Detergents
2843--Surface Active Agents, Finishing Agents, Sulfonated Oils and Assistants
2844--Perfumes, Cosmetics, and Other Toilet Preparations

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

2841--SOAP AND OTHER DETERGENTS, EXCEPT SPECIALTY CLEANERS

This industry comprises establishments primarily engaged in manufacturing soap, synthetic organic detergents, inorganic alkaline detergents, or any combination thereof, and establishments producing crude and refined glycerin from vegetable and animal fats and oils. Establishments primarily engaged in manufacturing shampoos or shaving products, whether from soap or synthetic detergents, are classified in industry 2844; and synthetic glycerin in industry 2818. For a detailed list of products of industry 2841, refer to table 6A, product codes 2841111 to 2841653.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Soap and Other Detergents Industry in 1967 totaled $2,593.4 million. This included shipments of soap and other detergents (primary products), valued at $1,990.2 million, shipments of other products (secondary products) valued at $405.7 million, and miscellaneous receipts of $197.5 million.

This industry's shipments of soap and other detergents (primary products) in 1967 represented 83 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 82 percent. Secondary products shipped by this industry in 1967 consisted mainly of polishes and sanitation goods ($103.5 million), and toilet preparations ($135.9 million).

Industry 2841 shipments of soap and other detergents (primary products) in 1967 represented 90 percent (coverage ratio) of these products valued at $2,200.8 million shipped by all industries. In 1963, the coverage ratio was 92 percent. Other industries shipping soap and other detergents (primary products) consisted mainly of industry 2842, Polishes and Sanitation Goods, $83.4 million; industry 2819, Industrial Inorganic Chemicals, N.E.C., $31.4 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2841, these establishments accounted for approximately 1.0 percent of payroll and 0.5 percent value added by manufacture.

2842--SPECIALTY CLEANING, POLISHING AND SANITATION PREPARATIONS, EXCEPT SOAP AND DETERGENTS

This industry comprises establishments primarily engaged in manufacturing furniture, metal, and other polishes; waxes and dressings for fabricated leather and other materials; household, institutional and industrial plant disinfectants, deodorants and exterminating products; dry cleaning preparations; and other sanitation preparations. For a detailed list of products of industry 2842, refer to table 6A, product codes 2842112 to 2842498.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Polishes and Sanitation Goods Industry in 1967 totaled $1,108.0 million. This included shipments of polishes and sanitation goods (primary products), valued at $810.4 million, shipments of other products (secondary products) valued at $199.5 million, and miscellaneous receipts of $98.1 million.

This industry's shipments of polishes and sanitation goods (primary products) in 1967 represented 80 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 82 percent. Secondary products shipped by this industry in 1967 consisted mainly of soap and other detergents ($83.4 million), and toilet preparations ($40.0 million).

Industry 2842 shipments of polishes and sanitation goods (primary products) in 1967 represented 75 percent (coverage ratio) of these products valued at $1,077.4 million shipped by all industries. In 1963, the coverage ratio was 72 percent. Other industries shipping polishes and sanitation goods (primary products) consisted mainly of industry 2842, Soap and Other Detergents, $103.5 million; and industry 2844, Toilet Preparations, $27.2 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2842, these establishments accounted for approximately 3.5 percent of payroll and 2.5 percent value added by manufacture.

2843--SURFACE ACTIVE AGENTS, FINISHING AGENTS, AND SULFONATED OILS AND ASSISTANTS

This industry comprises establishments primarily engaged in producing surface active preparations for use as wetting agents, emulsifiers, and penetrants. Establishments engaged in producing sulfonated oils and fats and related products are also included. For a detailed list of products of industry 2843, refer to table 6A, product codes 2843011 to 2843091.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Surface Active Agents Industry in 1967 totaled $294.2 million. This included shipments of surface active agents (primary products), valued at $219.1 million, shipments of other products (secondary products) valued at $59.2 million, and miscellaneous receipts of $15.9 million.

This industry's shipments of surface active agents (primary products) in 1967 represented 79 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 80 percent. Secondary products shipped by this industry in 1967 consisted mainly of industrial organic chemicals, n.e.c. ($23.9 million), and plastics materials and resins ($8.1 million).

Industry 2843 shipments of surface active agents (primary products) in 1967 represented 54 percent (coverage ratio) of these products valued at $403.2 million shipped by all industries. In 1963, the coverage ratio was 47 percent. Other industries shipping surface active agents (primary products) consisted mainly of industry 2818, Industrial Organic Chemicals, N.E.C., $49.1 million; industry 2841, Soap and Other Detergents, $33.2 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2843, these establishments accounted for approximately 1.0 percent of payroll and 1.0 percent value added by manufacture.

2844--PERFUMES, COSMETICS AND OTHER TOILET PREPARATIONS

This industry comprises establishments primarily engaged in manufacturing perfumes (natural and synthetic), cosmetics, and other toilet preparations. This industry also includes establishments primarily engaged in blending and compounding perfume bases; and those manufacturing shampoos and shaving products, whether from soap or synthetic detergents. Establishments primarily engaged in manufacturing synthetic perfume and flavoring materials are classified in industry 2818, and essential oils in industry 2899. For a detailed list of products of industry 2844, refer to table 6A, product codes 2844133 to 2844598.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Toilet Preparations Industry in 1967 totaled $2,515.6 million. This included shipments of toilet preparations (primary products), valued at $2,247.3 million, shipments of other products (secondary products) valued at $137.9 million, and miscellaneous receipts of $130.4 million.

This industry's shipments of toilet preparations (primary products) in 1967 represented 94 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 91 percent. Secondary products shipped by this industry in 1967 consisted mainly of pharmaceutical preparations ($38.1 million), and soap and other detergents ($20.5 million).

Industry 2844 shipments of toilet preparations (primary products) in 1967 represented 80 percent (coverage ratio) of these products valued at $2,794.2 million shipped by all industries. In 1963, the coverage ratio was 84 percent. Other industries shipping toilet preparations (primary products) consisted mainly of industry 2834, Pharmaceutical Preparations, $222.1 million; and industry 2841, Soap and Other Detergents, $135.9 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2844, these establishments accounted for approximately 1.0 percent of payroll and 0.6 percent value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	End-of-year inventories	Specialization ratio	Coverage ratio
	Total (number)	With 20 employees or more (number)	Number (1,000)	Payroll (million dollars)	Number (1,000)	Man-hours (millions)	Wages (million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(percent)	(percent)

Note: In 1967, 1963, and 1958, the number of companies in industry 2841 was 599, 641, and 469, respectively; in industry 2842: 965, 1,075, and (NA); industry 2843: 154, 137, and 120; and industry 2844: 628, 673, and 721. The 1967 company counts included the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. *These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e]Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees.)

[1]Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

[2]Includes an unspecified amount for plants under construction but not in operation.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Ind. code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. B+C (percent)	Total, made in all industries (million dollars)	Made in this industry (million dollars)	Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Product code	Class of products, industry, and miscellaneous receipts	All industries	Soap and other detergents (SIC 2841)	Polishes and sanitation goods (SIC 2842)	Surface active agents (SIC 2843)	Toilet preparations (SIC 2844)	Other industries

28440 00	Toilet preparations, n.s.k. (For companies with 10 or more employees. See Note.)	.....	(X)	64.4	(X)	19.6
28440 02	Toilet preparations, n.s.k. (For companies with less than 10 employees. See Note.)	.....	(X)	15.8		

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review. r Revised.

[1]DEFINITIONS OF SPECIFIED PRODUCTS:

ALKALINE DETERGENTS--Mixtures of sodium and/or phosphatic compound containing less than 5 percent synthetic organic surface active agent.

SOAPS--Products, including combinations of synthetic organic surface active agents and alkaline detergents, containing more than 25 percent anhydrous soap.

SYNTHETIC ORGANIC DETERGENTS--Mixture, including combinations of soap and alkaline detergents, containing 5 percent or more synthetic organic surface active agents.

HEAVY-DUTY DETERGENTS--Detergent products for laundry applications with a substantial phosphate builder.

LIGHT-DUTY DETERGENTS--Detergent products for hand dishwashing and for fine fabrics with little or no phosphate builder.

[2]Code 2841111 combined with code 2841121.

[3]Code 2841351 combined with code 2841398.

[4]Data on quantities of glycerin (synthetic and natural) produced are shown in Current Industrial Report, Series M20K, Fats and Oils, Production, Consumption, and Factory and Warehouse Stocks.

[5]Includes natural glycerin only. Additional data on quantities produced and quantities and value shipped for synthetic glycerin are shown in the United States Tariff Commission's annual report "Synthetic Organic Chemicals, United States Production and Sales."

[6]Code 2842341 combined with 2842398 in 1967.

[7]Includes figures for egg yoke, wetting agents, waterproofing emulsions, mordants other than tannic acid and an undetermined quantity of sizes, soaps, and synthetic detergents.

[8]Data on quantities produced and quantities and values shipped for many of the synthetic organic chemicals included in this grouping are shown in the United States Tariff Commission's annual report, "Synthetic Organic Chemicals, United States Production and Sales."

[9]Code 28444 51 included in code 28444 98.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

TABLE 6C. Product Classes–Value Shipped by All Manufacturing Establishments: 1947, 1954, 1958, 1963 to 1967

(in millions of dollars)

28440	Toilet preparations, n.s.k.	80.2	(21.3)	(22.5)	16.1	19.6	15.6	(NA)	(NA)

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes. Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses for the value of shipments either have associated standard errors exceeding 15 percent or are not consistent with other census series and related data. Thus, at the individual product level, the estimates may be of limited reliability; however, they may be combined with other product-class totals into broader aggregates which are of acceptable reliability.

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963–Continued

(See Appendix, Explanation of Terms)

Product code	Product	Delivered cost (million dollars)	
		1967	1963
	INDUSTRY 2844.--TOILET PREPARATIONS		
	Materials, containers, and supplies, total	699.4	504.7
	Containers:		
307940	Plastics	82.2	59.0
322102	Glass	80.7	72.2
260091	Paper and paperboard	81.6	55.4
340001	Metal	74.7	69.5
970099	All other materials and components, parts, containers, and supplies consumed	296.7	204.7
976000	Materials, containers, supplies, n.s.k.[1]	83.5	43.9

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.

[1]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967, this includes estimates for companies that were not mailed report forms.

TABLE 7B. Fuels and Electric Energy Consumed: 1967

(See Appendix, Explanation of Terms)

Code	Item	Unit of measure	Soap and other detergents (SIC 2841)
	Cost of purchased fuels and electric energy, total	Million dollars.	14.6
	Cost of purchased fuels, total	.....do....	9.1
121005	Coal (anthracite, bituminous, and lignite):		
	Quantity	1,000 short tons	167.8
	Cost	Million dollars.	2.0
	Fuel oil, total:		
	Quantity	1,000 barrels...	769.4
	Cost	Million dollars.	2.0
291141	Distillate:		
	Quantity	1,000 barrels...	215.7
	Cost	Million dollars.	0.6
291151	Residual:		
	Quantity	1,000 barrels...	553.7
	Cost	Million dollars.	1.4
131300	Gas (natural, manufactured mixed, blast-furnace, coke-oven, and other gas):		
	Quantity	Million cu. ft..	10,297.5
	Cost	Million dollars.	4.9
960013	Other fuels (gasoline, LPG, wood, etc.)	.....do....	0.1
	Fuels, n.s.k	.....do....	-
	Purchased electric energy:		
	Quantity	Million kw.-hrs.	468.4
	Cost	Million dollars.	5.5
	Quantity of electric energy generated less quantity sold	Million kw.-hrs.	43.4
	Total energy used for heat and power[1]	Million kw.-hrs. equivalent.....	5,884.5

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]Represents the quantity of purchased electric energy and the kilowatt hours equivalent of all fuels used for heat and power.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization--the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization--the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments	All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new
			Number	Payroll	Number	Man-hours	Wages				
		(number)	(1,000)	(million dollars)	(1,000)	(millions)	(million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

PAINTS AND ALLIED PRODUCTS; GUM AND WOOD CHEMICALS

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2851--Paints, Varnishes, Lacquers, Enamels, and Allied Products
2861--Gum and Wood Chemicals

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

This industry comprises establishments primarily engaged in manufacturing paints (in paste and ready mixed form), varnishes, lacquers, enamels, and shellac; putties and caulking compounds; wood fillers and sealers; paint and varnish removers; paint brush cleaners, and allied paint products. For a detailed list of products of industry 2851, refer to table 6A, product codes 2851111 to 2851975.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Paints and Allied Products Industry in 1967 totaled $2,911.4 million. This included shipments of paints and allied products (primary products), valued at $2,598.5 million, shipments of other products (secondary products) valued at $133.0 million, and miscellaneous receipts of $179.8 million.

This industry's shipments of paints and allied products (primary products) in 1967 represented 95 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 95 percent. Secondary products shipped by this industry in 1967 consisted mainly of plastics materials and resins ($35.5 million), and adhesives and gelatin ($13.7 million).

Industry 2851 shipments of paint and allied products (primary products) in 1967 represented 96 percent (coverage ratio) of these products valued at $2,703.8 million shipped by all industries. In 1963, the coverage ratio was 96 percent. Other industries shipping paint and allied products (primary products) consisted mainly of industry 2893, Printing Ink, $14.1 million; industry 2821, Plastics Materials and Resins, $13.4 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2851, these establishments accounted for 0.2 percent of payroll and 1.1 percent of value added by manufacture.

2861--GUM AND WOOD CHEMICALS

This industry comprises establishments primarily engaged in manufacturing hardwood and softwood distillation products, wood and gum naval stores, charcoal, natural dyestuffs, and natural tanning materials.

Establishments primarily engaged in manufacturing synthetic tanning materials are classified in industry 2818, synthetic dye in industry 2815, and synthetic organic chemicals in industry 2818. For a detailed list of products of industry 2861, refer to table 6A, product codes 2861113 to 2861295.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Gum and Wood Chemicals Industry in 1967 totaled $215.9 million. This included shipments of gum and wood chemicals (primary products), valued at $155.9 million, shipments of other products (secondary products) valued at $56.3 million, and miscellaneous receipts of $3.8 million.

This industry's shipments of gum and wood chemicals (primary products) in 1967 represented 73 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 74 percent. Secondary products shipped by this industry in 1967 consisted mainly of adhesives and gelatin and agricultural chemicals.

Industry 2861 shipments of gum and wood chemicals (primary products) in 1967 represented 76 percent (coverage ratio) of these products valued at $205.1 million shipped by all industries. In 1963, the coverage ratio was 77 percent. Other industries shipping gum and wood chemicals (primary products) consisted mainly of industry 2631, Paperboard Mills, $24.1 million; and industry 2621, Papermills, Except Building Paper, $8.1 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2861, these establishments accounted for 2.4 percent of payroll and 2.5 percent of value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	End-of-year inventories	Specialization ratio	Coverage ratio

Note: In 1967, 1963, and 1958, the number of companies in industry 2851 was 1,459, 1,579, respectively (1958 count is not available); in industry 2861: 172, 229, and 178. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: -Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (*) These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated.

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250 to 499 employees
CC - 500 to 999 employees
EE - 1,000 to 2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

TABLE 3. Detailed Statistics: 1967

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. [e] Over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees.)

[1] Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Ind. code	Industry and census year	Value of shipments: Total (million dollars)	Value of shipments: Primary products (million dollars)	Value of shipments: Secondary products (million dollars)	Value of shipments: Miscellaneous receipts (million dollars)	Value of shipments: Primary product specialization ratio Col. B / Col. B+C (percent)	Value of primary product shipments: Total, made in all industries (million dollars)	Value of primary product shipments: Made in this industry (million dollars)	Value of primary product shipments: Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)
		A	B	C	D	E	F	G	H	I
2851	Paints and allied products.....1967..	2,911.4	2,598.5	133.0	179.8	95	2,703.8	2,598.5	105.4	96

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Product class code	Class of products, industry and miscellaneous receipts	All industries	Paint and allied products (SIC 2851)	Other industries
	Total shipments and miscellaneous receipts	(X)	2,911.4	(X)
2851-	Paint and allied products	2,703.8	2,598.5	105.4
28511	Exterior oil-type trade sales paint products	329.7	325.3	4.4
28512	Exterior water-type trade sales paint products, including tinting bases	129.5	(100-200)	(under 2)

28610 00	Gum and wood chemicals, n.s.k. (For companies with 10 or more employees. See Note.)	.....	(X)	(X)	6.4	(X)	(X)	3.2
28610 02	Gum and wood chemicals, n.s.k. (For companies with less than 10 employees. See Note.)	.....	(X)	(X)	5.8			

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments are included in the code ending with "002" which is further discussed in the text. Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: -Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Under $50 thousand. (S) Does not meet publication standards.

[1]Includes estimated quantities for products listed below for which quantity data were suppressed because reported quantity did not meet publication standards.

[2]Includes an unspecified amount of trade sale automotive finishes in 1963.

[3]Data comparable with 1967 not available; included in code 2851698.

[4]Excludes data for sulfate wood turpentine.

[5]Excludes pinene reported as such.

[6]Excludes data for synthetic acetic acid and synthetic methanol for which data are complied by the U.S. Tariff Commission.

[7]Data for refined tall oil fatty acids containing 90 percent or more free fatty acids, excluding resin acids, are reported in industry 2899, Chemical Preparations, N.E.C.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments 1967	Value of shipments 1963

California....	AA	(D)

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0....	AA	$10.0 to $20.0....	EE
$2.0 to $5.0....	BB	$20.0 to $50.0....	FF
$5.0 to $10.0....	CC	$50.0 and over....	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1] This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

TABLE 6C. Product Classes–Quantity and Value Shipped by All Manufacturing Establishments: 1947, 1954, 1958, 1963 to 1967

(In millions of dollars)

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes.

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: -Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses in the value of shipments columns either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data.

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963

291151	Residual:			
	Quantity.....	1,000 barrels...	133	101
	Cost.....	Million dollars.	.4	.4
131300	Gas (natural, manufactured mixed, blast-furnace, coke-oven, and other gas):			
	Quantity.....	Million cubic ft.	4,702	5,268
	Cost.....	Million dollars.	2.8	1.8
960011	Other fuels (gasoline, LPG, wood, etc.).....	...do.....	.6	3.7
	Fuels, n.s.k.....	...do.....	2.6	-
	Purchased electric energy:			
	Quantity.....	Million kw.-hrs.	623	130
	Cost.....	Million dollars.	9.8	1.7
	Quantity of electric energy generated less quantity sold.....	Million kw.-hrs.	-	65
	Total energy used for heat and power[1].....	Million kw.-hrs.	5,645	2,964

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]Represents the quantity of purchased electric energy and the kilowatt hours equivalent of all fuels used for heat and power.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization—the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization—the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees: Number (1,000)	All employees: Payroll (million dollars)	Production workers: Number (1,000)	Production workers: Man-hours (millions)	Production workers: Wages (million dollars)	Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Under 50 thousand (or under 50 employees).

AGRICULTURAL CHEMICALS

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2871--Fertilizers
2872--Fertilizers, Mixing Only
2879--Agricultural Pesticides, and Other Agricultural Chemicals, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

2871--AGRICULTURAL CHEMICALS

This industry comprises establishments primarily engaged in manufacturing mixed fertilizers (mixtures containing nitrogen, phosphoric acid (P_2O_5) or potash), from one or more fertilizer materials produced in the same establishment. Sulfuric, phosphoric, and nitric acid plants operated in conjunction with fertilizer plants and separately reported are classified in industry 2819. When separate reports are not available these acid plants are classified in this industry. Establishments engaged in manufacturing urea are classified in industry 2818. For a detailed list of products of industry 2871, refer to table 6A, product codes 2871115 to 2871285.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Fertilizers Industry in 1967 totaled $1,196.9 million. This included shipments of fertilizers (primary products), valued at $933.6 million, shipments of other products (secondary products) valued at $154.6 million, and miscellaneous receipts of $108.8 million.

This industry's shipments of fertilizers (primary products) in 1967 represented 86 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 89 percent. Secondary products shipped by this industry in 1967 consisted mainly of industrial inorganic chemicals, n.e.c. ($145.5 million).

Industry 2871 shipments of fertilizers $933.6 (primary products) in 1967 represented 95 percent (coverage ratio) of these products valued at $982.8 million shipped by all industries. In 1963, the coverage ratio was 97 percent. Other industries shipping fertilizers (primary products) consisted mainly of industry 2819, Industrial Inorganic Chemicals, N.E.C., $33.8 million; and industry 2872, Fertilizers, Mixing Only, $12.4 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2871, these establishments accounted for 0.0 percent of payroll and value added by manufacture.

2872--FERTILIZERS, MIXING ONLY

This industry comprises establishments primarily engaged in mixing fertilizers from purchased fertilizer materials. For a detailed list of products of industry 2872, refer to table 6A, product codes 2872213 to 2872278.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Fertilizers, Mixing Only, Industry in 1967 totaled $731.1 million. This included shipments of fertilizers, mixing only (primary products), valued at $570.1 million, shipments of other products (secondary products) valued at $23.5 million, and miscellaneous receipts of $137.5 million.

This industry's shipments of fertilizers, mixing only (primary products) in 1967 represented 96 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 94 percent. Secondary products shipped by this industry in 1967 consisted mainly of fertilizers ($12.4 million), and industrial inorganic chemicals, n.e.c. ($0.6 million).

Industry 2872 shipments of fertilizers mixing only $570.1 (primary products) in 1967 represented 97 percent (coverage ratio) of these products valued at $588.2 million shipped by all industries. In 1963, the coverage ratio was 96 percent. Other industries shipping fertilizers, mixing only (primary products) consisted mainly of industry 2879, Agricultural Chemicals, N.E.C., $4.8 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2872, these establishments accounted for 3 percent of payroll and 2 percent of value added by manufacture.

2879--AGRICULTURAL PESTICIDES, AND OTHER AGRICULTURAL CHEMICALS, NOT ELSEWHERE CLASSIFIED

This industry comprises establishments primarily engaged in the formulation and preparation of ready-to-use agricultural pest control chemicals, including insecticides, fungicides, and herbicides from technical chemicals or concentrates; and the production of concentrates which require further processing before use as agricultural pesticides. This industry also includes establishments primarily engaged in manufacturing or formulating agricultural chemicals, not elsewhere classified, such as minor or trace elements and soil conditioners. Establishments primarily engaged in manufacturing basic or technical agricultural pest control chemicals including insecticides, fungicides, and herbicides such as lead and calcium arsenates, copper sulfate, DDT, BHC, 2, 4-D

carbamates, etc., are classified in Group 281. Establishments primarily engaged in manufacturing household or industrial pesticides are classified in industry 2842, and agricultural lime products in Major group 32. For a detailed list of products of industry 2879, refer to table 6A, product codes 2879010 to 2879098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Agricultural Chemicals, N.E.C., Industry in 1967 totaled $817.0 million. This included shipments of agricultural chemicals, n.e.c. (primary products), valued at $598.5 million, shipments of other products (secondary products) valued at $88.4 million, and miscellaneous receipts of $130.1 million.

This industry's shipments of agricultural chemicals, n.e.c. (primary products) in 1967 represented 87 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 87 percent. Secondary products shipped by this industry in 1967 consisted mainly of industrial organic chemicals ($14.9 million), and chemical preparations, n.e.c. ($13.0 million).

Industry 2879 shipments of Agricultural Chemicals, N.E.C. (primary products) in 1967 represented 72 percent (coverage ratio) of these products valued at $834.3 million shipped by all industries. In 1963, the coverage ratio was 69 percent. Other industries shipping Agricultural Chemicals, N.E.C. (primary products) consisted mainly of industry 2818, Industrial Organic Chemicals, N.E.C., $107.1 million; and industry 2819, Industrial Inorganic Chemicals, N.E.C., $22.4 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2879, these establishments accounted for 1 percent of payroll and 0.6 percent of value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967

Note: In 1967, 1963, and 1958, the number of companies in industry 2871 was 85, 145, and (NA), respectively; in industry 2872: 496, 537, and (NA); industry 2879: 223, 241, and (NA). The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. * These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated.

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. - Represents zero. (X) Not applicable. (NA) Not available. [e] For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees.)

[1] Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

[2] Includes an unspecified amount for plants under construction but not in operation.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Ind. code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. B+C (percent)	Total, made in all industries (million dollars)	Made in this industry (million dollars)	Made in other industries (million dollars)	Coverage ratio Col. B / Col. F (percent)
		A	B	C	D	E	F	G	H	I
2871	Fertilizers.....1967..	1,196.9	933.6	154.6	108.8	86	982.8	933.6	49.2	95
	1963..	869.2	702.5	85.3	81.4	89	727.9	702.5	25.4	97
2872	Fertilizers, mixing only.....1967..	731.1	570.1	23.5	137.5	96	588.2	570.1	18.1	97

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Product code	Class of products, industry, and miscellaneous receipts	All industries	Fertilizers (SIC 2871)	Fertilizers, mixing only (SIC 2872)	Agricultural chemicals, n.e.c. (SIC 2879)	Other industries
	Total shipments and miscellaneous receipts	(X)	1,196.9	731.1	817.0	(X)
2871-	Fertilizers	982.8	933.6	12.4	under 2	(20-50)
	Superphosphate and other phosphatic fertilizer materials	542.0	510.0	-	-	32.0
28712	Mixed fertilizers (from phosphatic fertilizer materials produced in same establishment and fertilizer materials of organic orgin)	435.9	422.6	9.4	under 2	(2-5)

28722 02	Fertilizers, mixing only, n.s.k. (For companies with less than 10 employees. See Note.)	(X)	(X)	16.8			

See footnotes at end of table.

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	1967			1963		
		Production for all purposes (million pounds)	Total shipments, including interplant transfers		Production for all purposes (million pounds)	Total shipments, including interplant transfers	
			Quantity (million pounds)	Value (million dollars)		Quantity (million pounds)	Value (million dollars)
2879- --	AGRICULTURAL CHEMICALS, N.E.C., TOTAL	(X)	(X)	834.3	(X)	(X)	488.7
	Insecticidal and other fungicidal preparations (formulations) primarily for agricultural use, excluding aerosols and fly sprays:						
28790 10	Arsenic compounds (calcium and lead arsenate)	(X)	(X)	1.4	5.6	4.9	1.5
28790 13	Arsenical insecticides and fungicides, including paris green and other copper arsenicals or mixtures containing arsenicals and excluding weed killers	(NA)	(NA)	3.8	(NA)	(NA)	3.6
28790 15	Sulfur containing preparations, including wettable sulfur, sulfur dust, and lime sulfur	(NA)	236.9	10.7	202.9	193.9	9.5
28790 32	Benzene hexachloride and/or lindane preparations without DDT	(NA)	(NA)	2.2	(NA)	(NA)	4.1
	DDT-containing preparations:						
28790 33	Preparations containing DDT as the active ingredient	(NA)	154.7	23.6	192.0	181.7	25.8
28790 35	Preparations of DDT and other toxicants	(NA)	70.0	13.5	156.3	153.8	23.2
28790 39	Chlorinated hydrocarbon pesticidal preparations other than those containing benzene hexachloride or DDT	(NA)	228.2	70.7	308.4	298.6	68.8
	Organic phosphate-containing preparations:						
28790 43	Preparations containing parathion as the active ingredient	(NA)	37.3	12.1			
28790 45	Preparations containing methyl parathion as the active ingredient	(NA)	49.3	23.7	219.8	204.6	59.7
28790 47	Preparations containing other organic phosphates as the active ingredient	(NA)	152.4	64.1			
28790 49	Other agricultural insecticidal preparations and/or concentrates, including petroleum oil sprays and emulsions without other toxicants, excluding botanicals	(NA)	410.2	125.6	(NA)	(NA)	60.7
28790 61	Botanical preparations and/or concentrates for agricultural use	(NA)	30.6	7.3	(NA)	(NA)	0.8
28790 65	Seed treatment compounds (insecticides, fungicides, and innoculants)	(NA)	30.0	10.5	20.9	20.5	7.7
28790 67	Copper-containing dry preparations, including dry bordeaux mixture, excluding paris green and copper sulfate	(NA)	23.7	6.3	19.8	19.0	3.1
28790 69	Other fungicidal preparations for agricultural use	(NA)	81.1	31.8	76.9	75.9	25.1
28790 71	Soil fumigants	(NA)	60.1	13.5	30.7	29.2	7.8
	Herbicidal preparations:						
28790 81	Sodium arsenite	(NA)	11.6	1.5	24.5	25.0	2.3
28790 82	Sodium chlorate preparations	(NA)	18.8	3.6	67.0	57.7	10.6
28790 83	2; 4-D, (2; 4-dichlorophenoxyacetic acid) and derivatives	(NA)	(NA)	46.4	(NA)	(NA)	25.6
28790 84	2; 4; 5-trichlorophenoxyacetic acid and derivatives	(NA)	(NA)	24.7	(NA)	(NA)	12.8
28790 85	Defoliants (except sodium chlorate preparations)	(NA)	(NA)	5.0			
28790 86	Desiccants (including arsenic acid)	(NA)	7.1	1.4			
28790 87	Plant growth regulators	(NA)	(NA)	2.8	192.3	186.1	67.8
28790 88	Carbamates (including CIPC, EPTC, CDAA, etc.)	(NA)	(X)	22.8			
28790 89	Other weed killers (hydrocarbon, etc.) including defoliants, desiccants, algaecides, etc	(NA)	(NA)	217.9			
28790 98	Agricultural chemicals, n.e.c., such as disinfectants, animal dips, and soil conditioners	(NA)	(NA)	5.8	(NA)	(NA)	21.3
28790 00	Agricultural pesticides and other agricultural chemicals, n.s.k. (Represents principally establishments of companies with 10 employees or more in 1967. See Note.)	(X)	(X)	75.3			
28790 02	Agricultural pesticides and other agricultural chemicals, n.s.k. (Represents principally establishments of companies with fewer than 10 employees in 1967. See Note.)	(X)	(X)	6.2	(X)	(X)	46.8

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5-digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5-digits) followed by "00," or in some cases to the appropriate product group code (4-digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]For quantity data showing production, shipments, plant consumption and stocks published on a monthly basis for intercensal years and 1967 for product codes 28711 15, 28711 41, 28711 61, see Current Industrial Reports Series M28D, Superphosphate and Other Phosphatic Fertilizer Materials.

[2]Production data include 18,696 short tons of P_2O_5 for 1963 reported by Tennessee Valley Authority.

[3]Production data include 32,702 short tons of P_2O_5 for 1963 reported by Tennessee Valley Authority.

[4]Production data include 41,812 short tons of P_2O_5 for 1963 reported by Tennessee Valley Authority.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Product class and geographic area	Value of shipments	
	1967	1963
SUPERPHOSPHATE, OTHER PHOSPHATIC FERTILIZERS (28711)

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1] This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

TABLE 6C. Product Classes–Quantity and Value Shipped by All Manufacturing Establishments: 1947, 1954, 1958, 1963 to 1967

(In millions of dollars)

Code	Product class	1967	1966[1]	1965[1]	1964[1]	1963	1958	1954	1947
2871	Fertilizers	982.8	947.2	856.0	820.5	727.9	[2]883.3	(NA)	(NA)
28711	Superphosphate, other phosphatic fertilizers	542.0	462.9	416.0	394.2	321.5	[3]153.6	131.3	85.5
28712	Mixed fertilizers (materials produced at establishment)	435.9	484.3	440.0	426.3	406.4	[3]724.3	(NA)	(NA)
28710	Fertilizers, n.s.k	4.9	-	-	-	-	[2]5.4	(NA)	(NA)
28722	Fertilizer, mixing only	588.2	611.4	578.4	518.7	492.7	([4])	(NA)	(NA)
28790	Agricultural pesticides, other chemicals	834.3	672.8	581.6	508.5	488.7	347.6	(NA)	(NA)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See appendix, "Explanation of Terms."

Standard notes: - Represents zero. (NA) Not available.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, therefore, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses in the value of shipments columns either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data.

[2]Data for 2871 primary products shipments for 1958 include value figures for product classes 28722 and 28710.

[3]For 1958 data for ammonium phosphates and other chemically processed phosphatic fertilizer materials were included in complete or incomplete mixtures, code 28712.

[4]Data for product class 28722 combined with product class 28712 for 1958.

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963

976000	Materials, containers, supplies, n.s.k.....	.....	.....	(X)	[6]88.1	(X)	[2]74.0

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (S) Withheld because the estimate did not meet publication standards, either on the basis of the associated standard error of estimate or on the basis of a consistency review.

[1]Code 281914, code 281826, code 200011, and code 239300 combined with code 970099 for 1967.

[2]587.0 thousand short tons (100% P_2O_5) of normal and enriched superphosphate were consumed by producing plants.

[3]136.6 thousand short tons (100% P_2O_5) of concentrated superphosphate were consumed by producing plants.

[4]8,527.1 thousand short tons (100% H_2SO_4) of sulfuric acid, except spent, were produced and consumed by plants classified in industry 2871, Fertilizers.

[5]2,754.4 thousand short tons (100% P_2O_5) of phosphoric acid, were produced and consumed by plants classified in industry 2871, Fertilizers.

[6]This item represents the total cost of materials for establishments that did not report detailed materials data. For 1967, this includes estimates for companies that were not mailed report forms.

[7]Code 281975 and code 147501 combined with code 970099 for 1967.

TABLE 7B. Fuels and Electric Energy Consumed: 1967

(See Appendix, Explanation of Terms)

Code	Item	Unit of measure	Fertilizers (SIC 2871)	Fertilizers mixing only (SIC 2872)
	Cost of purchased fuels and electric energy, total....	Million dollars.	31.1	5.5
	Cost of purchased fuels, total.....	...do.....	13.4	2.6
	Fuel oil, total:			
	Quantity.....	1,000 barrels...	507.2	82.6
	Cost.....	Million dollars.	1.5	0.4
291141	Distilled:			
	Quantity.....	1,000 barrels...	210.2	71.7
	Cost.....	Million dollars.	0.8	0.4
291151	Residual:			
	Quantity.....	1,000 barrels...	297.0	10.8
	Cost.....	Million dollars.	0.7	0.1
131300	Gas (natural):			
	Quantity.....	Million cu. ft..	26,323.6	2,494.0
	Cost.....	Million dollars.	8.8	0.8
	Other fuels (gasoline, LPG, wood, etc.).....	Million dollars.	2.0	0.4
	Fuels, NSK.....	Million dollars.	1.1	0.9
	Purchased electric energy:			
	Quantity.....	Million kw.-hrs.	2,153.0	140.9
	Cost.....	Million dollars.	17.7	2.9
	Quantity of electric energy generated less quantity sold.....	Million kw.-hrs.	58.5	-
	Total energy used for heat and power[1].....	Million kw.-hrs equivalent.....	13,277.1	2,063.6

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations

Standard notes: - Represents zero.
[1]Represents the quantity of purchased electric energy and the kilowatt hours equivalent of all fuels used for heat and power.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization--the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization--the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees: Number (1,000)	All employees: Payroll (million dollars)	Production workers: Number (1,000)	Production workers: Man-hours (millions)	Production workers: Wages (million dollars)	Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)
2871	FERTILIZERS										
	ENTIRE INDUSTRY	213	20.8	129.2	15.2	32.2	86.1	434.1	783.7	1 196.9	133.1
	ESTABLISHMENTS WITH 75% OR MORE SPECIALIZATION.	187	16.9	98.9	12.4	26.0	67.3	263.0	585.8	834.9	62.9
28711	SUPERPHOSPHATE, OTHER PHOSPHATIC FERTILIZERS (PRIMARY PRODUCT CLASS OF ESTABLISHMENT).	51	9.0	63.8	6.8	14.4	44.3	245.5	382.2	607.5	74.1
	ESTABLISHMENTS WITH 75% OR MORE SPECIALIZATION.	34	6.4	44.7	4.9	10.4	31.1	179.6	277.2	439.2	52.6
28712	MIXED FERTILIZERS (MATERIALS PRODUCED AT ESTAB) (PRIMARY PRODUCT CLASS OF ESTABLISHMENT).	153	11.7	64.5	8.3	17.5	41.3	187.7	399.6	586.6	16.3
	ESTABLISHMENTS WITH 75% OR MORE SPECIALIZATION.	124	8.5	43.5	6.1	12.5	28.5	101.0	288.9	391.9	10.7
2872	FERTILIZERS, MIXING ONLY										
	ENTIRE INDUSTRY	721	13.4	70.6	8.9	17.8	37.5	195.3	535.7	731.1	18.0
	ESTABLISHMENTS WITH 75% OR MORE SPECIALIZATION.	694	12.7	66.4	8.5	16.9	35.8	184.0	509.2	693.4	15.8
2879	AGRICULTURAL CHEMICALS, NEC										
	ENTIRE INDUSTRY	346	14.3	104.4	8.6	16.8	51.2	439.7	512.9	934.1	58.9
	ESTABLISHMENTS WITH 75% OR MORE SPECIALIZATION.	318	9.5	65.9	5.7	11.1	31.7	337.2	368.0	685.4	52.0

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fraction of thousands (rather than rounding) in computer operations. See Appendix, Explanation of terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

MISCELLANEOUS CHEMICAL PRODUCTS

This report shows 1967 Census of Manufactures statistics for establishments classified in each of the following industries:

SIC Code and Title

2891--Adhesives and Gelatin
2892--Explosives
2893--Printing Ink
2895--Carbon Black
2899--Chemicals and Chemical Preparations, Not Elsewhere Classified

The general statistics (employment, payrolls, value of shipments, cost of materials, inventories, etc.) are reported for each establishment as a whole. Aggregates of such data for an industry reflect not only the primary activities of the establishments in the industry, but also their activities in the manufacture of secondary products and, for that matter, their miscellaneous activities (contract work on materials owned by others, repair work, etc.). This fact should be taken into account in comparing industry statistics (tables 1 to 4) with product statistics (table 6A) showing shipments by all industries of the primary products of the specified industry. The extent of the "product mix" is indicated in table 5A which shows the value of primary and secondary products shipped by establishments classified in the specified industry and also the value of primary products of the industry shipped as secondary products by establishments classified in other industries.

2891--ADHESIVES AND GELATIN

This industry comprises establishments primarily engaged in manufacturing gelatin and industrial and household adhesives, glues, sizes, and cements from vegetable, animal, or purchased synthetic plastics materials. Establishments primarily engaged in manufacturing dessert preparations based on gelatin are classified in industry 2099; vegetable gelatin or agar-agar in industry 2833; rubber cement in industry 3069; and asbestos cement in industry 3292. For a detailed list of products of industry 2891, refer to table 6A, product codes 2891111 to 2891298.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Adhesives and Gelatin Industry in 1967 totaled $473.6 million. This included shipments of adhesives and gelatin (primary products), valued at $376.6 million, shipments of other products (secondary products) valued at $72.4 million, and miscellaneous receipts of $24.7 million.

This industry's shipments of adhesives and gelatin (primary products) in 1967 represented 84 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 83 percent. Secondary products shipped

by this industry in 1967 consisted mainly of plastics materials and resins ($18.7 million), and fabricated rubber products, n.e.c. ($8.5 million).

Industry 2891 shipments of adhesives and gelatin (primary products) in 1967 represented 77 percent (coverage ratio) of these products valued at $490.3 million shipped by all industries. In 1963, the coverage ratio was 72 percent. Other industries shipping adhesives and gelatin (primary products) consisted mainly of industry 2861, Gum and Wood Chemicals, and industry 2851, Paints and Allied Products.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2891, these establishments accounted for approximately 1.2 percent of payroll and 1.1 percent value added by manufacture.

2892--EXPLOSIVES

This industry comprises establishments primarily engaged in manufacturing explosives such as sporting powder, blasting powder, high explosives, nitrated carbohydrates, safety fuses, and blasting and detonating caps. Included in this industry are government-owned plants operated by private firms for the account of the Federal Government. Establishments primarily engaged in manufacturing ammunition for small arms are classified in group 196, and fireworks and pyrotechnics such as flares (all kinds) and railroad torpedoes, in industry 2899. Establishments primarily engaged in shooting wells and also engaged in manufacturing nitroglycerine are included in the census of minerals. For a detailed list of products of industry 2892, refer to table 6A, product codes 2892113 to 2892171.

The code number as well as the definition of this industry was unchanged between 1963 and 1967.

The data include information for government-owned plants operated by private firms for the account of the Federal Government, but exclude information for government-owned and government-operated plants. Since the capital expenditures made by these privately operated government plants are paid for by current billings to the U.S. Government, these amounts are excluded from the statistics shown in this report which represent expenditures for privately owned facilities. The detailed product statistics appearing in table 6A represent only the amounts and type of explosives produced by privately owned and privately operated plants. On the other hand, the data for materials consumed (table 7A) include figures for all plants classified in this industry.

Value of shipments and other receipts of the Explosives Industry in 1967 totaled $647.0 million. This included shipments of explosives (primary products), valued at $229.8 million, shipments of other products (secondary products) valued at $16.7 million, and miscellaneous receipts, including value of explosives produced in government-owned, contractor operated plants, of $400.9 million.

This industry's shipments of explosives (primary products) in 1967 represented 93 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 88 percent. Secondary products shipped by this industry in 1967 consisted mainly of industrial inorganic chemicals ($10.9 million), and chemical preparations, n.e.c. ($4.1 million).

Industry 2892 shipments of explosives (primary products) in 1967 represented 93 percent (coverage ratio) of these products valued at $248.5 million shipped by all industries. In

1963, the coverage ratio was 94 percent. Other industries shipping explosives (primary products) consisted mainly of industry 2818, Industrial Organic Chemicals, N.E.C., and industry 2899, Chemical Preparations, N.E.C.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2892, these establishments accounted for approximately 0.0 percent of payroll and 0.0 percent value added by manufacture.

2893--PRINTING INK

This industry comprises establishments primarily engaged in manufacturing printing ink, gravure ink, screen process ink, and lithographic ink. For a detailed list of products of industry 2893, refer to table 6A, product codes 2893003 to 2893098.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Printing Ink Industry in 1967 totaled $375.6 million. This included shipments of printing ink (primary products), valued at $324.4 million, shipments of other products (secondary products) valued at $25.0 million, and miscellaneous receipts of $26.2 million.

This industry's shipments of printing ink (primary products) in 1967 represented 93 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 93 percent. Secondary products shipped by this industry in 1967 consisted mainly of paints and allied products and cyclic intermediates and crudes.

Industry 2893 shipments of printing ink (primary products) in 1967 represented 95 percent (coverage ratio) of these products valued at $342.6 million shipped by all industries. In 1963, the coverage ratio was 92 percent. Other industries shipping printing ink (primary products) consisted mainly of industry 2851, Paints and Allied Products, $8.4 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2893, these establishments accounted for approximately 1.0 percent of payroll and 1.0 percent value added by manufacture.

2895--CARBON BLACK

This industry comprises establishments primarily engaged in manufacturing carbon black (channel and furnace black).

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Carbon Black Industry in 1967 totaled $167.8 million. This included shipments of carbon black (primary products), valued at $167.2 million, and miscellaneous receipts of $.5 million.

This industry's shipments of carbon black (primary products) in 1967 represented 100 percent (specialization ratio) of its total product shipments (primary and secondary).

The total value of carbon black shipped by all producers in 1967 was $168.0 million of which more than 99 percent, were shipped by plants classified in industry 2895, Carbon Black.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2895, these establishments accounted for approximately 0.0 percent of payroll and 0.0 percent value added by manufacture.

2899--CHEMICAL PREPARATIONS, N.E.C.

This industry comprises establishments primarily engaged in manufacturing miscellaneous chemical preparations, not elsewhere classified, such as fatty acids, essential oils, bluing, laundry sours, writing and stamp pad inks; industrial compounds, such as boiler and heat insulating compounds, metal, oil and water treating compounds, waterproofing compounds and chemical supplies for foundries. For a detailed list of products of industry 2899, refer to table 6A, product codes 2899211 to 2899398.

The code number as well as the definition of this industry was unchanged between 1967 and 1963.

Value of shipments and other receipts of the Chemical Preparations, N.E.C., Industry in 1967 totaled $1,381.6 million. This included shipments of chemical preparations, n.e.c., (primary products), valued at $1,054.2 million, shipments of other products (secondary products) valued at $224.6 million, and miscellaneous receipts of $102.7 million.

This industry's shipments of chemical preparations, n.e.c. (primary products) in 1967 represented 82 percent (specialization ratio) of its total product shipments (primary and secondary). The industry specialization ratio in 1963 was 82 percent. Secondary products shipped by this industry in 1967 consisted mainly of industrial organic chemicals, n.e.c. ($51.1 million), and soaps and other detergents ($16.1 million).

Industry 2899 shipments of chemical preparations, n.e.c. (primary products) in 1967 represented 74 percent (coverage ratio) of these products valued at $1,431.6 million shipped by all industries. In 1963, the coverage ratio was 71 percent. Other industries shipping chemical preparations, n.e.c. (primary products) consisted mainly of industry 2818, Industrial Organic Chemicals, N.E.C., $81.5 million; industry 2819, Industrial Inorganic Chemicals, N.E.C., $32.6 million.

As indicated in the introduction, small establishments generally with less than 10 employees were excluded from the mail portion of the census. For these establishments, key data on payrolls and sales were obtained from administrative records of other Government agencies and the remaining statistics estimated from industry averages. For industry 2899, these establishments accounted for approximately 2.0 percent of payroll and 2.4 percent value added by manufacture.

TABLE 1A. General Statistics: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Establishments		All employees		Production workers			Value added by manufacture	Cost of materials	Value of shipments	Capital expenditures, new	End-of-year inventories	Specialization ratio	Coverage ratio

Note: In 1967, 1963, and 1958, the number of companies in industry 2891 was 247, 294, and 234, respectively; in industry 2892: 37, 41, and 45; industry 2893: 207, 216, and 193; industry 2895: 11, 8, and 8; industry 2899: 1,275, 1,312, and 1,242. The 1967 company counts include the small companies whose data were estimated from administrative records. The number of such companies is shown in table 4.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companes. * These figures either have associated standard errors exceeding 15 percent or are not consistent with other Census series and related data. Thus, these estimates may be of limited reliability.

[1]Based on a representative sample of establishments canvassed in the annual survey of manufactures (ASM). These estimates may differ from the results of a complete canvass of all manufacturing establishments. The percentage standard errors are shown in the ASM volume.

[2]Data prior to 1958 appear in Volume II, 1963 Census of Manufactures, in table 1 of the chapter devoted to this industry.

TABLE 1B. Selected Operating Ratios: 1958 to 1967

(See Appendix, Explanation of Terms)

Year	Payroll per employee (dollars)	Production worker as percent of total employment (percent)	Annual man-hours of production workers (number)	Average hourly earnings of production workers (dollars)	Cost of materials per dollar of shipments (dollars)	Cost of materials and payrolls per dollar shipments (dollars)	Value added per employee (dollars)	Payrolls as percent of value added (percent)	Value added per man-hour of production worker (dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]This State or division was not shown as a separate line in table 2 in the 1963 report for this industry. A footnote to table 2 in the 1963 report showed the number of establishments and total employment (either actual or in size ranges) for such States.

TABLE 3. Detailed Statistics: 1967

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms for discussion of items.

Standard notes: (D) Withheld to avoid disclosing figures for individual companies. Data for this item are included in the underscored figures above. (X) Not applicable. (NA) Not available. [e] For 1967, over 30 percent of the data for this line was estimated. - Represents zero.

[1] Report forms were not mailed to companies that operated only one establishment and which Social Security payrolls indicated had fewer than 10 employees. Actual payrolls (and sales) for 1967 were obtained from administrative records of the Federal Government. The other statistics for these establishments were estimated from industry averages.

[2] Includes an unspecified amount for plants under construction but not in operation.

TABLE 5A. Industry-Product Analysis—Industry and Primary Product Shipments; Specialization Ratios and Coverage Ratios: 1967 and 1963

An establishment is assigned to an industry based on the shipment values of products representing the largest amount considered as primary to an industry. Frequently the establishment shipments comprise mixtures of products assigned to an industry (primary products), those considered primary to other industries (secondary products of a given industry) and receipts for activities such as merchandising or contract work. This product pattern for an industry is shown in columns A through D and the primary product specialization ratio in column E. The extent to which the given industry's primary products are shipped by establishments classified in and out of the given industry is summarized in columns F through H and shown as a ratio in column I.

Ind. code	Industry and census year	Value of shipments					Value of primary product shipments			
		Total (million dollars)	Primary products (million dollars)	Secondary products (million dollars)	Miscellaneous receipts (million dollars)	Primary product specialization ratio Col. B / Col. Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms, for discussion of items.

Standard notes: - Represents zero. (NA) Not available. n.e.c. Not elsewhere classified. (D) Withheld to avoid disclosing figures for individual companies.

TABLE 5B. Industry-Product Analysis—Shipments by Product Class and Industry: 1967

In millions of dollars. This table shows where products of an industry (referred to as primary and listed in table 6A) are made and what products are made by establishments classified in an industry. Read down an industry column to find what products are produced in an industry. Read across to determine where the products of the industries in this chapter are produced. To the extent that some of the primary products are made by industries not included in this chapter, the value of such shipments is shown in the "other industries" column. The specific other industries are listed at the end of the table if they account for more than $2 million of the products primary to this chapter.

Product code	Class of products, industry, and miscellaneous receipts	All industries	Adhesives and gelatin (2891)	Explosives (2892)	Printing ink (2893)	Carbon black (2895)	Chemical preparations, n.e.c. (2899)	Other industries

TABLE 6A. Products and Product Classes–Quantity and Value of Shipments by All Producers: 1967 and 1963–Continued

(Includes quantity and value of the products reported not only by establishments classified in this industry, but also by establishments classified in other industries, and shipping these products as "secondary" products. See Appendix, Explanation of Terms, "Value of shipments")

Product code	Product	Unit of measure	1967			1963		
			Production for all purposes (quantity)	Total shipments, including interplant transfers		Production for all purposes (quantity)	Total shipments, including interplant transfers	
				Quantity	Value (million dollars)		Quantity	Value (million dollars)
	CHEMICAL PREPARATIONS, N.E.C.--Continued							
	Essential oils, fireworks, and pyrotechnics, and chemicals and chemical preparations, n.e.c.--Con.							
28993 00	Other essential oils, fireworks, and pyrotechnics, and chemicals and chemical preparations, n.e.c., n.s.k.	.....	(X)	(X)	52.8	(X)	(X)	27.8
28990 00	Chemicals and chemical preparations, n.e.c., n.s.k. (For companies with more than 10 employees. See Note.)	.....	(X)	(X)	93.2	(X)	(X)	41.2
28990 02	Chemicals and chemical preparations, n.e.c., n.s.k. (For companies with less than 10 employees. See Note.)	.....	(X)	(X)	31.4			

Note: In the 1967 Census of Manufactures, data for establishments of small companies, typically those with fewer than 10 employees, were estimated from administrative records rather than collected from respondents. These estimated shipments which are further discussed in the text are included in the code ending with "002." Such establishments were usually mailed a "short form" in the 1963 Census of Manufactures. These short forms typically provided for coding products to the product class level (5 digits) followed by "00" rather than only to the 4-digit level followed by "000." Therefore, the 1963 "n.s.k." (000) figure is not strictly comparable to the total of the two "n.s.k." (000 and 002) figures in 1967. In addition to the 1967 "n.s.k." (code 002) resulting from the above, in both the 1967 and 1963 censuses of manufactures, products which were not completely identified on the standard forms were coded to the appropriate product class code (5 digits) followed by "00," or in some cases to the appropriate product group code (4 digits) followed by "000."

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. [6]From 10 to 30 percent of this figure was estimated.

[1]Code 2891177, Mucilage and 2891143, Soybean adhesives included for 1967 in code 281179, "Other formulated and prepared adhesives."

[2]See industry 2821, Plastics Materials, for figures on synthetic resins for adhesives.

[3]The estimated value of explosives produced in goverment-owned contractor operated plants, including receipts for operation and maintenance, is included with miscellaneous receipts and thus excluded from this table. The total value of miscellaneous receipts included in the total value of shipments shown in tables 1 and 2 is $401 million in 1967 and $90 million in 1963.

[4]Excludes ammonium nitrate, field mix.

[5]Includes fuse powder and nitroglycerin sold as such.

[6]Codes 2892141 and 2892151 combined with code 2892161.

[7]Includes military detonators, jet starters, fuse and explosive assemblies, etc.

[8]For additional detail on production and shipments of channel and furnace carbon black see Minerals Yearbook published by Bureau of Mines, Department of Interior.

[9]Includes for 1967 between 50 and 100 thousand tons of evaporated salt valued at less than $5 million shipped by establishments classified in the mineral industries. Comparable 1963 data are between 50 and 80 thousand tons valued at less than $4 million. For annual information on evaporated salt, rock salt, and salt is brine see Bureau of Mines Minerals Yearbook.

[10]Excludes unspecified amount of permanent type antifreeze preparations classified as product code 28182 11, acyclic chemicals.

[11]Product code 28993 53 combined with code 28993 98.

TABLE 6B. Product Classes-Value Shipped by All Manufacturing Establishments, by Geographic Areas: 1967 and 1963

In millions of dollars. Statistics are shown for selected product classes which are economically significant and which have production that is geographically dispersed, provided that the dispersion is not approximated by the data in the geographic table for the industry (table 2) and they are not miscellaneous or "not specified by type" classes. Product class values for some States are withheld to avoid disclosing figures for individual companies. Such States are shown with a value range.

Note: Product class shipments of $1 million or more were reported but exact figures are withheld to avoid disclosing figures for individual companies. However, for such States, the values are shown in the following ranges:

Value ranges (million dollars)	Symbol	Value ranges (million dollars)	Symbol
Less than $2.0	AA	$10.0 to $20.0	EE
$2.0 to $5.0	BB	$20.0 to $50.0	FF
$5.0 to $10.0	CC	$50.0 and over	GG

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1] This State or division was not shown as a separate line in table 6D in the 1963 report for this industry. A footnote to the 1963 table 6D showed those States with $1 million or more reported shipments.

TABLE 6C. Product Classes–Value Shipped by All Manufacturing Establishments: 1947, 1954, 1958, 1963 to 1967

(In millions of dollars)

Code	Product class	1967	1966[1]	1965[1]	1964[1]	1963	1958	1954	1947
2891-	Adhesives and gelatin	490.3	484.8	446.4	397.9	386.0	288.1	(NA)	(NA)
28911	Glues, adhesives, and sizes	399.6	408.1	381.0	339.6	325.1	234.5	(NA)	(NA)
28912	Gelatin, except ready-to-eat desserts	66.2	70.4	59.5	53.5	55.4	52.0	(NA)	(NA)
28910	Adhesives and gelatin, n.s.k.	24.5	6.3	5.8	4.8	5.4	1.5	(NA)	(NA)
28921	Explosives, except government owned contract-operated plants	248.5	236.1	200.1	197.8	181.0	169.7	(NA)	(NA)
28930	Printing ink	342.6	366.8	324.4	293.6	258.2	211.5	(NA)	(NA)
28950	Carbon black (channel and furnace process only)	167.8	184.9	170.1	158.9	149.4	118.9	(NA)	(NA)
2899-	Chemical preparations, n.e.c.	1,431.7	1,345.6	1,216.6	1,111.1	998.6	738.1	(NA)	(NA)
28991	Salt	111.6	108.6	104.1	98.1	98.4	86.5	(NA)	(NA)
28992	Fatty acids	111.2	131.9	126.0	100.4	88.1	67.6	(NA)	(NA)
28993	Essential oils, fireworks and pyrotechnics, and chemicals and chemical preparations, n.e.c.	1,084.3	1,073.7	956.9	883.8	770.9	557.2	(NA)	(NA)
28990	Chemical preparations, n.s.k.	124.6	31.4	29.6	28.9	41.2	26.8	(NA)	(NA)

Note: See "Note" to table 6A for an explanation of "n.s.k." product classes.

Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

[1]These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period. The figures shown in parentheses in the value of shipments columns either have associated standard errors exceeding 15 percent or are not consistent with other census Series and related data.

TABLE 7A. Materials Consumed, by Kind: 1967 and 1963

(See Appendix, Explanation of Terms)

Code	Material	Basis	Unit of measure	Total consumption of materials (quantity)	Consumption of materials received from other establishments: Quantity	Consumption of materials received from other establishments: Delivered cost (million dollars)	Materials made and consumed in same plant

291111 960011 960013 960017	Other fuels (gasoline, LPG, wood, etc.).....	...do.....	0.4	2.1	(Z)	0.8
	Fuels, n.s.k.....	...do.....	0.6	2.1	0.1	3.3
	Purchased electric energy:					
	Quantity.....	Million kw.-hrs.	146.9	626.6	364.4	496.8
	Cost.....	Million dollars.	2.2	6.2	3.3	6.1
	Quantity of electric energy generated less quantity sold.....	Million kw.-hrs.	34.8	8.0	0.7	111.9
	Total energy used for heat and power[1].....	Million kw.-hrs. equivalent.....	3,641.9	9,580.1	5,109.6	12,425.6

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: -Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies. (Z) Less than $50 thousand dollars.

TABLE 8. General Statistics for Establishments, by Industry Specialization and Primary Product Class Specialization: 1967

This table presents selected statistics for establishments according to their degree of specialization in products primary to their industry. The measures of plant specialization shown are (1) industry specialization–the ratio of primary product shipments to total product shipments, primary plus secondary, for the establishments; and (2) product class specialization–the ratio of the largest primary product class shipments to total product shipments, primary plus secondary, for the establishment. See appendix for method of computing these ratios. Statistics for establishments with specialization ratios of less than 75 percent are included in total lines but are not shown as separate class. In addition, data may not be shown, for some industries, product classes, or specialization ratios for various reasons, e.g., to avoid disclosure of individual company data.

Industry or product class code	Industry or product class by percent of specialization	Establishments (number)	All employees: Number (1,000)	All employees: Payroll (million dollars)	Production workers: Number (1,000)	Production workers: Man-hours (millions)	Production workers: Wages (million dollars)	Value added by manufacture (million dollars)	Cost of materials (million dollars)	Value of shipments (million dollars)	Capital expenditures, new (million dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations. See Appendix, Explanation of Terms, for discussion of items.

Standard notes: - Represents zero. (X) Not applicable. (NA) Not available. (D) Withheld to avoid disclosing figures for individual companies.

Petroleum and Coal Products

29A Petroleum and coal products

This major group includes establishments primarily engaged in petroleum refining, manufacturing paving and roofing materials, and compounding lubricating oils and greases from purchased materials. Establishments manufacturing and distributing gas to consumers are classified in public utilities industries, and those primarily engaged in producing coke and byproducts in Major Group 33. Establishments primarily engaged in producing crude petroleum, natural gas, natural gasoline, and cycle condensation are classified in mining industries.

TABLE 1. General Statistics: 1967 and Earlier Years

(See Appendix, Explanation of Terms)

Item	Establishments		All employees[1]		Production workers			Value added by manufacture[2]	Cost of materials[3]	Value of shipments[3]	Capital expenditures, new[4]
	Total (number)	With 20 employees or more (number)	Number (number)	Payroll (million dollars)	Number (1,000)	Man-hours (million dollars)	Wages (million dollars)	(million dollars)	(million dollars)	(million dollars)	(million dollars)

Standard Notes: - Represents zero. (D) Withheld to avoid disclosing figures for individual companies. (NA) Not available. (X) Not applicable. r Revised.

[1] The figures for 1939 through 1967 include data for employees of manufacturing establishments who are engaged in distribution and construction work. The extent to which data for such employees are included in the figures for earlier years is not known.

[2] For the period 1954 to 1967, figures represent adjusted value added by manufacture and for earlier years, unadjusted value added. Adjusted value added is equal to value of shipments (including resales of finished products) less cost of finished products, materials, supplies, fuel, electric energy and contract work, plus the net change in the value of finished products and work-in-process inventories between the beginning and end of the year, without adjustment for price changes. Unadjusted value added is equal to value of products (excluding resales of finished products) less cost of materials, supplies, fuel, electric energy and contract work; no adjustment is made for changes in inventories of finished products and work-in-process during the year. For 1899 to 1933, cost of contract work was not subtracted from value of products in calculating value added by manufacture.

[3] The total value of shipments and cost of materials for industry groups (2- and 3-digit) include extensive duplication arising from shipments between establishments in the same industry classification. For a more complete explanation, see Introduction.

[4] The figures for 1958 to 1967 include expenditures for plants under contraction and not yet in operation.

[5] In addition to data for operating establishments 1954, 1958, 1963, and 1967 data are shown for manufacturer's central administrative offices and auxiliary units. Similar data are shown for the years 1949-1953 and 1955-1957 in annual survey of manufactures volumes. Data for these units are not available for the years prior to 1949.

[6] The 1957 edition of the Standard Industrial Classification classified beehive coke ovens and byproduct coke ovens in Major Group 33. Such establishments were previously included in Major Group 29, Petroleum and Coal Products. However, this change was reflected in the tabulations for 1955 annual surveys of manufactures. Data for 1954 were retabulated on this basis and are the source of the data labeled "Revised". Figures labeled "Original" for 1954 and data for prior years include beehive and by-product coke ovens.

[7] These figures represent estimates derived from a representative sample of manufacturing establishments canvassed in the annual survey of manufactures. These estimates, consequently, may differ from the results that would have been obtained from a complete canvass of all manufacturing establishments. The standard errors associated with these estimates are published in the annual survey of manufactures volumes for this period.

[8] The 1947 figures have been revised to exclude data for by-product coke plants operated in conjunction with public utilities manufacturing and distributing gas, and to include data for establishments primarily engaged in shipping lubricants and greases made from animal and vegetable oils (classified in Industry 2899 in 1947). The figures for 1949 to 1953 can not be revised to include these greases.

[9] Figures for years prior to 1939 exclude byproduct coke ovens owned by city gas companies. Such ovens represent less than 2 percent of the total value of products for the petroleum and coal products group for 1939.

[10] Excludes a few establishments engaged principally in blending and compounding lubricating oils.

[11] Figures for years prior to 1929 exclude lubricants, n.e.c. and paving mixtures and blocks. These industries represented 4 percent of the figure for number of production workers and 5 percent of the figure for value added by manufacture, shown for the petroleum and coal products group for 1929. Prior to 1929, the lubricants, n.e.c. industry is included in the series for chemical and allied products group.

[12] Figures for years prior to 1909 exclude fuel briquets and roofing felts and coatings. For 1909, these industries represented 6 percent of the figure for number of production workers and 9 percent of the figure for value added by manufacture shown for the petroleum and coal products group.

TABLE 2. General Statistics, by Geographic Areas: 1967 and 1963

(See Appendix, Explanation of Terms)

Code	Industry and geographic area[1]	1967											1963	
		Establishments		All employees		Production workers			Value added by manufacture (million dollars)	Cost of materials[2] (million dollars)	Value of shipments[2] (million dollars)	Capital expenditures, new (million dollars)	All employees (1,000)	Value added by manufacture (million dollars)
		Total (number)	With 20 employees or more (number)	Number (1,000)	Payroll (million dollars)	Number (1,000)	Man-hours (millions)	Wages (million dollars)

Note: Detailed figures may not add to totals because of independent rounding or independent dropping of fractions of thousands (rather than rounding) in computer operations.

Standard notes: - Represents zero. X Not applicable. NA Not available. (D) Withheld to avoid disclosing figures for individual companies. [e]For 1967, over 30 percent of the data for this line was estimated. (Z) Under 50 thousand (or under 50 employees).

[1]General statistics for some producing States have to be withheld to avoid disclosing figures for individual companies. However, for such States, the number of establishments is shown and the employment size range is indicated by one of the following symbols:

AA - less than 250 employees
BB - 250-499 employees
CC - 500-999 employees
EE - 1,000-2,499 employees
FF - 2,500 employees and over

[2]The value of shipments and cost of materials for industry groups (2- and 3-digit) includes extensive duplication arising from shipments between establishments in the same industry. For a more complete explanation, see Introduction.

TABLE 3. Detailed Statistics: 1967

Item	Petroleum and coal products (SIC 29)	Petroleum refining (SIC 291)	Paving and roofing materials (SIC 295)	Miscellaneous petroleum and coal products (SIC 299)
ESTABLISHMENTS, TOTAL ..... NUMBER	1 880	437	1 098	345
WITH 1 TO 19 EMPLOYEES ..... DO	1 176	150	805	221
WITH 20 TO 99 EMPLOYEES ..... DO	442	98	232	112
WITH 100 EMPLOYEES OR MORE ..... DO	262	189	61	12
ALL EMPLOYEES, AVERAGE FOR YEAR 1,000	141.7	106.7	26.5	8.4
PAYROLL FOR YEAR, ALL EMPLOYEES ..... MILLION DOLLARS	1 216.1	965.0	186.2	64.9
PRODUCTION WORKERS:				
AVERAGE FOR YEAR 1,000	99.2	75.6	19.0	4.8
MARCH ..... DO	95.7	74.8	16.0	4.8
